THE RETROBATES FRYOLISTE MAZE GAME

DARRAN JONES

Mr Do is borderline, so I'm going to go for Pac-Man Championship Edition. A game that shook up the genre.

Expertise:

Juggling a beautiful wife, two gergeous girls and an awardwinning magazine

Currently playing: Broforce

Favourite game of all time: Strider

NICK THORPE

I had a real soft spot for Pac-Mania as a kid - it was less frustrating because Pac-Man could jump over enemies.

Expertise:

Owning seven Master Systems Currently playing:

Home Town Story Favourite game of all time: Sonic The Hedgehog

PAUL DRURY

Phantom Slayer on the Dragon 32. It's like that terrifying Public Information Film from the Seventies warning kids about the dangers of "dark and lonely water but you can blast the Grim Reaper.

Expertise:

Parking lot parties Currently playing:

Clean Up Service (C@1)

Favourite game of all time: Sheep in Space

STEVE HOLMES

Doom obviously (if it counts). It's one of them shooty-man gun games I like, and it's in a maze.

Expertise:

Ocarina Of Time

Impressions of Sean Bean, mostly from GoldenEye Currently playing:

Wolfenstein: The New Order Fevourite game of all time: The Legend Of Zelda:

JONATHAN WELLS

Doom, even though I shouldn't have been playing at the age of five, nothing like running round corndors not knowing what waits to meet my chainsaw!

Expertise:

Tackling dirty nappies and retro spreads

Currently playing:

Lego Marvel Super Heroes Favourite game of all time: The Secret Of Monkey Island

DAVID CROOKES

Will the magic of Pac-Man ever die? Not while there are people like me who still enjoy evading the ghosts today.

Expertise:

Amstrad, Lynx, adventures,

Currently playing:

The Serpent's Curse

Favourite game of all time:

Dizzy and PlayStation (but is that retro? Debate!)

Broken Sword 5:

recently started collecting Japanese Mega Drive games. I could have saved myself some money and picked up PAL games, but I wanted the delicious artwork that often adorned my favourite games. I'm also a big sucker for game instruction books, and many of the Mega Drive efforts are truly superb.

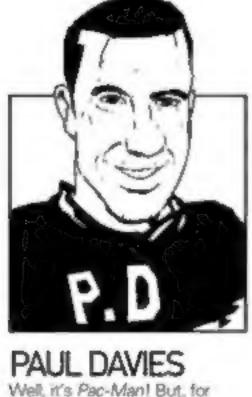

Being the person that I am, I also recently picked up an Atari Lynx and several games. While the artwork is nowhere near as impressive, I do love the fact that many of the instructions double up as mini posters, that once upon a time, I'd have been happy to stick on my wall.

What a pity then that instruction books are becoming as rare as hen's teeth in modern games. It hit me hardest when I imported Ys: Memories Of Celceta for the PS Vita (did I tell you I like to collect things?). Anyway I bought this absolutely sumptuous box set that came with all manner of pointless things that I'd never need, opened the game case and found... no instructions. Yes I know it's been happening for a while now, but it seemed such a silly omission when so much money had been spent elsewhere.

So imagine my surprise when Putty Squad

turned up complete with instruction book. Granted it was only eight pages in total, but at least it's a start.

the sake of being different I remember being really amazed by Namco's Rally X thinking games couldn't possibly become much cleverer.

Expertise:

Repeatedly banging my head against a brick wall Currently playing:

Grand Theft Auto V Favourite game of all time: Ghouls 'N' Ghosts

JASON KELK

I'm not sure if Paradroid counts as a maze game, but I'm going to say it anyway!

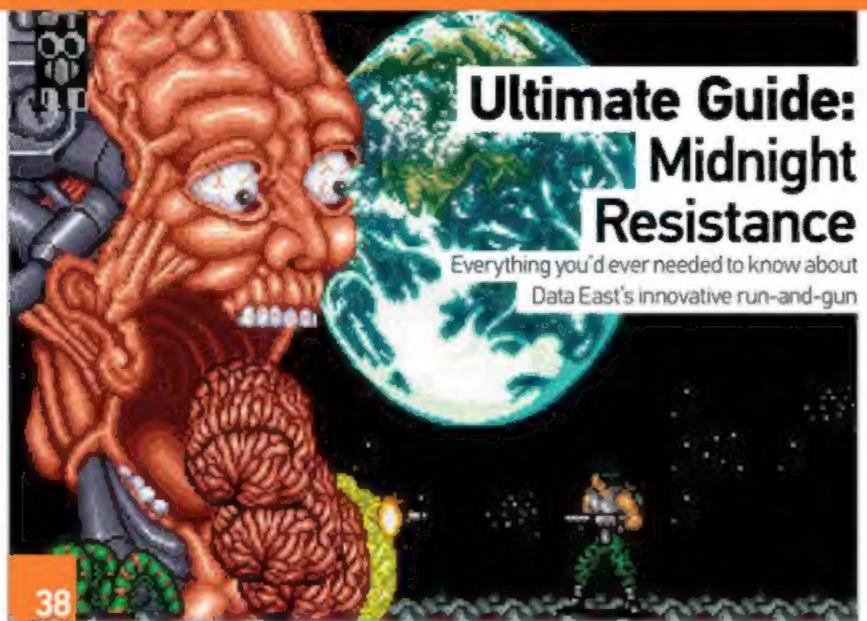

Expertise:

Making things up on the go **Currently playing:** Up 'N' Down (Apple II)

Favourite game of all time:

game was a massive bomb at retail

and because of this the studio

had millions of unsold cartridges

left on its hands. With no way of

taken out into the New Mexico

desert and buried in a landfill at

Alamogordo.

moving them, the cartridges were

It's a lovely, romantic notion - the game has also been linked to the great American videogame crash - but the reality was actually a lot different. On 28 September 1983 the New York Times ran an article that has no doubt helped fuel the infamous fable. Atari's manufacturing plant in El Paso, Texas was being converted to recycle scrap and the studio needed to find a new home for its unwanted stock. As a result 14 trucks containing videogames, console and computer parts were taken to Alamogordo, New Mexico and buried. They were steamrolled and then concrete was poured over many of the games, (which included

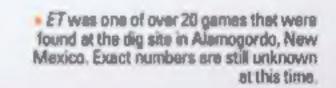

ET amongst them) and everyone moved on with their lives. The original story and its conclusion was well documented in the excellent book Atari Inc: Business Is Fun, which was written by Curt Vendel and Retro Gamer freelancer Marty Goldberg. The myth was essentially debunked.

HYPED EXCAVATION

REVEALS... NOTHING WE

DIDN'T ALREADY KNOW

It's been amusing then to see the internet go wild over the recent events that took place on 26 April. A film company called Fuel Entertainment had been funded by Microsoft Entertainment Studios to make a documentary about the infamous story. Aided and abetted by several key Atarians, including Jim Heller, the man responsible for the dumping back

in 1983 and ET creator Howard Scott Warshaw, the team began digging and found... exactly what had been first reported in 1983. Jim Heller even took along the original documents, which revealed that ET cartridges only formed a small percentage of the 728,000 games buried there, instantly dispelling the 'millions of cartridges' myth. Despite this, stories are still running that claim the myth to be real.

While we've been unsurprised by the 'discovery' the documentary itself sounds promising, so we were keen to find out a little bit more about its origins. "At Xbox Entertainment Studios, our goal is to create interactive, original content for Xbox and other Microsoft devices that will change the way entertainment is experienced," revealed a Microsoft spokesperson. "We developed our first slate of original programming with an eye toward the Xbox audience, primarily males ages 18-34. The Atari legend has long been of interest to our audience so was a natural choice."

As a result Microsoft and Fuel Entertainment have been working carefully with officials in Alamogordo and while we're unlikely to discover what was under that concrete – digging was only allowed for a single day – the work on both sides has

728,000 games were confirmed via documentation, so we're not sure why everyone is acting so happy.

• Microsoft and Fuel Entertainment have teamed together to create a new documentary that will look at how the ET myth came to be. Currently known as Atari: Game Over it will be heading to both the Xbox 360 and Xbox One later on in the year and is directed by Zac Penri.

"The state has been wonderful to work with," continued our source.
"There was normal back-and-forth to ensure that the excavation is safe and environmentally responsible, which we respect and appreciate. We wanted to make sure we and everyone else was safe while we make this film."

The documentary, currently called Atari: Game Over, is directed by Zak Penn and also features Jonathan Chinn as an executive producer. We were keen to know just how much involvement ET's original creator was going to have, and it turns out that he's going to be a pivotal part of the story. "Howard Scott Warshaw is one of the characters in the film," confirms Chinn. "You can't really tell the story about Atari, and definitely

 Director Zak Penn poses with one of the ET cartridges that were found at the infamous dig site.

not the story of ET the videogame, without Howard Scott Warshaw. He's part of the film and will be in Alamogordo for the dig to find out whether his beloved game is, in fact, buried in 25 feet of garbage."

With the team hopefully aware of what they were going to find thanks to Jim's documentation, the big question is what stance the documentary is going to take. We're hoping that the focus is going to be more about how the myth could have come about, as any other approach would be pretty disingenuous. It's the myth side of the story that has caught the interest of Penn, who has previously written scripts for a number of high profile Marvel movies, including The Incredible Hulk and X2. "That's really what the movie is about," he tells us. "That's the question I'm trying to answer - why has it lasted? I think it's to do with the unique place Atari holds in our culture. For some people,

it represents the burial of that time.

This kind of nostalgia combined with the first, best game company – if Atari didn't crash and burn, I don't think people would care as much. I think people see it as something was lost and it buried, and somehow if we dig it up, we'll get it back."

It's a pleasing sentiment to be sure, but will the game itself be redeemed? If you play it you might discover that it's not quite as atrociously bad as many gamers like to make out nowadays. We were keen to know if Zac himself had played the game that has garnered the public's attention for the past few weeks. "Sure, many times," he tells us. "There's no question it's got some bugs. [But] the more I study it, the more I realise it's got some interesting choices for its time, some that didn't necessarily work that well. I think if people call it the worst game ever made, they haven't played a lot of games..." *

DOCUMENT THIS >> The videogame documentaries you must watch

THE KING OF KONG

The two main protagonists are no longer *Donkey* Kong world champions, but

champions, but
that doesn't mean you
shouldn't watch this fascinating
documentary. It remains a superb
insight into what drives individuals to
be the best of the best. And yes it does
feature the amazing You're The Best
by Joe Esposito.

COMMERCIAL BREAKS

■ This BBC drama

was supposed to show a company (Imagine Software) at the height of its powers, a company ready to unleash the infamous 'megagame' Bandersnatch that would change videogames. Instead the documentary team found a company

on the brink of ruin thanks to serious

financial mismanagement.

ONCE UPON ATARI

■ While you're waiting for Microsoft's new documentary, we'd recommend this

fine effort from none other
than Howard Scott Warshaw. It's full
of amazing anecdotes about the early
days of Atari Inc and gives insight into
its legendary parties, it's interesting
work ethic and why it was such a
creative think tank.

CHASING GHOSTS: BEYOND THE

■ This documentary focuses on Walter Day, the founder of Twin Galaxies, and nine

of the 16 key players
who appeared in the famous Life
magazine photograph and went on to
compete in the televised 1982 Video
Game World Championships. It's an
exhaustive look at the golden period
of the Eighties arcade scene.

INDIE GAME: THE MOVIE

mainly around
16-bit-styled
platformer Super
Meat Boy, it also
covers Braid and

Fez (which was still unreleased at the time of the documentary). Its players come across as a little precious at times, but it does help explain why indie developers play such an important role in today's industry.

EVERYTHING THAT'S BEEN HAPPENING IN THE WORLD OF RETRO THIS MONTH

PRESS START

[NES] The NES version of Megafootuses Bio Force Ape as a starting point, but does contain DO BRIGHT ENTERS

RSEOF

RETROREWARDS

CROWDFUNDING CAMPAIGNS OFFER LIMITED EDITION NINTENDO CARTRIDGES

hile we've seen retro software like Redux: Dark Matters and Pier Solar HD crowdfunded through sites like Kickstarter, it's rare to games for classic platforms offered as perks for larger projects. Recently though, a couple of pioneering teams have done exactly that, offering cartridges for classic Nintendo platforms to entice the public into backing their projects.

Over on Indiegogo, Big Deez Productions has been offering celebrity-signed golden SNES cartridges for its major project. That project is Shaq-Fu: A Legend Reborn, a tongue-in-cheek reimagining of the basketball superstar's martial arts videogame, so the game is fittingly a reproduction of the project's inspiration. With only 200 copies

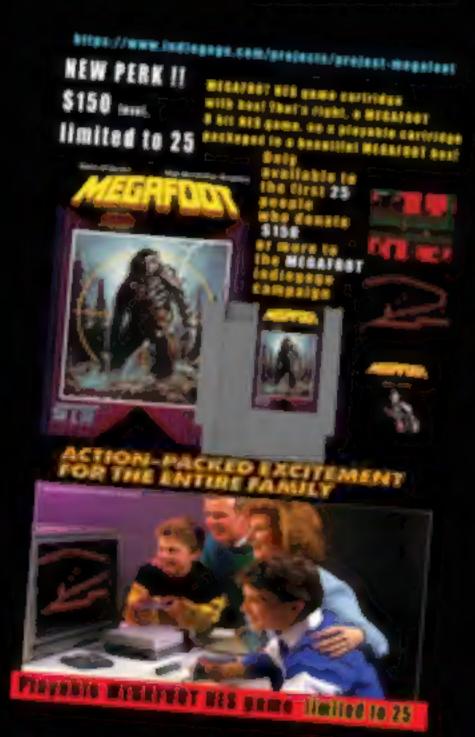

available the cartridge is a genuine collectible, but actually donating to receive such a product might have proved a double-edged sword - while a \$100 contribution could have netted you a genuine rarity, you would have essentially paid \$100 for a copy of Shaq-Fu. At the time of writing the campaign was ongoing, but 20 copies had been spoken for.

Even more scarce than the golden Shaq-Fu is Megafoot, The Indiegogo campaign was actually focused on creating a costume and trailer for a retro-styled monster movie, but additionally offered a NES game as a perk. "We decided to support Megafoot with a NES game because it seems like the kind of game that LJN or Ocean would have licensed to make a game out of in the Eighties," said John Brennan of the Megafoot

team. "With that idea in mind, we decided to have the game made so that our backers could have a unique collectible to treasure."

A great amount of care has to be put into such collectibles, due to the discerning tastes of the collectors. Megafoot's production team has had to include everything a NES game would have done in the Eighties, from the cardboard box and manual right down to the dust cover and even the polystyrene block that padded the package. But what of the game itself? "The game is actually a modification of the legendary unreleased NES game Bio Force Ape," John tells us. "We've repurposed the story so that instead of the Ape, the player takes control of Megafoot as he escapes from the government research facility that has been experimenting on him.

 Megafoot's designers have clearly taken care in crafting an authentic retro aesthetic for the box art.

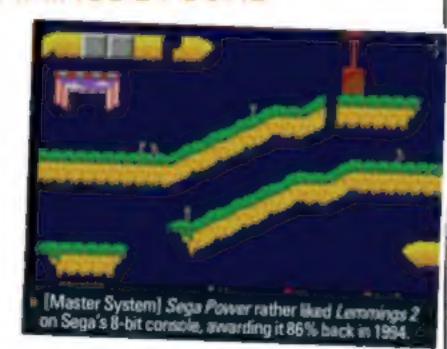

Essentially, the game serves as a playable prequel to the film."

It's not a brand new game, then, but it does convey the spirit of the project quite well. As John asks, "Who wouldn't want to play as a genetically modified Bigfoot who can take people out with a German Suplex?" The reward was rather popular - despite only adding the game a week prior to the end of the campaign and setting a relatively hefty contribution requirement of \$150, Megafoot's team managed to find owners for 18 of the mere 25 available copies. As a publicity stunt, the success is hard to question - those contributions represent almost 14 per cent of the campaign's total intake. It will be interesting to see what emerges as other crowdfunding projects realise the appeal of retro gaming....

LONG LOST LEMMINGS RESCUED NEW SEGA VERSIONS LEMMINGS 2 FOUND

t's fair to say that Lemmings 2: The Tribes wasn't quite as widespread as its ubiquitous predecessor where the original made official appearances on over 20 platforms, the sequel arrived on just eight. However, official conversions for the Master System and Game Gear have surfaced in a complete state as ROM files, courtesy of former Spidersoft developer Matt Taylor. The conversions had been developed for release in 1994 and were even sent out for review, but Psygnosis ultimately decided against releasing them due to the declining software

sales on Sega's 8-bit platforms. With their release, two more games thought long lost have been preserved for gamers to enjoy.

MOST EXCITED **ABOUT**

PRINCE OF **PERSIA**

We're hearing rumours of a new 2D entry in the series, running on the UbiArt engine that powered the recent Rayman games. If the rumours are true, we can't wait.

 (SNES) Fire Pro Wrestling remains Meauda's most enduring work, with games appearing on a variety of different formats.

RIP MASATO **MASUDA**

FIRE PRO WRESTLING CREATOR PASSES AWAY

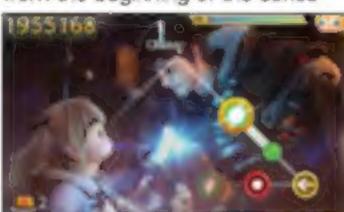

etro Gamer has learned that Japanese

developer Masato Masuda passed away on 29 March 2014, aged 48. Masuda's first work to gain a following in the West was the NES game Pro Wrestling, which he developed as a one-man project. He later rose to prominence during his time at Human Entertainment as the creative force behind Fire Pro Wrestling - a series of grappling games that has enjoyed continued success since its introduction in 1989, even enduring the closure of Human Entertainment. Developers and fans paid tribute via Twitter, including former Human Entertainment colleague and Killer7 developer Goichi Suda, who stated "I genuinely pray for his happiness in the next world. He was one of the greatest creators of videogames and he was my direct teacher." Our thoughts are with Masuda's family and friends at this very sad time.

THEATRHYTHM CURTAIN **CALL ANNOUNCED**

hroughout the long history of the Final Fantasy series, one of its most consistently well-regarded features has been the classic soundtracks that accompany each game. Such is the regard for these tunes that a 3DS game, Theatrhythm Final Fantasy, was created around them - and it proved a surprise hit, eventually making the leap to iOS devices. As a result, the game is receiving a 3DS sequel with over 60 characters and over 200 tracks, from the beginning of the series

right through to modern releases. Even spin-off games like Crisis Core: Final Fantasy VII and Final Fantasy Mystic Quest are to be represented, so we're looking forward to a very comprehensive game.

YOU'VE BEEN FRAMED PROJECT ZERO TO RETURN ON WILU

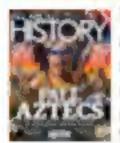

ecmo Koei has confirmed that it is developing a new sequel to its spooky snap-'em-up Project Zero (or Fatal Frame, in North America), to be released exclusively on Wii U. The series was introduced in 2001 on the PS2, but has recently been appearing on Nintendo platforms, with the last two being Wii exclusives. The console's GamePad controller functions as the in-game camera, allowing

players to scan their environment for paranormal activity. Western releases are by no means certain - only one of the two Wii games made it - but we'll be sure to keep you all updated.

[PlayStation 2] roject Zero is one of the creepiest survival-homor Gärnes we'ver played, and a perfect fit for Www.

Amazing titles on greatdigitalmags.com

All About History

In issue 13 of All About History wa saddle up our horse and go on a vendetta ride with the famous Wild Westlawman

Wyatt Earp who became an outlaw to hunt his brother's killers. We also journey into the Aztec civilisation to witness their fall at the hands of the mighty conquistadors.

gamesTM takes a look at the 12 months that'll change the face of gaming. Inside you'll find a guide to all the tech

that'll revolutionise the next-gen, games including The Division and Wolfenstein: The New Order that are set to reinvent their respective genres and an in-depth look at the shifting sands of the MMO.

X-ONE

Master Chief is coming back on Xbox One and X-ONE is celebrating his return as Halo 5

leads the discussion of the games that will blow your minds in 2014. From Quantum Break to rumours of Crackdown 3, there's lots of things to brighten the Xbox One landscape on the way, as well as more on Batman: Arkham Knight.

Who says summer is always quiet in gaming? Issue 244 of Play has 101 killer PS4 essentials, plus there's a look at

the evolution of Uncharted and whatwe can expect to see from the hit series on PS4. We also have a rare chat with Quantic Dream's visionary David Cage.

CIVE US THO HINUTES AND HE'LL GIVE YOU THE RETRO WORLD

THE VAULT

THE COOL RETRO STUFF THAT WE'VE HAD OUR EYE ON THIS MONTH

PICH OF THE MONTH

Street Fighter Deck-Building Game

Street Fighter has received the board game treatment before, but this is the best game we've yet experienced. Players pick one of the franchise's well known fighters (from Ryu, to M Bison) with the aim to score as many victory points as possible. Points are typically scored by beating the current Stage Boss, but you'll first need to ensure that your deck is strong enough to defeat them. To do this, players take it in turns to buy new cards from a row of five called the Line-Up, using the cards in their hands to pay for them. Once purchased, cards go to the discard pile until the player runs out of new cards to draw. The discard pile is then shuffled to became your new draw deck, ensuring that your deck slowly builds in power over time. Eventually you'll be able to unleash your character's signature move, which will give you a much stronger chance of success. A slick release with great art design that even non-Street Fighter fans should enjoy.

Price: £24.99

From: www.boardgameguru.co.uk

For us regular civilians this T-shirt simply looks quite nice and doesn't attract gunfire ""

Metal Gear Solid FOX T-Shirt

If you're a member of the FOX unit undertaking covert operations, wearing your affiliation big and bold on your chest might seem a little bit of a tactical error. It's not the kind of thing a stealth expert like Snake would do. Luckily, for us regular civilians this T-shirt simply looks quite nice and doesn't attract gunfire – though it might trigger alert status in fellow Metal Gear fans.

Price: £17.99

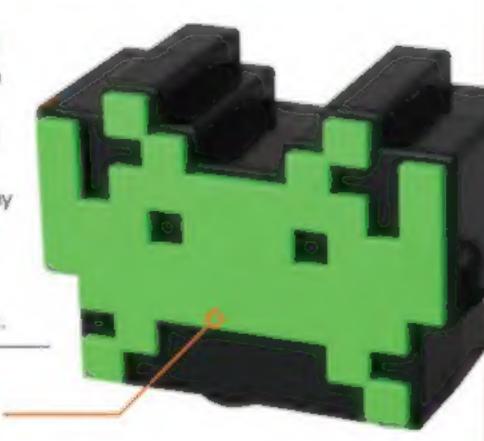

From: www.forbiddenplanet.co.uk

Space Invaders Wind-Ups

The Space Invaders merchandise train seems unstoppable, and this month we're quite taken with these colourful wind-up toys. Invader racing is one thing, but if you're feeling creative, why not set up an office invasion? Wind them up, set them running towards a colleague's desk and watch them scramble for a makeshift laser cannon.

Price: £6.99

From: www.funstock.co.uk

Neo Geo X

The Neo Geo X has improved quite a bit since we last looked at it in issue 116. While the emulation is still not 100 per cent accurate, it now works far better through HDMI thanks to an improved display and better sound (avoid using composite though). There's been big improvements made to it by the homebrew scene as well, making it compatible with numerous additional emulators. It also better value for money as it now includes the Neo Geo Mega Pack, which features 15 additional games, adding to the 20 already included.

Price: £124.99

From: www.funstock.co.uk

Space Invaders ice Tray

You might be wondering why you need to make Space Invaders out of ice. So were we, until we realised how misguided we were. Apart from being excellent for cooling drinks as the summer rolls on, the ice invaders allow you to simulate an actual Space Invaders attack – simply hold a melting invader in a warm place and watch as it blasts the floor with drips.

Price: £7.99

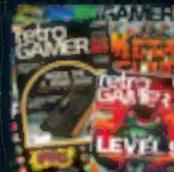

From: www.funstock.co.uk

Retro Gamer Coasters

Erase annoying drink rings and get a blast of nostalgia at the same time with our awesome coasters. Available in packs of four, these tough durable coasters feature some of the best **Retro Gamer** covers we've ever produced, making them perfect for your loved ones.

FET COMMS PRUL DATE DE LA CORLA THE RETRO WORLD

Here's my bio. ..

In 1992 I started out on Mean Machines Sega and Mintendo Magazine System. In 1995 I became editor of C&VG I led the C&VG website from 1998 until Christmas 2000, then I left journalism to be concept design manager at Criterion Games. I returned to journalism in 2002 and from 2005 I've been running my own company, Unlikely Hero.

Continue?

here was a time, at the start of time where videogames are concerned, that being difficult was precisely the point. Old guys like me; we're used to being knocked down. Heck, it's what we expect. It's what we admire! Yet there is a difference between difficult and destardly, and that is for sure.

that the reason Yoshi's Story looked so lovely and colourful on N64, with such fullaby music besides, was to sugar-coat its true purpose: to challenge your hand-eye coordination to within nanometres of an average person's petience. Gamers trained on Mega Man, Rainbow Islands, Bubble Bobble and early Mario understood this instinctively.

Most games from the Eighties and early Nineties are wolves in sheep's clothing. Or, um, cheerful cartoon dudes on missions that make the hardships of marine boot camp seem like a ride on a park swing.

Take Sega's Carnival: basically a jaunty fairground shoot-out with pretty flags, bunny

a pop at. I forget exactly why I backed away ashen-faced, but I do remember thinking Space Invaders and Galaxian feit like a holiday afterwards. But Carnival was a coin-op. Its job was to take your coins. It was very good at its job, much better than Gorf, or you name it.

The part that I find most interesting about games moving on from those times is when the puppet-masters at Capcom and Namco etc started to look at characterisation. Sure, their intention was always to steal your money, but some of them wanted you to smile as your pockets gradually emptied. Others wanted to seriously intimidate.

Capcom's Red Arremer is perhaps my greatest nemesis. More than a cluster of pixels, Red Arremer was such a feeling bestard standing between me and the next beautiful location in my Ghouls 'N' Ghosts adventures. I have boycotted the little guy's solo career out of principle for all the misery he caused me. Yes, Gargoyle's Quest can rot in hell.

Years before that, the final Space invader, who was so surprisingly pesky with his new turn of pace, was really kind of cute. He was just a thing, but you could imagine that determination to complete his mission at a speed hopefully beyond the fingers of a dull-witted human. Space invader, Oscar Mike. He was tricky but not frustrating because he wasn't getting in the way of anything other than a high score. Everybody knew what was coming next., the exact same thing as last time!

My most enjoyable difficult gaming moments have been those during which I've been yelling the house down too. The 'Terminator' twins in Super Contra pushing me to scurry and wall-hang for dear life before the entire back wall is torn apart - completely unexpectedly - by a giant fire-breathing robot. I seriously think Konami designers were trying to induce heart attacks in their prime.

It probably says a lot about me that I still thoroughly enjoy being 'schooled' by the best videogames. It's like staring down the devil himself, face to face through the bulletproof glass of a high-security prison's visitation booth. Actually, it's true that the very best examples of difficult games only point at our own personal ineptitude.

Giant Bullet Bill still surprises muto

a quick game...

R.B.

* [Intellivision] Shoot the animals, collect the bonuses and hit the extra ammo in this colourful shooting game. a single-screen fixed shoot-'em-up which saw you control a nuclear submarine that had to stop attacks from enemy aircraft and boats. They fired missiles and dropped mines and depth charges in their relentless pursuit of you

You could only shoot upwards and needed to clear each level of the bombers before progressing to the next. While not Taito's finest coin-op hour, *Polaris* was fun in the short-term, playing a lot like an aquatic version of *Space Invaders*

For a more conventional shooter set in the vast bleak vacuum of inky

black space, why not try Space Cyclone? It followed the well-trod path of shooting swathes of invading aliens before they progressed down the screen toward you. In an interesting twist, if three of these aliens managed to get to the bottom of the screen they constructed a larger more powerful spaceship which could then fire a devastating cyclone beam at you. Unfortunately, that twist aside, the game was dull and generic and it came as no surprise that Space Cyclone barely registered any interest anywhere outside of the production team

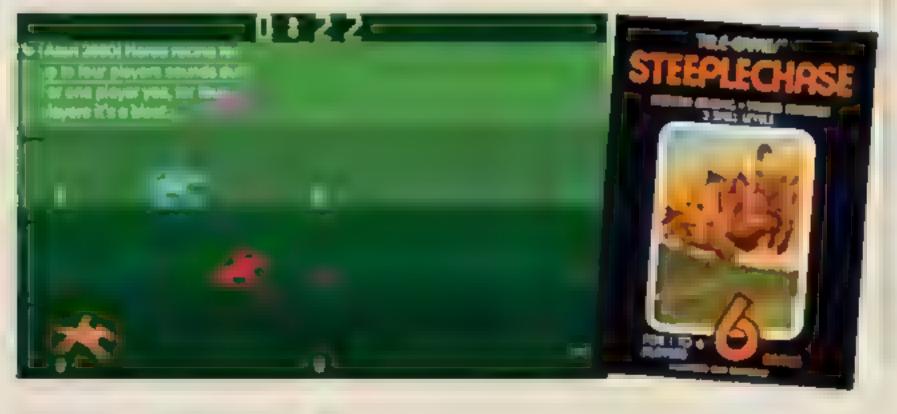

Midway, on the other hand, appeared to have an idea on how to

mix things up a bit in shoot-'em-up coin-op land. Its new game, Space Encounters, had an interesting pseudo-3D appearance as you flew down the trenches of a space station while taking out the ever-increasing alien threat as you went

While Space Encounters leant heavily on the Star Wars Death Star trench run scene for its basic premise, the game was executed well. It was graphically simplistic but the 3D was effective with enough playability to warrant perseverance. The graphics were monochrome with a smidge of colour introduced by means of a coloured plastic overlay on the screen.

Elsewhere, Red Tank was the latest arcade offering from Sigma. It played like a cross between Pac-Man and one of the tank games from the Atari 2600 Combat cartridge

Your yellow tank had to pick up dots that were handily turned into shells to shoot at your computerised opponent, the red tank. Once all the dots were collected the difficulty level cranked up a notch. The red tank could also collect the dots and regurgitate them into land mines

THIS MONTH IN... COIN CONNECTION

Atan has already introduced the smallersized arcade cabinet, the cabaret, for smaller premises to get coin-op machines on site when space dictated otherwise previously

Missile Command was now the second game to be given the cabaret makeover after the resounding success of its Asteroids cabaretsized machine

SOFTSIDE

So you're a fashion conscious gamer with an eye for a nice timepiece. The new Casio calculator digital watch

could be yours for just \$49.99. Or you could wait for a couple of years and get it free when you bought Cascade's compilation of rubbish games, Cassette 50

80 MICROCOMPUTING

Dubbed the 'Special Games Issue', the TRS-80 publication promised much Type-ins aside, it was devoid of games apart from a review of Invader From Space by Acom Not to be confused

with this month's game release by Epoch, the TRS-80 game was another mediocre Space Invaders game

While Red Tank played like an Atari 2600 game, there were two new releases for the faux woodenfronted home system. First up was Circus Atan from Atari in which you controlled a see-saw that propelled a reckless clown skyward toward rows of horizontally-scrolling balloons with the hope of popping a few of them before falling back down to the see-saw again.

clone smeared in face paint and donning a squirty bow tie then you would be correct. Similarly, if you think it sounds pretty dire and not much fun to play you would most certainly be wrong. Despite the glaringly obvious graphical limitations of the console, Circus Atan was a lovely offering.

There was further Atari 2600 cartridge action to be seen this month with the release of Steeplechase Developed by Atari, it was one of three exclusively designed games for release on Sears' Tele-Games abe and would only be available to buy through Sears stores.

The game itself was, usurprisingly, a horse racing game featuring four horses with plenty of fences to jump. The real playability came from the simultaneous four-player challenge It also made use of the underused paddle controllers rather than the wrist-breakingly stiff Atari joysticks. Steeplechase originally started out

life as a 1975 Atari coin-op game that was virtually identical except for having a six-player mode.

Sega's recently released arcade game Carnival made the relatively quick jump to the Intellivision console this month. The fixed shooter would see you attempt to shoot down ducks, rabbits and owls as they moved across the screen in the style of a fairground shooting range. Once the targets had been cleared, you receive a bonus for bullets remaining and were introduced to what was arguably the first bonus round in videogames, a level where you got to shoot a bear for extra points.

Letters that spelled out bonus could also be shot to gain bonus points and the game ended when

you ran out of amount on However extra packs of five and ten bullets could be shot and added to your ammo pile as they appeared intermingled between the various animal targets.

Carnival proved to be popular in the arcades and the Intellivision port was also very well received by arcade-goers. Such was its success that later ports to the Atari 2600 and ColecoVision followed.

From Space, a handheid electronic game from Epoch. The chunky, white cased Space Invaders clone was also licensed to Grandstand in the UK and was classed as a handheid rather than a tabletop game. If you had gargantuan claw-like hands with a thumb like a steel girder to use the control stick then you probably would've been fine...

The game itself was simple, bogstandard Space Invaders clone. The sprites were colourful but only by means of a tinted plastic overlay. It played great and annoyed everyone within a two-mile radius such was the volume of the beeps emanating from its plastic innards.

That said, it looked like something Spock from Star Trek would survey a planet with. Yet it was still portable videogaming and what more could a young schoolboy/gril want in the early Eighties?

AUGUST WORLD NEWS

of Azaria Chamberlain, a twomonth-old baby girl. She had been with her family as they camped near Ayers Rock in Australia before being reportedly taken from the family tent by a dingo

Her body was never found and the parents, Lindy and Michael Chamberlain, were suspected of murder. They were tried and found guilty with Lindy sentenced to life imprisonment.

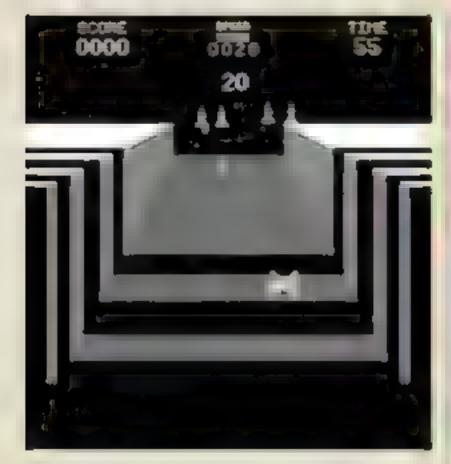

In 1986 a piece of clothing was discovered next to Ayers Rock and was found to be a piece of the matinee jacket worn by Azaria. The jacket had never been recovered and was the missing piece of evidence needed to exonerate the couple

Complex legal wrangling continued for many years until, after several inquests, on 12 June 2012 the coroner ruled that a dingo had been responsible for Azaria's death

of actress Yootha Joyce who was most fondly remembered for her role opposite Brian Murphy in the popular Seventies sitcom, George & Mildred.

It was a good month for LP releases with One Trick Pony (Paul Simon), Kaleidoscope (Siouxsie & The Banshees), Drama (Yes), Wild Cat (Tygers Of Pang Tang) and Panorama (The Cars) all being released during August.

15 August saw the premiere of the movie McVicar staring Roger Daltrey in the title role as the armed robber who was dubbed by Scotland Yard as "Public Enemy Number One" and who later became a noted journalist and writer

 Arcade: Space Encounters bore a remarkable resemblance to a certain Death Star scene.

[Arcade: Space Invaders meets submarines in Taito's
 Polaris coin-op released this month.

THE LATEST NEWS FROM APRIL 1997

APRIL 1997 -Apple Bandai Pippin rots, Nintendo 64 expands, The City Of Lost Children gets lost, Oddworld is great, Sega takes Ages again, Metal Slug blasts onto the Saturn while Elevator Action Returns. Richard Burton gets stuck between floors...

ddest console release news of the year so far was that Bandai planned to release its wholly unsuccessful Apple Bandai Pippin system in Europe this month.

On paper Bandai's machine promised much, targeting gamers who wanted to play online and wanted to utilise its multimedia options. While the hardware itself was a solid piece of kit, it was the woefully lacking software base that destined the Pippin to the history books as one of the worst consoles ever

Since its Japanese release in 1995 the Pippin could only muster approximately 80 software releases including games, utilities and applications. US releases were even more pitiful with just 18 titles released since the American launch

Bandai had reportedly stockpiled over 100,000 units of the machine in readiness for the European release Worldwide sales eventually stopped at 42,000 and by the end of 1997 the Bandai Pippin was discontinued.

There was an update from Nintendo on its proposed 64DD peripheral for the Nintendo 64 console. The new add-on would attach to the N64 giving it oodies of memory expansion and a UK version was also to be made available in time.

New games could be downloaded via Randnet, an online gaming service which allowed access to games demos, online competitive gaming and internet access. New expanded games would also be planned

Once again software support was less than impressive with just ten titles being made exclusively for the 64DD Developers bailed and projects were hastily scrapped

The 64DD had been in Nintendo's plans since 1995 and after numerous delays it was belatedly launched in Japan on December 1999. By then the popularity of the N64 was beginning to diminish and the 64DD just wasn't a purchase N64 owners needed to make Japanese sales of the unit were poor and the decision was made for the European and US versions to be cancelled. The \$399 price tag probably hadn't heroed.

Released this month was an unusual movie tie-in game, The City Of Lost Children, a 3D adventure from Psygnosis for PC and PlayStation. The critically acclaimed French movie, released in 1995, was a beautiful and atmospheric story following Miette, an orphan girl who discovers that children are being stolen from the city and placed on a nearby oil rig to have their dreams removed.

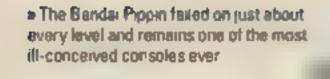

APRIL WORLD NEWS

1 April saw the periheion, or closest approach to the sun, of the spectacular Comet Hale-Bopp. It had been a feature in the sky for several months but during the early months of 1997 it became brighter becoming a very noticeable feature in the night sky even with the naked eye in a light polluted city. It remained visible for just over 18 months

7 April saw the expected running of the 150th Aintree Grand National, the world-famous horse race. An hour before the race was due to start two bomb threats were made using IRA code words. An evacuation of 60,000 people and postponement of the race followed. It was run two days later on the Monday with Lord Gylene winning by 25 lengths.

15 April saw teen rock/pop band Hanson release their debut single MMMBop. It became an instant hit attaining the number one position in 27 countries. The catchy yet sugary sweet tune went from being a fun summer song to a reviled annoyance due to being massively overplayed on radio stations

21 April saw the first instances of burials in space when 24 samples were loaded onto a Pegasus rocket and sent into Earth orbit. The mission was called Celestis and contained remains of Krafft Ehricke and Gerard K O'Neill, a noted rocket scientist and space physicist respectively, as well as Gene Roddenberry, creator of the television series *Star Trek*

 [Saturn] A fantastic sequel that boasted stunning enimation and plenty of over-the-top explosions.

The game followed the movie premise closely and retained its fantasy steampunk feel. It had some lovely pre-rendered backgrounds, great graphics, digitised sound lifted directly from the movie and the immersive atmosphere to match, yet it somehow managed to miss the mark in gameplay terms. The character movement was painfully slow and the gameplay progressed at such a lethargic pace that frustration soon set in and when you did persevere with it, you soon found it could be completed very quickly.

Nearing completion was another PC and PlayStation game, Oddworld Abe's Oddysee, a platform game with adventure elements developed by GT Interactive. Early previews looked pretty promising with some nicely designed graphics laid on more prerendered backgrounds

Thankfully gameplay didn't disappoint when it was released Players controlled Abe, an enslaved meat factory worker who finds out that the tasty yet mysterious new meat they are producing is actually his own allen race. Abe makes a break for it after making the discovery and tries to release his fellow workers while making good his escape.

Abe's Oddysee was very well received upon its release, with its very testing puzzle elements dovetailing nicely with the crisply designed graphics. It sold extremely well and

 [Saturn] Sega delived into its coin-op back catalogue to produce another compilation

looked set to become a classic on the original PlayStation

Sega was keen to take advantage of the growing interest in videogames of yesteryear following the surprising success of its Sega Ages collection containing some of its best-loved arcade favourites from the Eighties

So Sega decided it would cobble together another set of games for the morbidly titled Sega Ages Memoral Collection Volume 1 exclusively for its Saturn console with a relatively strong line-up of Up'N Down, Pengo, Head On and the classic platformer Flicky

A second volume was also being planned for later in the year, this time with six games; Star Jacker, Sinbad Mystery, The Ninja, Monaco GP, Samurai and Penguin Land. More games but arguably not as strong a line-up as the first volume. Despite strong sales on the Sega Ages Memorial Collection Volume 1, it disappointingly never made it outside of Japan. Unfortunately neither did Volume 2

Another great Sega Saturn coin-op conversion that remained a Japan-only release was SNK's *Metal Slug*. The seminal run-and-gun that was heavy on artillery and caked in humour was out this month and was as playable and as fun as the coin-op original However, it was re-released shortly afterward once several bug fixes had been implemented.

Completing a trio of non-European Saturn releases was a sequel to an arcade favourite from 1983 and a popular cross-format home computer game. Elevator Action Returns savy a return to the familiar 2D scrolling platform action world of the original, albert it was multi-directional this time around

The game saw your team attempting to foil a terrorist plot to nuke various targets spread across six large levels. You had to locate the secret data spread throughout these levels and use the information to disarm the bombs. At game start you also had a choice of three different characters to play, all with varying abilities.

Elevator Action Returns was a superb update that offered fanastic animation, slick level design and plenty of blasting action. It did get a North American release, going under the name Elevator Action 2, but the UK once again missed out on it. We're still

THIS MONTH IN... AMIGA FORMAT

AF reported that Silica Shop, vendor of all things Amiga, had gone bust again. Having been rescued by Anglo Corporation a year prior after the demise

of Commodore, Silica Shop pressed ahead by attempting to make headway in the competitive PC market It struggled, and finally succumbed to bankruptcy

COMPUTER & VIDEOGAMES

C&VG celebrated the forthcoming 20th anniversary of Star Wars with a look the history of officially licensed Star Wars

videogames. The first was released in 1982 by Parker Brothers for the Atan 2600 and was the spiendid Star Wars: The Empire Strikes Back featuring the AT-AT walker batties on Hoth

Not a month goes by without a Top 50 Best Games Ever list published somewhere. This month was the Amiga's turn with its top three being; Monkey Island 2: LeChuck's

Revenge (Lucasfilm Games), Sensible World Of Soccer (Sensible Software) and in top spot was Worms: The Director's Cut (Team 17/ Ocean) Really?

Blitz

NOW THAT'S HOW YOU LAND A PLAN

..

» COMMODORE » VIC-20 » 1982

Blitz is an incredibly simple and remarkably addictive game where your goal is to land your biplane. Unfortunately the airport is full, closed or too far away and so you decide to land in the city. To do so you've got to clear away those pesky skyscrapers which otherwise cause crashing problems for your little biplane. Not very PC to bomb a city but for a computer game that sinot important – besides we can assume the city was populated by evil zombies.

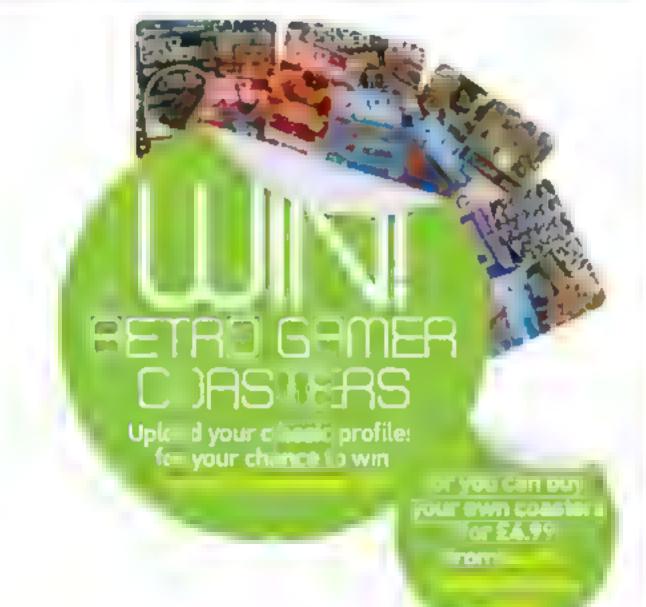

You biplane starts at the top of the screen and flies left to right. Each time it leaves the right of the screen it emerges back on the left but slightly lower down. As you pass over the city below, you can drop bombs. A direct hit with a building will take a few stories off the top of it. Do this to all the buildings until they are completely destroyed and your biplane can land, with the reward being an animated waving man followed by the biplane taking off into the sky for another round.

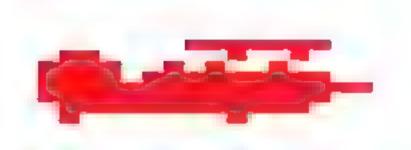

Blitz is a game of chance as much a game of skill due to the randomly generated city landscape you are given at the start of every game. However that doesn't matter because you just have to beat it. You can get so close to clearing the city sometimes and it's hard to let go and give up. Although it came out on other platforms, it is well worth seeking out the VIC-20 version of this game which, in my opinion, is the best one.

ANDY H

HITH...

lan Malcolm

Every issue, we put an industry veteran in the hotseat. This month, Retro Gamer touched base with Ian Malcolm, a former lead designer for Australian developer Melbourne House

Who is Ian Malcolm?

Which of your own games would you recommend to our readership and why?

Looney Tunes Space Race on Dreamcast: one of the earliest examples of cel-shaded 3D. The characters and environments looked gorgeous, the coders absolutely nailed the controls, the track designs and general game flow work well, and at the end of the day it's still both fun and funny to play

What is your proudest memory?

Seeing my name in the Star Wars (NES) manual at the age of 241 Partly for the connection with a personal touchstone, but mainly because when I joined the project mid-development it was not in great shape, and I had a 'sink or swim' opportunity to turn it around, redoing all the level designs and control tuning from scratch

What's the most difficult thing you've encountered while working on a game?

Design by committee' was a recurring issue which contributed to a multitude of development sins, particularly when it involved dramatically shifting creative direction multiple times mid-production due to changing trends or just the whims of those more senior. Decent projects cancelled for external reasons beyond the team's control were also less than fun

Which industry veteran do you most admire?

Tim Schafer, for creating such a diverse body of work while still bringing his recognisable 'touch' to each, regardless of genre or style Full Throttle was hilarious, but then Grim Fandango just knocked it out of

the park – just such a brilliant artistic direction to take for a big budget title, and he absolutely nailed it

How would you like your games to be remembered?

I guess at this point I'm just happy
if they're remembered at all, and if
they brought some enjoyment and
laughs along the way. Funnily enough,
a barista I get coffee from here in
Melbourne turned out to be a huge
Space Race fan, but what made that
special was that he was Venezueian
and had originally played it there

Which game do you wish you'd made and why?

It has to be The Legend Of Zelda
The Wind Waker. I always loved the light-hearted yet epic feel. Shifting the action onto the ocean created a seemingly limitless potential for exploration that I would have dearly loved to work with. People talk about the moment they first stepped onto Hyrule Field, but for me getting onto the open sea in Wind Waker was Hyrule Field x100

What opportunities has making videogames given you?

The opportunity to meet and work with talented people from many disciplines, travel the world, hang around Hollywood movie sets to shoot visual reference, attend hotel rooftop parties during the madness that was E3 in the 'old days

What's your darkest memory of being in the games industry?

The spread of 'crunch time' culture I worked a handful of late nights and

weekends when it was necessary toward the end of a few projects but, over time, crunch time became the norm for almost any milestone

And your best?

The people I worked with. Truly the most funny, creative, talented and eclectic bunch of individuals you could ever hope to spend time with. Some are still among my closest friends, even though we're now all scattered across the country and the world

Can you share one interesting anecdote about your time in the games industry?

I was supposed to fly to LA to direct character dialogue recording for Men In Black II and picked up my producer in the taxi on the way to the airport. Only when we checked in did he inform me we were going to a studio in San Jose instead of LA, for last-minute budgetary reasons. There was something very surreal about traveling to the other side of the world to spend four days recording dialogue with Will Smith and Tommy Lee-Jones soundalikes in a converted garage literally in the recording engineer's suburban backyard

How has the industry changed over the last 20 years?

The key shift for me was going from small dev teams of three to six people to teams of 50+ on multi-million dollar projects. Having said that, while those huge teams and budgets are still there in the mainstream, it's also been interesting to watch the return of the small team/bedroom developer via things like iOS

THE BLUFFER'S GUIDE TO MAZE GAMES WIZERD OF WOR MONSTER MAZE BERZERK **RMIDAR** INZINES **3US** 3113 RETRO GAMER | 23

KNOM YOUR MRZE GRMES

PUZZLE MAZE

■ A maze game where players must simply find a route to the exit as in *The Amazing Maze Game* or the Master System's *Snail Maze*

MAZE CHASE

■ A common theme of many arcade games like Pac Man and Crystal Castles, where players collect items while being pursued by monsters

MAZE SHOOTER

Also known as 'corridor shooters' these usually feature top-down maze environments, equipping you with a handy weapon to defend yourself

SCROLLING MAZE

■ A game where only a portion of the maze layout is shown on screen, which scrotls as the player moves. Examples include Gauntlet and Rally X

PROGRESSIVE MAZE

■ Some maze games allow the player to change their layout as they progress, such as tunnelling in *Mr Do[‡]* or spinning gates in *Lady Bug*.

GRID CAPTURE MAZE

■ A maze sub-genre where the object is to get your character to encircle portions of the screen, often filling them with colour, as in Amidar

3D MAZE

Developers soon learned how to put gamers into mazes rendered in three dimensions on-screen, along with the occasional T-Rex

MAZE ADVENTURE

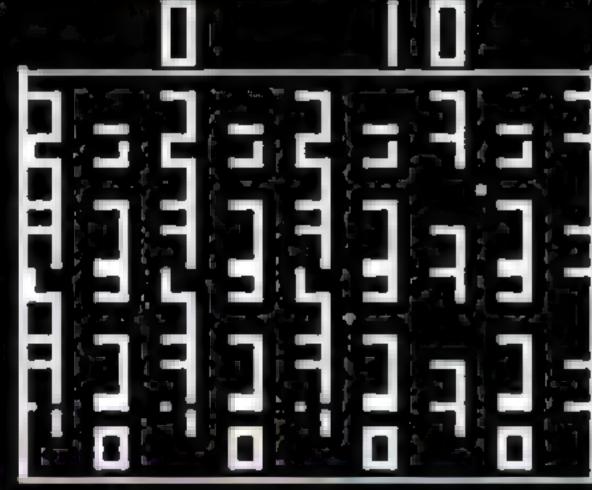

■ From simple text games , ke Colossal Cave to 3D titles like Dungeon Master, mazes have been long associated with adventure games

MOUSE IN THE MAZE 1959 at MIT, this was the

at MIT, this was the first program to display a maze layout on a computer.

construct that's been popping up in various aspects of human culture for thousands of years, from ancient legends to stately homes and modern movie blockbusters, along with the occasional crop circle in Wiltshire. The Greeks told of one beneath the palace of King Minos with a scary bull monster, while William III had a famous one built out of shrubbery at Hampton Court. More recently, David Bowie ruled over one full of Muppets, and Harry Potter pootled around one on a quest for the Goblet of Fire

Interest certainly samething about their labymithine complexity that fires the imagination, even when presented by the simple limit of text: "You are in a maze of twisty limits passages, all alike," a much-quoted location description from Will Crowther's Colossal Cave Advanture. The original version of Colossal Cave was written for the PDP-10 mainframe computer in 1975. A keen amateur caver, Crowther based his program on his exploration map of the Mammoth and Flint Ridge cave systems in Kentucky, giving rise to what is widely regarded as the first ever text adventure. The 'Pirate's Maze' in the game had a surreal, slightly nightmarish quality where doubling back on

 [Areade] Whard Of Worwas on orjoyable more shorter, especially with two players. g

a [Areada] Ruly X featured sprawling screlling masses and Wholly Recoveryle metering.

I was a huge Gauntlet fan and loved the way that game handled four players

George Petro

your movements in various compass directions wouldn't siways return you to the same place. The only way to get your bearings was to drop inventory items in its various identical rooms to try and navigate it, or draw a map, it was the humble beginnings of a typical adventure game scenario that would cause a generation of videogamers to pick up pen and graph paper and become would-be cartographers themselves.

The concept of creating a maze as an environment for a videogame goes back even further, to the computer labs of the Massachusetts Institute of Technology in the late Fifties. In 1956 the distinguished mathematician Claude Shannon joined MIT's Research Laboratory of Electronics. Along with devising one of the first computerised chass programs, Shannon had created Theseus, a mechanical roving 'mouse' named after the mythical slayer of the Minotaur of the Cretan

GOTCHA

This monochrome Atari coin-op, designed by Pong creator Al Alcorn, was the first arcade maze game.

COLOSSAL CAVE ADVENTURE

The first parser-based text adventure featuring several mazes explored by typing in different compass directions.

HEAD ON I----

■ A Sega arcade game that introduced the concept of collecting dots to proceed to the next level, a year before *Pac-Man*.

MAZE WAR

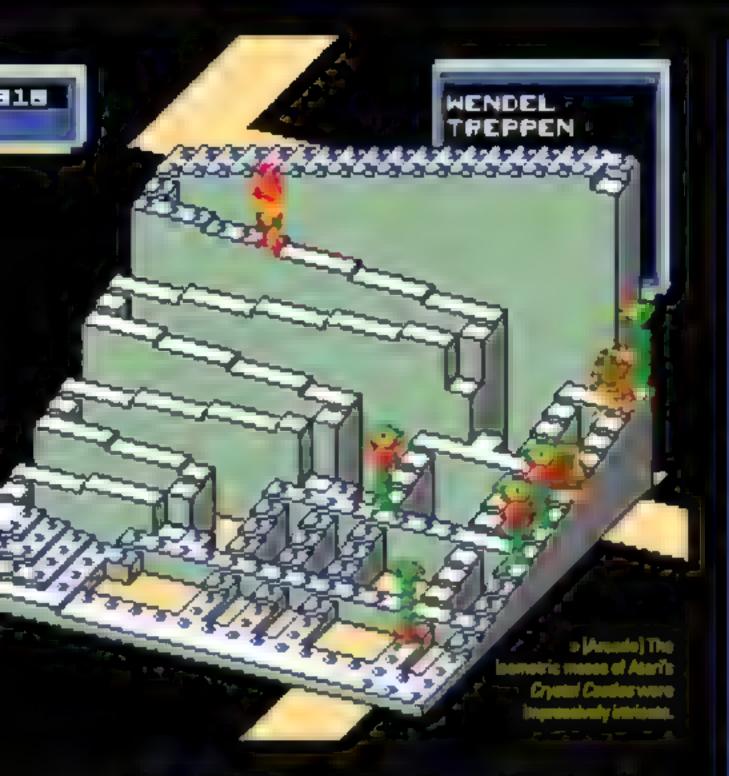

,----

The first example of a navigable 3D maze environment, and the grandfather of the first-person shooter.

1974

THE AMAZING MAZE GAME

■ An early example of a competitive maze puzzle game, where two players battled to reach the exit before each other.

labyrinth. Shannon's creation could be taught. to navigate a physical maze, and was the first device of its kind to display artificial learning and intelligence. In 1959, inspired by Shannon's work, two grad students, Doug Ross and John Ward, wrote Mouse In The Maze, a program for MIT's TX-0 computer, it allowed users to draw a maze on the systems' primitive CRT screen with a light pen. A small 'blip' representing a mouse. would then enter and navigate the maze looking for other dots representing cheese wedges. This program was one of the first ever interactive videogames, even if it was merely a digitised version of the Theseus project.

he first appearance of a maze-based. arcade game was Ateri's Gotcha from 1973, designed by Pong creator Al Alcorn, it was the fourth arcade game by the company following Pong, Space Race and Pong Doubles, but elicited controversy due to a racy advert depicting a man chasing a scantily-clad blonde, and a pair of spherical pink controllers that looked suspiciously like breasts. The questionable cabinet design was

George Petro, co-designer, Trog

How did the idea for Irog come about?

had recently spent at weakend with some friends! and, for some reason, well started playing the 'Dots and Boxes' game, it just clicked that this might make a cool videogame. Making the leap to cute dinosaurs was easy. Jack and I had just finished a twoyear stint working on NARC. which is the opposite of cutei dinosaurs. We were looking to try something different and family-oriented. The original prototype software used dots and bars drawn by me, and some billiard balls from the game Tri-Sports, Even without

cute graphics, the gameplay was furi.

Was it always your intention to make *Irog* a simultaneous four-player game?

wanted it to be a four-player game from the beginning. was a huge Gauntlet fan and loved the way that game handled four players. You mey notice some similarities: between the Trog cabinet and the Gauntlet cabinet

Were you disappointed that the original Dots and Boxes prototype, where players pleced bones to direct their dinosaur, never officially got a release?

was... the basic problem is that we created a cute game to appeal to kide with a more mature play mechanic, During lesting we found that kids really wanted to play but were confused because they keptill trying to control the dinosaur.

Much of the time.

we would find the game abandoned during play. Also, we found that adults were not initially attracted to the game. Once they started playing, they seemed to enjoy it. Eventually management decided that we were not going to massproduce the game, I said 'Give me four weeks to salvage all of the work. The version where the player controls the dino is what we ended up shipping. The working title for the new

What was the best thing about getting to design Trog? The effect it has on young players. More than 20 years after it was created, the garm still noids its appeal. My kids and all of their friends have grown up playing the Trog I have in my basement. That's a very rewarding feeling.

version was 'Pac-Trog'....

rather incongruous, and the black-and-white. game screen bore no resemblance to the dodgy marketing ploy, it was simply a representation of maze through which one player, represented ! by a square, pursued a second player, represented by a cross. The most interesting

aspect of the game was the fact that the maze layout continually shifted during play, making catching Player Two more exciting than it could have been, but the game received a less than : spectacular reception from the public.

The very first game to feature an environment that could be explored in three dimensions, Maze War, arrived in 1974 on the Imlac PDS-

1 computers at a NASA research centre in California, it offered a primitive deathmatchstyle mode where players, depicted by floating eyeballs, could wander through corridors and shoot at each other in a 3D space. It was, by all accounts, the birth of the first-person shooter,. more on which later.

Bally/Midway's The Amazing Maze Game, released in 1976, featured far more intricate maze layouts than Gotcha, and a frenetic two-player race to be the first to reach the exit. The game was produced by an external research group, Dave Nutting Associates, and took advantage of new arcade hardware.

PAC-MAN

■ The first universally popular arcade maze game, featuring full-colour characters and ghost-munching power-ups.

WIZARD OF WOR ----- LADY BUG ----- AMIDAR

■ A top-down maze-based shooter that supported cooperative play and sported a clever line-of-sight mechanic,

A Pac-Man derivative with walls that could be rotated, adding to the player's freedom of movement.

983

Cone of the first 'grid capture' games involving colouring sections of the screen by traversing them,

DANDY

■ This real-time Atari 8-bit dungeon featured multiplayer co-op play and was the original inspiration for Gauntlet,

980

--- RALLY X

One of the first maze games to: feature a scrolling environment that was larger than the size of the screen.

1981

1982

D Possibly the finest tunnelling arcade maze game, starring a polka-dot. wearing clown with a magic powerball.

985

3D MONSTER MAZE

■ An early example of a 3D maze game on a home system, programmed by Malcolm Evans for the Sinclair ZX81.

ROGUE 1

An early dungeon crawler featuring. turn-based play set in a labyrinth of interconnected rooms.

RETRO GAMER | 25

and technology to produce a stream of randomised maze environments. "In the early days of videogames in the Sixties and Seventies all hardware was solid state, meaning all logic: was predetermined," explains founder Dave Nutting. "These games had predetermined patterns that a skilled player could eventually learn. My group worked as an R&D team for: Bally Manufacturing, where we created the first microprocessor pinball game using the Intel 4-bit processor. With the introduction of the 8-bit microprocessor we immediately created the first 8-bit videogame system. My partner Jeff [Frederiksen] created The Amazing Maze Game in order to test out his new hardware design, We took full advantage of the power of our new logic, adding the element of infinity into our game designs, with no predictable patterns, as in the rules of nature or quantum physics. In The Amazing Maze Game the mazes were computer: generated and adapted to the player's skill level."

ega's Head On, from 1979, was an important title as it introduced the concept of collecting dots in a simple maze layout to clear each level. At the same time, players had to avoid head-on crashes with computer-controlled cars driving haphazardly around the maze in the opposite direction. The idea of negotiating a maze collecting dots and score-boosting items would of course form the basis of the most famous arcade maze game franchise of all time, but more on that later. One variation of the genre that became popular from the early Eighties: onwards was the maze or 'corridor' shoot-'emup. Tim Skelly's *Armor Attack,* released by Cinematronics in 1980, used a coloured overlay to depict a symmetrical maze layout, within which one or two players could wage war on vector-rendered tanks and choppers in jeeps. Stem's Berzerk took place in what was effectively

= [Arcade] Exidy's Mouse Traparcula calinet featured coloured] buttons that would open corresponding gates an acreen,

a giant maze formed from a 256x256 grid of randomly generated rooms. Gamepley focused on shooting robots and avoiding the impending approach of your hapless humanoid's nemesis, the smiley-faced Evil Otto.

Another classic maze shooter of the erawas Wizard Of Wor, which also included twoplayer co-op, and impressive digitised speech like Berzerk. Like The Amazing Maze Game it was designed by Dave Nutting Associates, and sported some clever features, such as its Defender-style radar scanner and 'line of sight' mechanic, "I got the idea for Wizard Of Wor from the movie Alien," recalls Dave. "A spaceship travelling about in space would be invaded by aliens. The ship had sensors that would monitor these aliens, but they did not know exactly their location until in line of sight. So in Wizard Of Wor I created a building with corridors and a location screen so you would know where the monsters were located, but not exactly where until they were in view. To get all the gameplay

elements on the screen I had to create the corridor patterns, although I only had space for 16 different ones. My programmer writing the actual code came up with the idea of adding the Wizard, hence the name of the game."

As enjoyable as games like Wizard Of Wor. were, it was dot-gobbling, rather than monster shooting that would really capture the attention of arcade goers in the early Eighties with the arrival of Namco's seminal Pac-Man. Despite being nothing but a spherical set of yellow gnashers, the game's iconic star, along with its quartet of goggle-eyed ghosts, suddenly gave the arcade maze game a sense of personality. Pac-Man's ability to turn the tables on the phantom foursome by chowing down a power pill gave players a sense of joyful empowerment, if only for a few fleating seconds. And the way the mazes were set up with escape 'warps' on either side of the screen (a feature they shared with Wizard Of Worl kept the flow of the game. just the right side of total inundation by ghostly death. Designer Toru Iwatani had conceived Pac-Man as an endearing, light-hearted game accessible to everyone from seasoned gamers to women and couples, and it worked. It became Namco's biggest selling arcade game of all time, inspiring a slew of clones on home systems like the Spectrum's Hungry Horace, the VIC-20's Jelly Monsters and the BBC Micro's Snapper. Pac-Man's success spawned countless sequeis, from Ms Pac-Man in 1981 to the more recent (and rather excellent) Pac-Man Battle Royale in 2011, Interestingly, while many followed the traditional formula the series is known for, it has been pleasingly rejigged over the years with genuinely innovative updates, including the aforementioned Battle Royale, which pitches four Pac-Men against each other, to the genuinely fantastic Championship Edition, that turned the extremely popular franchise into a frantic score attack garne. 🕨

661 got the idea for Wizard Of Wor from the movie Alien

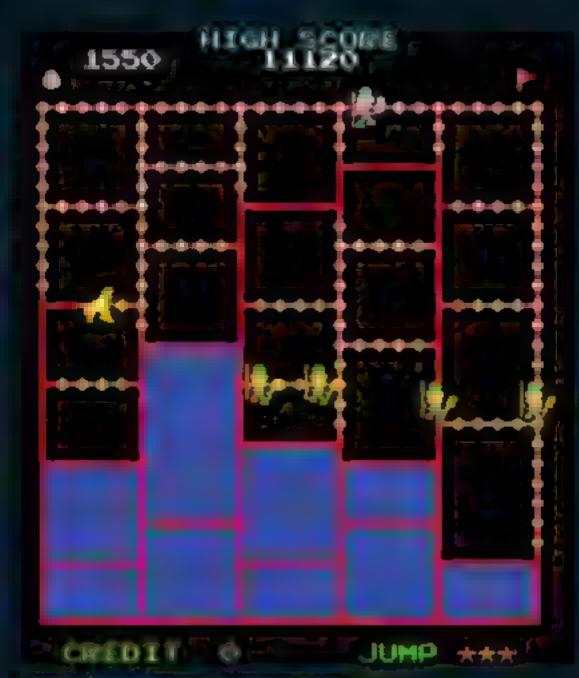

Dave Nutting

TROG

A four-player Pac-Man variant with great. graphics, pitting player-controlled dinosaurs: against cycloptic cavemen

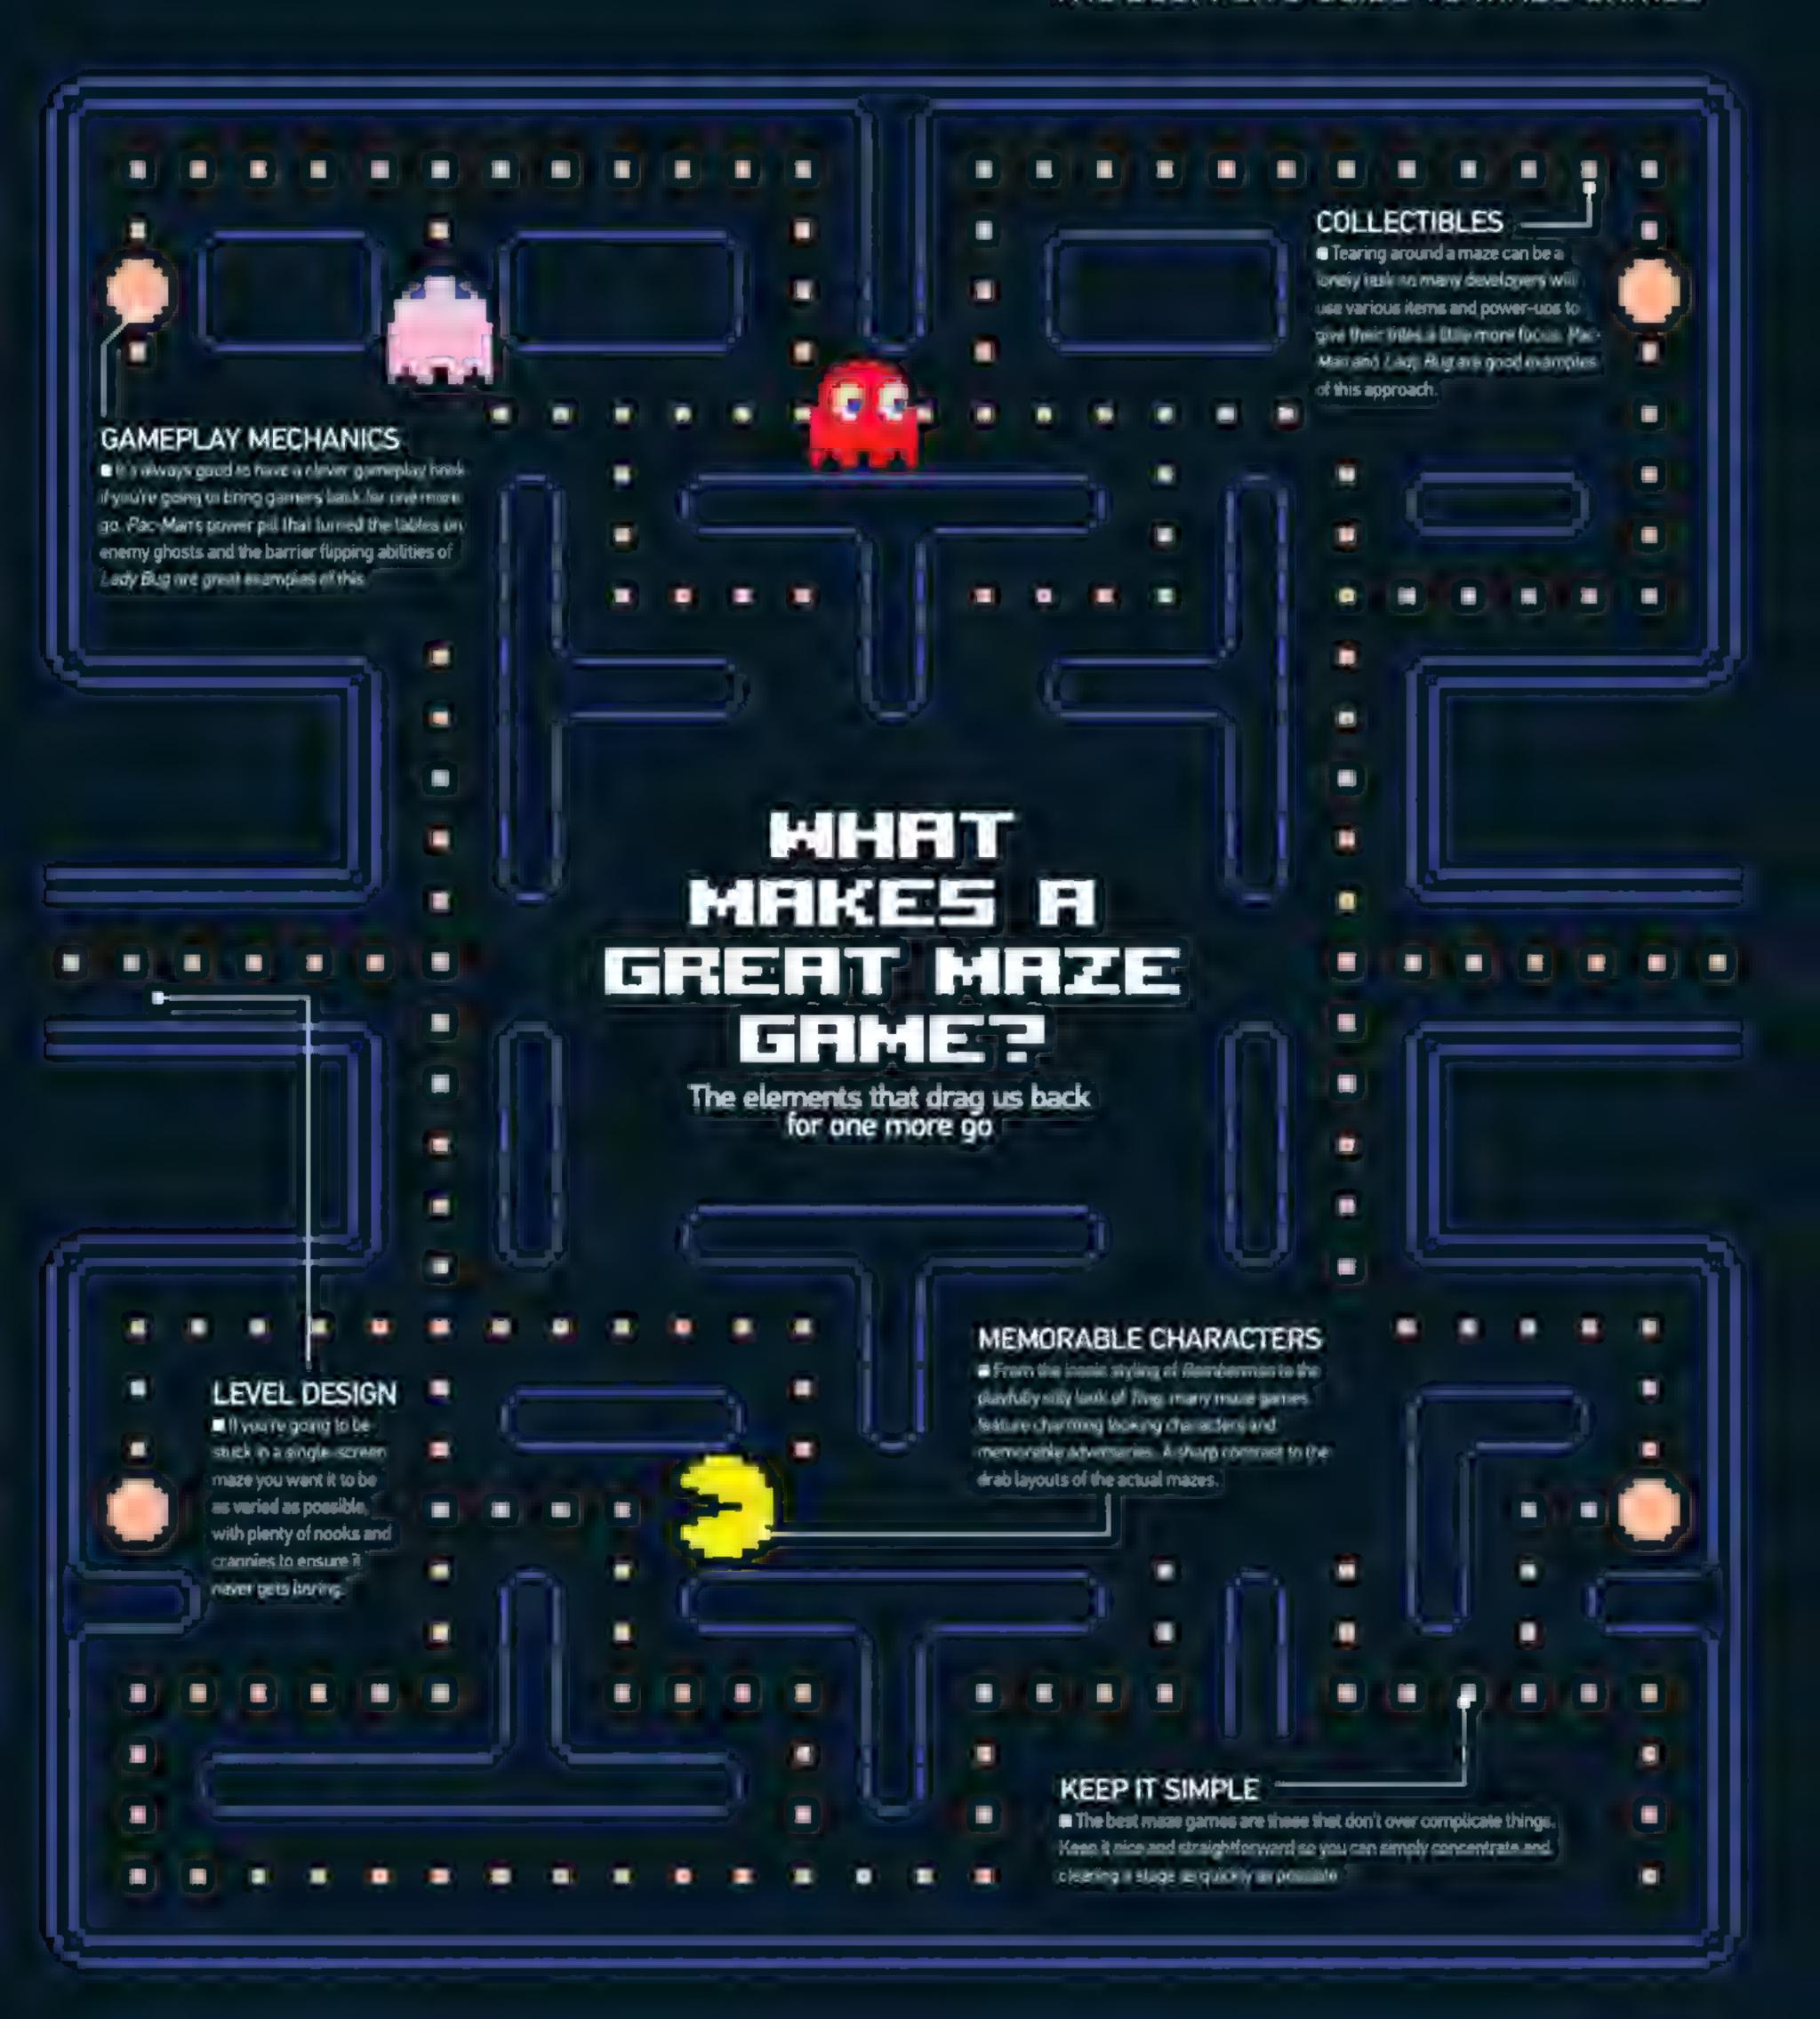

iii id Software's famous early first-person shooter was basically a series of mazes populated by Nazi mutants.

w [Arcade] Amidersow you in the role of a gient silverback garilla who enjoyed colouring in squares

GAUNTLET

One of the most popular Eighties: maze crawlers after Pac-Man, the coinop supported up to four players.

Feeling the need to gobble cherries, splatter Sno-Bees or blast hordes of ghosts? Then try these

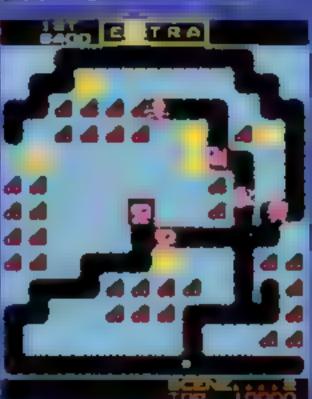

MS PAC-MAN 1982

while the first Pac-Man is obviously a timeless arcade game, this ferminine sequel took the original ingredients and made them even better, adding more maze layouts and smarter phosts. Plus the ribbon-nooring Ms Pac is easier on the eye than the eriginal yellow blob. If you like that sort of thing.

MR DO! 1982

Inthough not a traditional arcade in age game, Air Dol is still brilliant. With its clown here tunneting around the screen grabbing thermal chemies, zapping monsters with a bouncing ball, or dispatching them with strategically placed apples on the bonce, its arguably an even more injoyable game than Pac-Mar.

GAUNTLET 1985

Mizard needs food.... hadiy... Atari's iour-player Gaunifet cabenet was a maple of the Eighbes arcade, and the recipient of many a schoolboy's nocket money, as weutel-be adventurers in short-pants battled their way through labyrinthing dungeons teerning with grants.

closest you could get to a four-player
Pac-Men in its time, and remains

type due to Jack Haeger's brillien

Playmation graphics. Transforming
from cute ding to rayenous T-Rex to
deveur hapless cavemen, or each
other, never gets old.

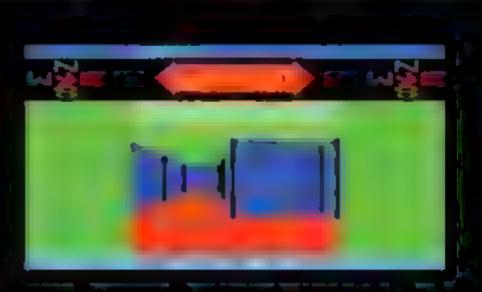

THE LAST GUY 2008

This effort from SCE I for the PST proves that it's still possible to come up with interesting ideas for the maze genre. As the titular Last buy you rush around the amazingly detailed real-world cities using thermal imaging to rescue civilians and pretect them from sombles. Civilians follow you Plicin-style. Imparing the more you rescue, the bigger they chance they'll get eaten.

This feminine sequel took the original ingredients and made them even better

While Pac-Man played a big role, there were plenty of other innovations for the genre in the early Eighties. Konami's *Tutankham* and Namco's Rally X introduced scrolling maze: layouts for players to travel through, offering hazard-filled Egyptian tombs and top-down city streets populated by boy racers. Tutankham was an extremely tough corridor shooter featuring a grave-robbing archaeologist armed with a laser. pistol taking on asps, vultures and bats, while grabbing treasure and keys to open up routes. to the next level. Rally X cast players as a racing car driver tasked with collecting flags scattered across a maze-like acrolling map while trying to evade the attentions of rival drivers, which could be stalled by using smoke screens. As with Wizard Of Wor it was notable for implementing a radar scanner for tracking the movements of pursuing enemies. The game inspired a clone called Rader Rat Race, produced by Commodore for its VIC-20 and C64 computers, where the player took the role of a mouse, the flags were replaced by cheese and the enemy cars by rats.

» [Ateni 8-bit] Wayout's 3D engine twee spectrouler for its time.

Tunnelling-themed arcade games like Dig Dug and the excellent Mr Dol could also be regarded as free-form maze games of sorts, with players digging their own routes through their screens, leading to the likes of Boulderdash and Repton, which integrated maze-like layouts into large scrolling levels. Sega's Pengo, which placed players, in the form of a cute penguin, into a maze made of ice blocks that could be shifted around or used as ammunition against a gang of rampaging enemies called Sno-Bees, was another variant on the free-form maze theme. A further offshoot was the 'grid capture' or colouring maze game, typified by Konami's Amidar and Exidy's Pepper II. Both titles featured mazes formed from irregular rectangles that players attempted to 'colour in' by moving around their sides. In Amidar you were inexplicably placed in the shoes of a gorilla. tasked with turning the screen blue while a number of what appeared to be spear-holding Zulu warriors tried to hunt you down. Pepper // was even more bizarre, with a googly-eyed

□ [C64] The creapy Scarabneus maked puzzle selving with exeding ghosts.

[PC] Blacking marratroopers saids, Wolfenstein 30 was really a just a storified mass confension same and an evolution of Afect War.

critters that resembled rejects from Space Panic.
Universal's Lady Bug was a clever twist on the Pac-Man style dot-muncher, sporting mazes with gated walls that could be rotated by the player's spotty insect hero. This idea was expanded on in Synapse Software's delightfully surreal Dreibs, which saw players controlling an eyeball on legs spinning gates to form coloured squares. Visions of deadly ghostly faces and 'kissable' maidens would appear in the parts of the screen the player had filled in, while enemies would plod around the screen trying to undo your hard work.

In 1983 John Palevich created *Dandy*, a dungeon-crawling action game for the Atari 8-bit home systems, which featured a pioneering four-player co-op system. Although John had never seen it, the game bore a resemblance to the earlier dungeon-crawl game with maze-like overtones, *Rogue*, although it was a real-time frather than turn-based title. *Dandy*'s dungeons consisted of a series of scrolling 2D mazes populated by monsters and treasure, and the

game's hero could defend himself by firing arrows at his foes. It was Dandy that would inspire Atari's arcade smash hit Gauntlet, the ultimate multiplayer fantasy maze shooter, which in turn birthed an army of clones for home. systems such as Firebird's Druid, Pandora's Into The Eagles Nest and Team 17's Alien Breed series. The same year saw the debut of the Atari's Crystal Castles, which starred a honeyobsessed bear called Bentley collecting gems across beautifully depicted Escher-like levels," drawn in an impressive isometric perspective. Another hugely popular multiplayer maze game was Hudson Soft's Bomberman (aka Dynablaster), While the original NES version of the game was a single-player title with the sim of blowing up Al monsters in a maze environment, later versions, such the PC Engine and Amiga ports, allowed unmitigated explosive multiplayer chaos. Combatants could cause pyrotechnic chain-reactions across the screen in an effort to eliminate each other, to much shared giggling and amusement, making Bomberman and its many iterations an essential party game at many a social gathering to this day, "

ne of the last Western arcade games to feature traditional top-down maze environments was Midway's Trog, the final released version of which was a multiplayer take on Pac-Man featuring 'claymation' dinosaurs and cavemen. However the first concept for the game was something rather more original, as co-designer and graphics artist Jack E Haeger recalls. "The actual mechanics of the game were based on the paper and pencil game known as 'Dots' and Boxes'," he reveals. "George Petro had brilliant ideas on how to make it a simultaneous four-player game, which in the original version gameplay was extremely entertaining and competitive. The original mechanics of Trog were unique - players controlled a floating 'hand' icon and did not directly control their dinosaur [instead laying 'bones' to set paths for their | avatar). Once players were fully aware of this and understood the essential 'cutthroat' strategy of the multiplayer game, it was a blast to play. Unfortunately, some players were confused (initially - thinking that they were supposed to be in direct control of the dinosaur, and that the joystick wasn't working...."...

KNDM3

After a hostile response to its suggestive dome-shaped controllers, Atari ended up refitting Golcha cabinets with standard joysticks.

Pac-Man's power pellets, which turned the tables on the ghosts, were inspired by Popeye chugging on a can of spinach in the TV cartoon show.

3D Monster Maze's programmer Malcom Evans managed to make himself jump in fright when the T-Rex popped up during testing, much to his wife's amusement.

Arcade sequel Ms Pac-Man wasn't developed by original creator Namco but by an American company, General Computer Corp.

5 Amidar was named after a Japanese lottery drawing game, Amidakuji, which resembles a ladder-like grid of rectangles.

6 Sauntlet designer Ed Logg
admitted that Atari's game had been directly inspired by Dandy in a speech at the 2012 Game
Developers Conference.

Ultimate's Spectrum releases like Atic Atac and Sabre Wulf were effectively giant mazes, influencing developers like Odin and Bubble Bus to create similar titles of their own.

8 Artist Jack Haeger sculpted Trog's dinosaur and caveman characters from modelling clay, before posing and digitising each of their animation frames by hand.

Tinkle Pit, a 1993 arcade maze game, features characters from previous Namco games such as Pac-Man, Blinky, and the Koopas from Dig Dug.

10 Mazes were a staple of Nineties graphic adventures – see the route to the Swordmaster in Monkey Island, or the Fireberry maze in Legend Of Kyrandia...

While the traditional arcade maze game was going into decline, apart from the occasional reinvention of Namco's Pac-Man franchise, developers were well underway on a different path, into the realm of 3D. As for experiencing the delights of exploring a 3D maze on a home system, one of the most memorable early examples was Malcolm Evans's 3D Monster Maze, released on the Sinclair ZX81 in 1982. This remarkable program generated random maze layouts for players to try and escape from, while knowing that somewhere in its corridors a hungry T-Rex lay in wait with open jaws.

Other good examples of 3D maze games on 8-bit computers include Sirius Software's pioneering releases Wayout and Capture The Flag, and Ariolasoft's atmospheric Eyptianthemed Scarabaeus on the C64. Originally designed for Atari's 8-bit home computers, Wayout, another 1982 release, was one of the first games to offer full movement in 360 degrees. through a maze, rather than the strict 90-degree turning system seen in games like 3D Monster Maze. Looking at Wayout today, its surprising how much the underlying graphics engine resembles. the one that powered id Software's seminal Wolfenstein 3D, produced nearly a decade later. The game's sequel, Capture The Flag, was equally groundbreaking, offering a split-screen display that supported two players, one attempting to infiltrate the maze and capture their opponent's flag while the second tried to catch them."

In the Nineties the maze became a staple feature of role-playing adventures like Dungeon Master, Eye Of The Beholder and Hired Guns. And of course with the advent of early 3D first-person shooters like Wolfenstein and the Jaguar's Alien Vs Predator, the maze became the stomping ground for blasting Nazis or acid-oozing xenomorphs, leading to the likes of Doom and the exponential rise of another massively popular videogaming genre. So next time you fire up the latest edition of Call Of Duty or delve into the intricate worlds of Dark Souls II or Titanfall, spare a thought for that little lost mouse in the MIT labs in 1959. While today's digital environs are light years away from the digital mazes of yesteryear, if it wasn't for him you might still be playing *Minesweeper...*"; 🗱

Arcade games that never made it home CON ESTED

MACH BREAKERS

□ Deseloper Namico □ Year, 1994 □ Genre Sports

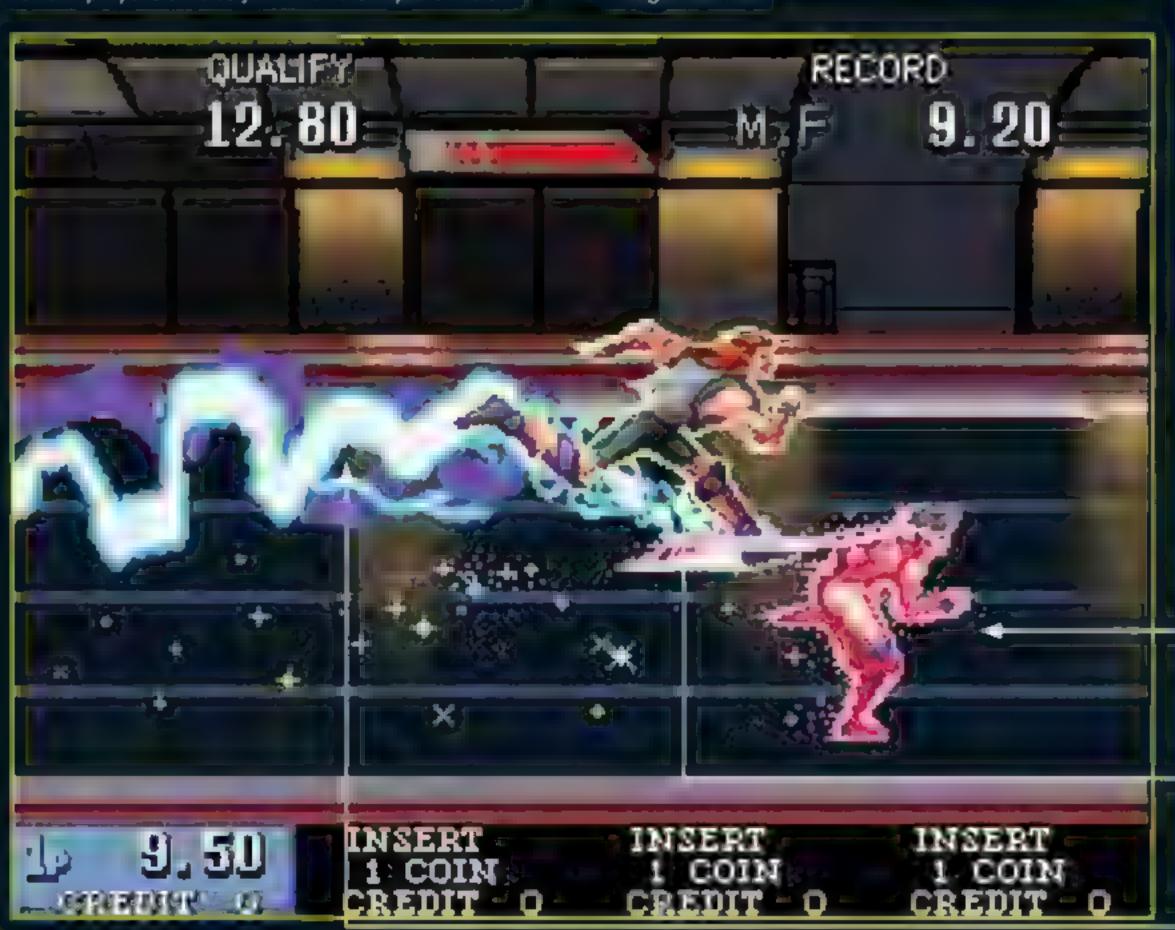

Were no longer enough for gamers – or at least, that was Namco's perspective. Eachewing the charms of real-world athletes like Deley Thompson, Numan Athletics was a cult hit featuring superhuman athletes. Namco was pleased enough with its performance that it quickly put a sequel into production, and Mach Breakers arrived the next year.

Mach Breakers offers players a choice of seven extraordinary individuals with ordinary names, like the American all-rounder Johnny and the Japanese speedster Makoto. They're pitted against each other in a variety of events, and while the opening sprint is just extraordinarily fast, things quickly turn bizarre. There's no 110-metre hurdles event here – instead your chosen superhuman needs to kick their way through thick walls of ice. Even stranger events await, from moneter-hauling to missile-chucking, and even miniature shoot-em-up sections that resemble a light version of Atari's classic Tempest.

It's a rather excellent multiplayer game, with up to four players able to join in and simple controls

This is aided by the game's structural improvements over the original *Numan Athletics*—events are now easier to pass and players are offered a choice of events after the initial sprint is complete. The game is visually appealing too, with the kind of gigantic sprites and scaling effects that had become commonplace in 2D games by the mid-Nineties. In fact, much of the game's appeal lies in the sense of humour conveyed by the visuals, as it conjures up some ridiculous sights. Our favourite is the Godzilla stomp that follows a failed monster-hauling session.

It's not hard to see why Mach Breakers didn't make it home, as it's one of those titles which clearly illustrates the differing expectations of the home and arcade markets – there's simply not enough content here to justify a home release, especially given the multitude of conversions that would have been needed in the generational transition of the mid-Nineties. It's a multiplayer classic that is at its best when swallowing coins, and we're glad that Namco recognised that.

CO-OO

TO COSTOR OF CONDITION

CONVERTED ALTERNATIVE

NUMAN ATHLETICS 1993

Mach Breaker's predecessor Numan Athletics is similarly awasome and features events including train-pushing and building jumping if you're looking to pick up the home release though, you might be in for a bit of a struggle it was released exclusively in Japan.

Hauling a Godzille-style monster along is one of the most impressive sites the game has to offer, but it's no pushover—precise timing is needed to succeed.

There's no joystick usage at all in Mach Breekers—every action takes place across the three buttons, with those on the left and right filling in for directions.

Characters are varied and play uniquely, with participants rated on their performance in speed and strength. Choose wisely to compensate for the events you're not so hot at!

It's clear that the athletes in Mach Breakers are more than just.
human, with mange-style superhero flouriehes accompanying many of the most impressive in-game actions.

BEST LEFT IN THE ARCADE LORD OF GUN

Developer: IGS - Year: 1994 - Genre: Lightgun shoot-'em-up

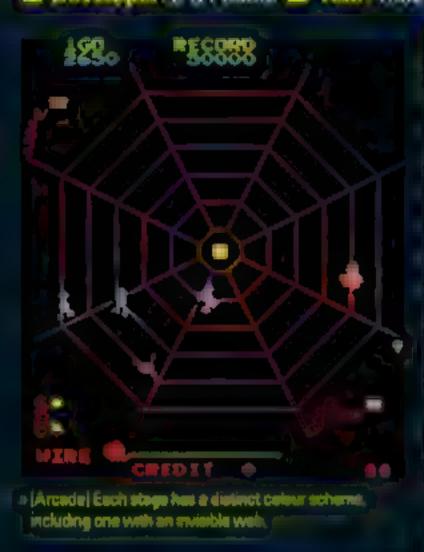

players, with each stage offering a different setting and new weeponry. However, almost every aspect of the game is laughably bad. The visuals are awful, featuring unattractive sprites with some of the most atrocious animations to have appeared in a Nineties arcade game. This would be forgivable if the game played well, but there is no semblance of a difficulty curve on show. Hostages are often identical to enemies, meaning that players will be relying on shouts of "I'm a hostage" to identify them—always a solid design choice in noisy arcades.

While Virtue Cop arrived in the same year as Lord Of Gun, it's a little unfair to draw a comparison between the two – they were developed for very different markets by companies in wildly different positions. However, it's harder to forgive the fact that Lord Of Gun struggles in comparison with Operation Wolf, a game released seven years earlier. By failing to recognise the advances made in the intervening years by games like Alien 3: The Gun and Steel Gunner; IGS doorned Lord Of Gun to irrelevance. Thankfully, the developer left the genre alone entirely in the following years.

HOT SHOCKER

Povetoper: E G Felaco - Year: 1982 - Genre: Maze

releases of the early arcade market. The game recembles Konami's early release Amidar, but has moved from a grid format to an octagonal maze that resembles a spider's web. You're tasked with avoiding enemies, while visiting every part of the maze with wire in order to connect phone lines and move onto the next level. Most of them move around the web and only serve to slow you down in order for the more lethal enemies to catch up to you but a lightbulb appearing at the tringes.

The main addition to the Amidar formula is that of a power-up, which gives your hero a temporary boost

will zap careless players.

in the form of speed and invincibility. It resembles an enemy with different colouring though, so it's easy to miss. Hot Shocker's failure to leave the arcade is easy enough to explain – as the only game manufactured by E.G. Felaco and a pretty derivative one, there was no mileage in licensing the game for home systems. And if you were a clone programmer, was there any sense in skipping the innovator to clone the imitator? No, there was not.

CONVERTED ALTERNATIVE

AMIDAR 1981

Amidar was the obvious inspiration for Hot Shocker, and is easily the more famous game. Konami's game was only converted to the Atani 2600 officially, but a large number of unofficial clones exist for a variety of formats including Cuthbert Goes Walkabout, Traxx, Crazy Tracer and Crazy Painter.

CONVERTED ALTERNATIVE

MIDNIGHT RUN 1995

As we mentioned, Winding Heat's predecessor did manage to make it home. A PlayStation version was released in 1997, exclusively in Japan. Be warned, though - before you rush to import it, know that the conversion is no classic, thanks to some jerky visuals and sloppy handling.

WINDING HEAT

Developer: Konami - Vear: 1996 - Cenro: Racing

Konami certainly waited a long time to follow up on Road Fightes—despite making its debut in 1984, a sequel didn't appear until the mid-Nineties. Luckily for fans of that sequel, the 1995 release Midnight Run, a new game was much quicker to arrive as Konami released Winding Heat just a year later.

large number of cars, with 14 available – each of which also has multiple tuning options. The excess continues in the on-track action, as while only four drivers take part in each race, they've got to contend with heavy traffic as the races take place on public roads, which bring to mind the mountain passes of the initial D series. Races are fun and frantic thanks to some track design that holds up well, but the handling is disconcertingly loose.

(Arcade) There might only be four recers, but the bettles are whereys intense on Winding Heat's mountain peeces.

With market preferences shifting towards more realistic racers like. Gran Turismo, areade racing games were having a hard time attracting attention in the console market. It's likely that Winding Heat didn't make it home for that reason – its predecessor, which did manage to reach the PlayStation in 1997, never gained much of a reputation.

he British gaming industry had to grow up fast. in 1983, bedroom coders were the norm, but by 1984, the market was dominated by professional software houses. 1985 saw the survival of the fittest, although it was becoming clear that small was no longer beautiful. During 1986, arrangements were made for US Gold to market games by Ultimate and for Elite to publish titles by Gargoyle. Meanwhile, similar deals were being made between other large publishers and small but respected development teams.

"I think we all became a bit more senous about things, but we still managed to have plenty of fun," coder Steve Wetherill repries when asked about Odin's big-money contract with Telecomsoft. His response is understandable given the agreement meant he, artist Colin Grunes and Odin's other teen developers would have to produce ten games for BT's software division within a single year.

"Heartland's development was commenced around the time of the Odin

deal with Telecomsoft, and I think it may have been one of the first titles released under that deal Dunng the development of Robin Of The Wood, on which Paul Salmon was the main artist, Colin had time to come up with an initial waik cycle for Bertie - the main character in Heartland - in addition to some other graphics ideas. Well, that's what we called him," Steve grins, before adding, "his full name may or may not have been Bertie Big Boy!"

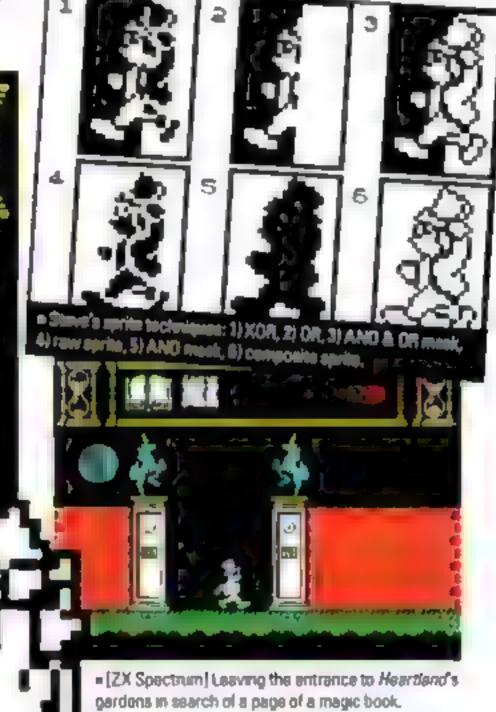

Early successes earned Odin Computer Graphics an enviable publishing deal with the BT-owned software firm Telecomsoft. Rory Milne learns how Steve Wetherill and Colin Grunes produced the 8-bit classic Heartland before the deal went sour

Teenage high-jinx aside, Steve clearly had a strong work ethic, which saw him move neatly from one project to the next in quick succession. "As soon as Robin was finished I began to experiment with dynamic mask generator code using the walk cycle I had lots of Berties walking left and right on the screen using the masking technique, and that really set the direction for Heartland. The masking technique was the cornerstone of the game - I wanted to be able to give a more solid feel to the sprites in contrast to how previous Odin games drew their sprites. In Heartland, Lused an 'AND

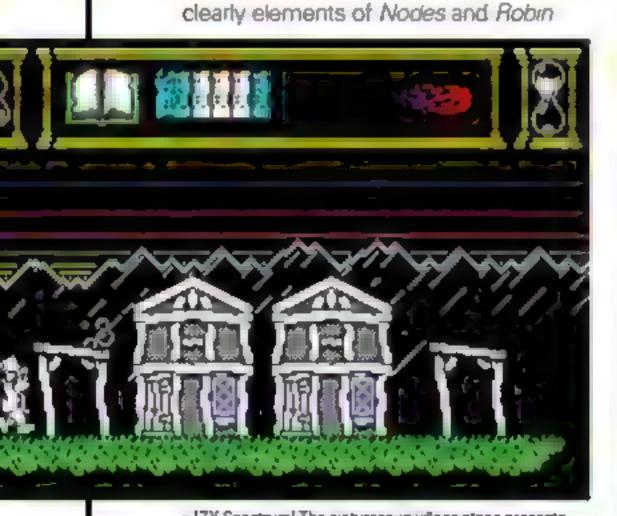

and 'OR' approach, which essentially used a 'cookie cutter' to remove all the pixels behind each sprite. This technique was quite effective in producing more solid looking graphics, but more CPU cycles were needed to draw each sprite. Additionally, storing this mask for every pixel doubled - on the ZX Spectrum – the amount of memory needed to store each sprite. The code for the game was developed on a BBC Model B computer with the Z80 second processor running CPM. Under CPM we used the M80/L80 assembler/linker combination, and the Memo text editor The Beebs had twin disk drives, so

tools would run on one and game code would live on the other. In order to get code to the Spectrum, we'd use one of a variety of downloaders. Graphics for the first level were designed very early on, along with the main Bertie sprites. The other graphics were developed in tandem with the game code and level editor that I created. It was a visual tool It allowed Colin to design room layouts and then move between the rooms. It could save and load data — I think we had disk drives for the Spectrums at this stage."

part from coding and pixel-art, Heartland's other design duties were shared between its creative partnership with the odd bitmap coming from Odin artist Stuart 'Stoo' Fotheringham, as Steve remembers *Colin and I worked together very well With Heartland, that was the first time we worked directly together as a duo-- Nodes Of Yesod was always more of a team effort - and it was definitely an iterative process, with ideas coming from both sides. It was quite productive Colin did art, level design and background fore. I did code, tools and gamepiay design. I think the gameplay evolved pretty organically. We tended not to do a lot of up-front design at Odin, not on details. So we would agree on the large stuff but then work out the details as we went along. Lots of things could drive the design, such as how many 16-pixe-wide sprites would fit into a certain space - for the number of pages to collect in the game. There are

» [ZX Spectrum] The picturesque village stage presents Heartland's wizard with a pair of portais to choose from.

in Heartland, in that it is room-based. The map is a lot less linear than either of those games, though, the screens being linked porta's in two directions. Some of the ideas I came up with for the much-expanded Amstrad version of Jet Set Willy showed up again here - the space section, for example, though that was also a nod to Nodes. There was definitely collaboration on ideas for art, but Colm did all the pixel work - with the exception of the things Stoo did I think Stoo quite possibly did a bunch of the in-game plants, and maybe one or two other things. I am reasonably certain that Colin did everything in Melbourne

Draw, though there may have been some sketches. It's amazing what could be done without a drawing tablet, or even a mouse1"

As Heartland's development progressed, Odin's operations were being scaled up to deliver the other games promised to Telecomsoft, which required relocation to bigger premises "Odin moved office in the middle of development of the game," recalls Steve, "though it was not very far. It was across the courtyard in Canning Place to another unit - the old Bug Byte office, as it happens. The new office was much bigger, and we needed the space for the additional developers we would hire. It was literally across the

breezeway from us, so we just carned our gear over one day "

Other than this break to change venue, work on Heartland was proceeding smoothly with the sprite technique at the game's heart performing almost perfectly. "The technique of generating the masks worked pretty well," Steve notes "Occasionally, there'd be a 'hole' in the mask if more than a three-pixel gap existed in the original art, but it was usually a quick job for Colin to fix up the error. One difficulty was fitting everything into memory. Game characters could go behind background elements, not just each other. That was challenging as the dynamic masks had

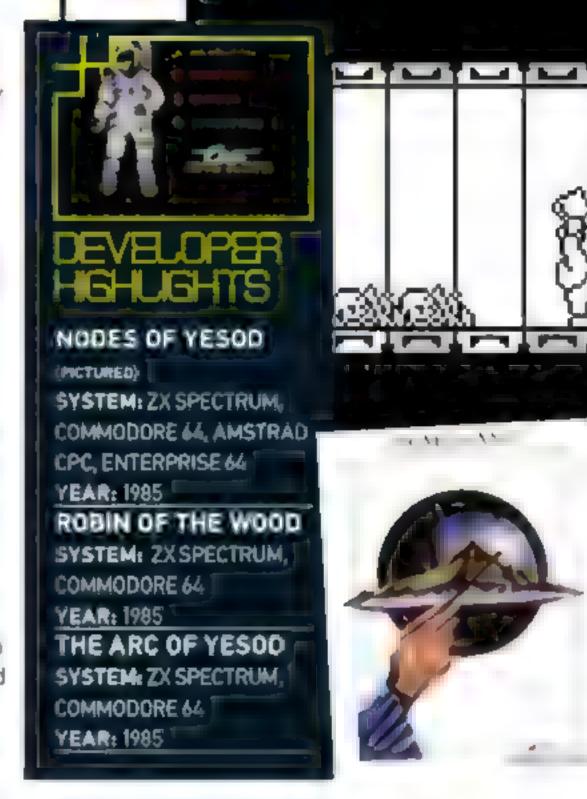

to be created for those elements too and they were quite large in places "

n (ZK Spectrum) it's two down, one to go as

idearthraf's winerd makes use of the fireboll moli.

Consideration was also being given to Heartland's plot ~ which would be as enigmatic as previous Odin storylines "It was very much a collaborative effort," Steve begins. "The graphics drove a lot of the back-story, certainly, but ideas came from all around. As each idea came up, we'd discuss ways to integrate that into the game. I'm sure there were ideas from other developers. and from Paul McKenna - our managing director I think it is reasonable to assume that the main character is - or becomes - a wizard thanks to the magic he is exposed to. He is certainly following in a wizard's footsteps "

As Heartland's main elements came. together, title music was composed and cover art was created by local artist Gerry Fisher - which Coan based a loading screen on - as Steve recollects "Keith Tinman did the music, I did the sound effects - such as they were The music player was an evolution of previous code that we'd used in Robin It was a two-channel player that made

OTHER ODIN OUTINGS Steve Wetherill's other games for Odin Computer Graphics

NODES OF YESOD 1985

SYSTEM: ZX Spectrum, Commodore 64, Amstrad CPC, Enterprise 64

■ The first game Steve worked on for Odin - and Odin's first game - Nodes Of Yesod is a polished platformer set on the moon that was influenced by Ultimate's Underwurlde, A team effort, Nodes still plays well today.

ROBIN OF THE WOOD

1985

SYSTEM: ZX Spectrum, Commodore 64

■ The one Odin game of Steve's that didn't feature pixel-art by Colin Grunes, Robin Of The Wood was artist Paul Salmon's baby. The game took inspiration from Sabre Wulf, but was still uniquely Odin.

ARC OF YESOD 1987

SYSTEM: ZX Spectrum, Commodore 64

■ This budget sequel to Nodes was completed in double-guick time using its predecessor's software engine Admittedly, it's more of the same. But when viewed as a refinement, Arc Of Yesod fulfils its remit nicely - it also looks better than Nodes.

SIDEWIZE 1987

SYSTEM: ZX Spectrum, Commodore 64

Now here's one that divided the critics back in the late Eighties. Basically, if you like pure shoot-'emups with extremely pretty visuals then Sidewize is for you. If not, then you may well not appreciate the game's simple charms.

CROSSWIZE 1987

SYSTEM: ZX Spectrum

■ Although Crosswize is not an Odin title as such, by all accounts Steve and Colin Grunes's follow-up to Sidewize is very much an Odin. Computer Graphics game in spirit if not in reality. It also features far more colourful and varied graphics than the game it eventually succeeded.

THE MAHING OF HEARTLAND

use of the fact that the Spectrum beeper could actually output two levels, so you could play two notes at once We didn't really have a good way of transcribing from musical keyboard to the game so I think there was lots of manual data entry involved. Gerry always did a fantastic job. He did the Nodes, Arc Of Yesod and Robin covers too. Colin did the loading screen, I remember him slaving away trying to get the attributes to line up with the hand and the planet!"

hen released, Heartland reviewed extremely well with special praise being reserved for Colin's stunning visuals. "It's always nice to be appreciated!" Steve says of Heartland's reception. "The game made an excellent impression due to the art from Colin "

Of the trio of conversions that followed, Steve advised on the C64 port and developed Amstrad versions to fit new art. "I had very little involvement with the C64 version of the game, other than some input on the data structures and graphics organisation, and then to answer any questions that came up with the code. I did the Amstrad ports both the cassette version and the disk version - and I had a lot of fun with that, I used Mode 0, which gave the game a chunky but very colourful look I worked from home for a few weeks during this, and it was a very productive time. Colin did the art. I did everything eise Even though the screen aspect ratio was different on the CPC. I made all the existing room layouts work okay with minimal changes - much to Coin's re left The Amstrad versions came. together very quickly. I especially like them - the frame rate is higher and the game is more colourful."

On the effect the Telecomsoft deal had on Heartland and the other contracted games, Steve explains Heartland's working title - 'Kimera' - was too sim ar to that of another Telecomsoft publication and that the contract provided the most pressure "As far as I remember, they had very little input on the creative direction for Heartland, 'Kimera' was really just a working title. I believe there may have been another game with a similar name - Chimera There was certainly pressure to complete games. We hired a bunch of people to help develop those ten titles, but it was hard to maintain quality and pace of development. What worked for one or two concurrent titles just didn't scale well to ten titles in a year. It definitely drove down the quality of the games, I think we were a bit naive trying to do good, fast and cheap "

On sequels, Steve reveals some unrealised plans "After Odin had closed, Coin and I pitched a game called Heart Of Yesod to a few publishers. This was to be an Arniga and Atan ST game that brought the worlds of Nodes Of Yesod and Heartland together It was something like Nodes Of Yesod meets Heartland by way of Namia - there was a wardrobe involved - and Mr Ben. Needless to say, that game did not get funded "

Given the last word. Steve offers a modest appraisal of the Odin classic that acknowledges the great job done by his old partner. "Thanks to Colin's art, Heartland is a very pretty looking game. Certain aspects of the control scheme seem overly fiddly to my 2014 eyes, and I wish the game had more of a piatform aspect to it, but I am happy with it "

Many thanks to Steve Wetherill for his time and for providing such detailed answers.

WIZARD WHEEZES

More games where you play as a wizard

THE WIZARD

MEMORABLE APPEARANCE: Atic Atac

Ultimate's Atic Atac also lets you play as a knight or serf. but who wouldn't choose to play as a wizard? And while the Knight's axe and, in addition, the Serf's sword are as: effective as the Wizard's magic, the ability to cast spells is iust cooler:

MAROC THE MAGE

MEMORABLE APPEARANCE Dispositive

Maroc first appeared in the arcade adventure Avalon, but the gameplay in its sequel, Dragontorc, is probably more accessible. For reasons unknown, Maroc's astral body remains cross-legged throughout both games and levitates to get around,

MEMORABLE APPEARANCE: Gauntlet

Ah, who can forget that immortal line from Atari's: Gauntier — "Wizard needs food — badiy!" Greedy wizard, We're only joking, Merlin was always a popular choicuirmong arcade-goers and looks quite dapper in his long vellow robes.

AXIL THE ABLE

MEMORABLE APPEARANCE Heavy On The Magick

Some clever blending of the text adventure and arcade. genres resulted in Axil The Able practicing the dark arts in Gargoyle's Heavy On The Magick. Axil's progress depends on conversing with various creatures of the night and summoning demons,

SABREMAN

MEMORABLE APPEARANCE Periogram

Khaki-shorted explorer, lycanthrope, wizard – where does Sabreman find these jobs? Regardless, 1986 saw him throw on some robes and a pointy hat in a quest to resurrect a mystical pentagram. He also learned magic and grew a beard.

ARCH MAGE

MEMORABLE APPEARANCE: Lords Of Chaos

An arch mage is the role you took in Julian Gollop's. turn-based role-playing game, but your character was only one of the Lords Of Chaos - rival wizards existed and they wanted you not to. And let's not mention ferocious: mythical creatures.

XAVIER PENDRAGON

MEMORABLE APPEARANCE Elemal Chargoons

Technically a warlock, but wizardly enough to qualify. Xavier Pendragon used a mixture of magic and martial. arts in Sega of America's Nineties Mega Drive beat-'em-up Eternal Champions, Xavier's speciality is Cane Fighting with

BIO RoboCop is generally considered to be one of Ocean's best film licences; perhaps its best... Carefully emulating the actual film (with a bit of artistic licence) it's a fast-paced shooter that sees RoboCop stomping through the gritty streets of Detroit dealing out. justice to anyone that strays into his gun sights. Widely acclaimed on all home computers at the time we've an obvious preference for the Amstrad version - it's not a direct port of the arcade game (although the 16-bit conversions) are more similar) but has its own distinctive identity. It also proved that when it came to espitizing the magic of the movies, no company did it better than Ocean. CLASSIC MOMENTS RoboCop PLATFORM: VARIOUS - DEVELOPER: OCEAN - RELEASED: 989 oboCop works so well because Ocean nailed the anarchic atmosphere of the movie. It's a visceral delight that's not only full of humorous touches, but also features some of the film's greatest scenes. This is no more apparent then when you take part in the mini-game. waiting for you at the end of stage one. You immediately encounter a woman who is being held at knifepoint by an attacker. Unlike the previous level, which was a typical side-on scroller, the action utilises a first person perspective and you must use your gun sights to take out the nasty thug if you've got enough energy you can simply shoot through the human shield and take him out, but you're playing as RoboCop and that would be in direct violation of his second directive. So instead you time your moments and shoot when the opportunity presents itself. It's tense, tough and amazingly well done. If you really want to show off you can aim directly for his nuts by shooting through her legs. Your move, creep *

times of war. One minute you're developing weapons for the defence of your homeland, the next you're working for your captor. to further subjugate your own kind. Such is the fate that has befallen the grandfather of our heroes in Midnight Resistance, But Data East decided that this wasn't a bad enough situation, so your grandfather hasn't just been captured by an opposing army - your whole family has been taken hostage, and the army is under the leadership. of a megalomaniac scientific genius known as King Comson. Oh no! Luckily, our protagonists are musclebound Eight es action heroes, armed to the teeth and ready to embark on a rescue mission

Midnight Resistance is a run andgun platform shoot em up that arrived in 1989, directed by Koji Akibayashi. Previously serving as a character designer, Akibayashi made his debut as a game designer with Heavy Barrel clearly inspired by Ikari Warriors While the choice of genre and use of a rotary joystick gave away the game's source of inspiration, it had a few unique elements of its own. Chief among these was the ability to collect keys dropped by defeated enemies, which could then be used to open chests for various power-ups

In much the same way, Midnight Resistance is evidently influenced by the success of Konami's Contra, sharing not only a genre but the 'beefy guys in vests' aesthetic However, much like Heavy Barrel, Midnight Resistance brings its own unique twist on the genre - quite literally, thanks to the game's use of a rotary joystick. The majority of games in the genre, Contra included, only allow the player to fire in the direction that the player is facing. Midnight Resistance has no such restriction, as the rotary joystick allows the player to aim independently of their direction of movement, an ability that becomes

of the genre, from the utility of the
three-way gun to the devastating
power of the flamethrower, but each

player can also equip a secondary backpack weapon. Fired by pushing Up and Fire together, all three backpack weapons are capable of doing massive damage over a wide area, but come with much less ammunition than your primary guns. Thankfully, losing a life doesn't necessarily cause you to lose your power-ups — keys and weapons are dropped upon death and can be collected again, alleviating the frustration caused by deaths in other games in the genre.

 [Arcade] Running alongside the jeep in the opening stage. You can also ride on it and mow down bad guys.

Midnight Resistance is one of Data East's most visually impressive games of the late Eighties, displaying some fine examples of excelent background work, particularly in the early stages of the game with the cityscape renders. The game uses very large enemies liberally from an early stage of the game - tanks in particular are a recurring threat, while the bosses include agantic buzzsaws and a battleship that stands defiant at three screens wide. There are some excellent set pieces, too - the opening jeep sequence is short but vital, the ambush by flying soldiers as you ride stage three's elevators is massively tense and the helicopter attack in stage five is similarly so

Midnight Resistance was one of a glut of rotary joystick games to arrive in the late Eighties – here are six more to try

were home computer conversions licensed by Ocean and developed by Special FX. Lacking the rotary joystick of the arcade version and limited to a single fire button, the developers had to get creative. The Commodore 64 version reverted to firing only in the direction the player was holding, while the ZX Spectrum and Amstrad CPC versions allowed the player to hold the fire button to stay on the ground while adjusting aim. The Amiga and Atari ST versions allowed the player to hold the button to adjust their aim, but without the useful autofire that the Spectrum version offered. However, the Amiga version had a trump card - it was the only one of the home versions to include a multiplayer mode. King

JIM BAGLEY

Programmer, ZXI Spectrum and Amstrad 142 6 2 4 4 9 ..

How did you get the Midnight Resistance gig?

I was working for Special FX at the time and we had just finished Cabat so Ocean gave: us our next arcade game to

port, Midnight Resistance Back then, our thoughts on how projects were chosen was that it was either due to the guys at Ocean not wanting to do a particular conversion, themeelves, or that it was just the next conversion rights! they had got in, and because we were now free after completing the last one.

Had you played the game much prior to working on it? To be honest, I hadn't heard of Midnight Resistance, or Cabal for that matter, before I was given them to do. I have played both of them: a lot now that I have both PCBs, and my daughters also like playing them too! Although with *Midnight Resistance, i* really should make a proper control panel for the rotary joystick.

riow did you try to implement Widnight Resistance's innovative control system?

We quickly decided against doing two controllers as: not everyone had one joystick, let alone two! And to nake it keyboard only using 16 keys for directions would have made it just uncomfortable to play and not joystick friendly, so we made it just hold the fire button to then rotate the gun around, which I think turned out to be the best solution overall

How long did the project take and what was the biggest technical obstacle?

t was typically three months from start to finish on projects. giving us time to get to play the game to the point where we could complete it. Thankfully it was set to free-play? Basically we played it until we could go through and complete it every time, allowing the artists to be able to medi out the levels, and baddles and baddy placements.)

"The biggest technical obstacle was that I wanted to: make sure we fit in *everything* that was in the arcade game, from all the weapon power-upe, and masses of bullets on screen, to all the cutscene sections and the nice end of game sequences

How do you think your conversions hold up today?

As a Spectrum game, it still stands up quite proud, as a lot of retro fans have said to me how great a game it was and still is

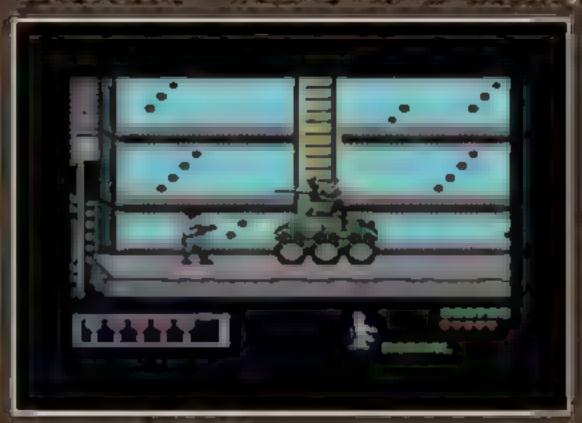

is there anything you regret doing?

Yes, not having time to do true Amstrad: conversions of the arcade. I have on my bucket list to one day do a 16-colour Amstrad port oil

Midnight Resistance, but that'll be after finishing the other things on my list of games to remake!

COIN-OP CONVERSIONS

Midnight Resistance has a relatively modest number of conversions – which of the six should you seek out?

Commodore 64

Of the six home conversions of Widnight Resistance, the C64 version is the one with the least visual detail. However, the system's strengths in other areas show scrolling is smooth and the SID chip delivers a great rendition of the game's music. Despite simplifying some sections and omitting others it's faithful and ranks as one of the great C64 arcade blasters

ZX Spectrum

The ZX Spectrum conversion wisely goes or a different look to the arcade game. neiping sprites to stand out against the detailed beckgrounds. While it doesn't boast the smooth scrolling of its C64 counterpart, the additional sprite detail is appreciated and the music on the 128K version = excellent

Mega Drive

he Mega Drive version of Midnight Resistance was the only one handled by Data East and while it plays well, there are some weaknesses. The level design is highly accurate and the controls are irst-rate manks to the three-button pad, vvhile Hitoshi Sakimoto worked wonders with the Mega-Drive's sound hardware However, the visuals are surprisingly weak

The Arniga conversion poasts the most faithful appearance, and while there are some small alterations to level designi and enemy behaviour. it plays well. Better yet. it's the only version to include multiplayer. If we had to pick holes. we'd note that the vasuals are a tad dark and some of the music is disconcertingly soft.

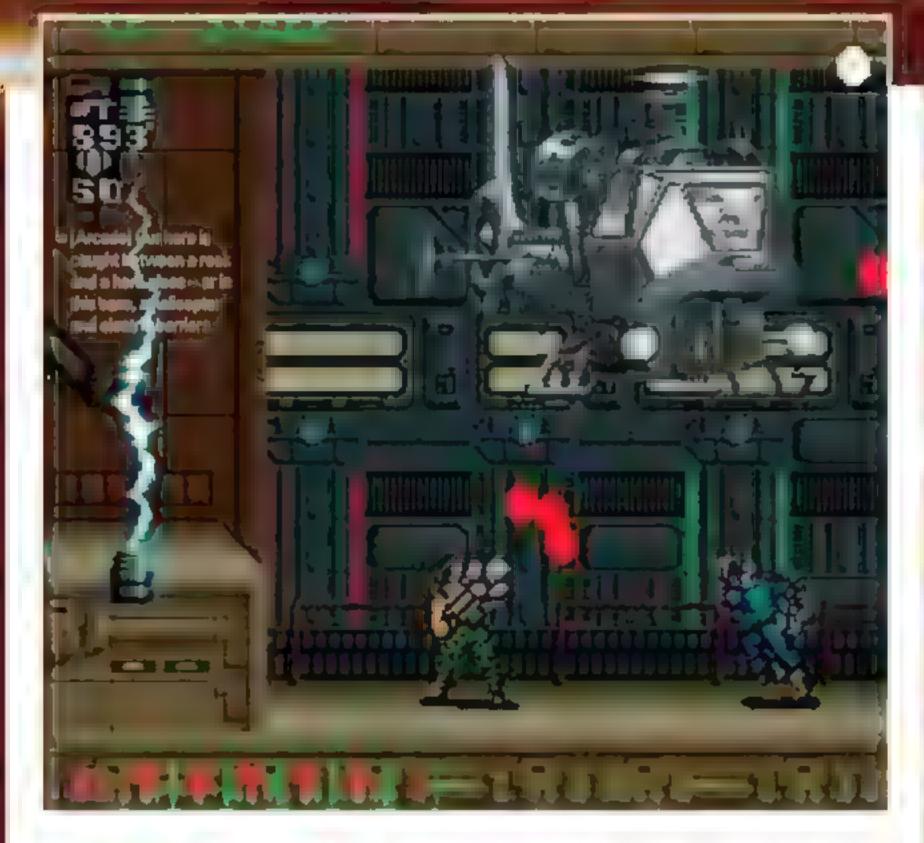

Atari ST

Joffa Smith's Atari ST conversion is differentiated from the Arniga version by isome weaknesses. The smooth scrolling of the Arniga version is replaced with lessi inttractive block scrolling. and while the Amige inflows the player to choose between music and SFX, the ST version. thas no music at all.

Amstrad CPC

The CPC is, as was so often the case, lumbered with a cut-down Spectrum port. Running in the system's nighresolution mode restricts the game to using only four colours. It also has no in-game music at all. It still plays well, but Jim Bagley wants to revisit this conversion one day: and we can see exactly why he does

66 I REALLY SHOULD MAKE A PROPER CONTROL PANEL FOR THE ROTARY JOYSTICK. 77

, 77 1 4 4

Crimson was remained to The Commissar in Ocean's versions, a feat made possible by the paper-thin plot of the arcade game.

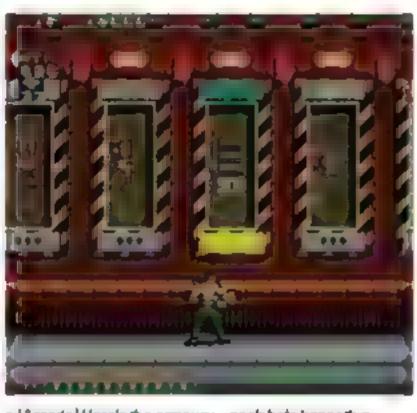

he other version is the Mega Drive version, which is unique in that Data East handled it n-house. Thanks to the console's three-button controller, control is a little smoother than onthe computer versions. It still didn't recreate the rotary controls of the original, but provided a button to fix aim, allowing players to move free y while maintaining their intended direction of fire. Bizarrely, the plot in the North American manual managed to change the majority of what little story had existed before. Renamed the Crimson King, our villain was a drug lord who kidnapped the protagonist's grandfather for his work

* [Arcade] Despite functioning as a mini-boss in the first stage, these tanks soon become commonplace enemies.

on a serum that would prevent the effects of drug addiction. Luckily, our hero – now known as Johnny Ford – was a member of the Narcotics. Control Agency.

Though Data East titles have occasionally been re-released since the demise of the company in 2003, Midnight Resistance hasn't seen an official release on any modern systems, leaving the six contemporary conversions as the main way for players to experience the game. It's a real shame - while there's still nothing out there that would correctly emulate a rotary joystick, we could see the game working rather well on modern controllers that have two analogue sticks as standard. Until the day when we finally get such an authentic version of Midnight Resistance, any of the existing versions should prove perfectly capable of keeping you up late 🛪

 [Arcade] Here's the armoury – each hole beneath a weapon represents its cost in keys.

How to withstand the fearsome firepower of King Crimson's forces

Missile Tank

Your first proper boss is a wide tank with a double set of weeds, which truncies left and right firing missies up the acreen from verious points along its body, it's a little tougher than the standard grunts and tanks you've faced up to this point, but in

Anny easily dispetched once you're acquainted with the operation.

How to beat it

Attacking from the top centure dengerous, so try getting underneath it and firing into the middle section from below, it is take longer, but it you're able to keep up with an anarges of direction it's the extent method.

Buzzsaw Ropol

After making your way through a heavily wooded area, five deadly buzzsews burst through the foliage. Detecting these reveals the one-eyed robot behind the attack; along with two more giant buzzsews on tracks, it's a bizarre contraction in King Crimmon's arsenal, but one that shouldn't pose a huge threat to out heroes due to its predictable attack patterns.

How to beat it

Shoot the buzzsaws to dectroy them, before taking out the central eye. Take adventage of the limited movement range of the buzzsaws, but be careful when timing your escapes from the corners of the screen against the larger ones.

Fighter Jet Squadron

King Crimeon gets serious, throwing a squedron of tenlighter jets at you. They're as speedy as you'd expect, flying across the screen in alternating directions, Every so often the squadron will make a background fly-past, showing you how many jets are left. Their impreceive speed makes them herder then previous bosses, but they're still fairly simple to take our.

How to beat it

The tricky part is avoiding the missise if they always drop degonally, so running away will give you extra time to lump. Weapone that don't require accuracy, like the three-way and noming mission, are best for taking out the jets.

Supercharged Soldier

Descending the Indicer Inside an industrial facility, you'll find this human weapon weiting at the bottomic and he's the stemest challenge in the game so fer, his floats up and down through his electric pod, letting loose with blasts of electricity. Complicating metiers, the ack of pistforms meens that our heroes are relient on the lection, harmpering mobility.

How to beat it

Take out the electricity beams by destroying the generators at the top and bottom of him pod. You'll eventually need to risk the ledder. Out the top and bottom of the screen provide lette points to take out some generators.

Battleship

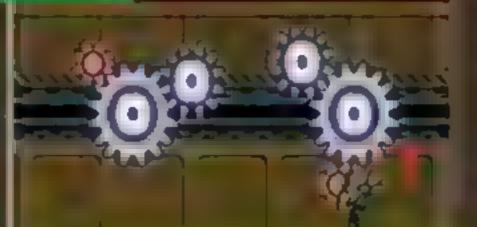

Moving into the fine portion of the game, you've faced with the daunting eight of a gigantic battleship, it's three screens wide and boasts 20 turrets if three missile! aunchers on each and and 34 guns in the centre. Juckly the missiles are easy to dodge, so quick-lingered players thand a chance of taking this one down.

How to beat it

This boss is a long only maximal income of making a mistakil while trying to evoid missiles and builets: You'll need to remove every gun on the ship intervious shooting at themselves, soil just keep shooting at them

DIFFICULTY B

King Crimson

the the big ted himself sint enormous floating head, werped by science. After lettempting to block your path with image of his own face, he joins the tight himself, verniting womes and brains at you. Even when reduced to just a brain, he keeps attacking, his is not the game's hardest boost, but is by far the most disturbing.

How to beat it

Mast him to remove his mask while decling with the fooder he spews out. Once that's off you'll need to aim for his eyes, she tine from is weak and

OFFICULTY 5

Gauntlet Of Gears

Involvental geers rotate at different speech eround a inter central geer, which moves left and right across the screen. Destroying the mein gear rewards you with a near-impenetrable swerm of requier grants, followed by two more sets of geers: friumph here rewards you with another enemy swerm and a near unavoidable three sets of geers.

How to beat it

Trice of geers are damaged by shooting the larger central gear. Try to concentrate your fire on one set on the second and third rune, to remove them early. Remember that you can crawl beneath the amelier locating gear.

Flying Turret

The gerne's penultimete bose take. The form of a floating our surrer.

segments, it aims some large ahots
of you and is one of the game's
brickier bosees as a result, but it's
the only thing standing between
you and your kidnepped family. This
is no time to give up the fight

How to beat it

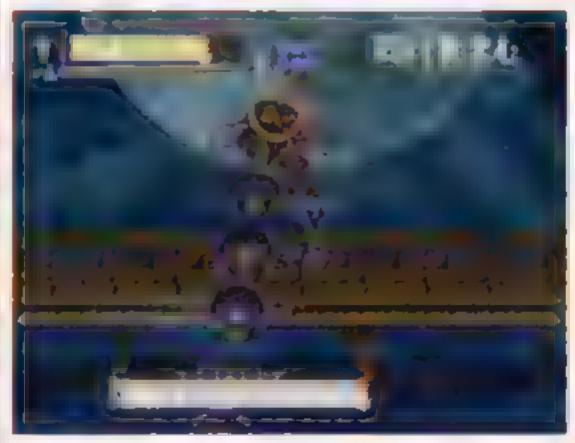

Avoid using your secondary weapons near the ledder, as you end up dimbing it and reducing your mobility. Concentrates your fire on the head jushooting the tall won't get you anywhere. When the turnet drops to the floor, get ready to jump!

» USAGI NA PANIC

The 'bunny girl' may be a US invention, but Japanese culture has co-opted the concept. This affection extends to games, and some even have bunny girls as their protagonists. Victor Entertainment's Keio Flying Squadron thlogy is a better-known example, but of equal note is Nihon Softec's Usagi Na Panic. The player's character in Nihon's scrolling platformer, Ramy, fights opponents such as penguins with a shortsword. To make progress, though, you have to master a dash attack and always look where you leap. This gameplay is unforgiving but not impossible. Usagi Na Panic's cute sprites are well defined and its tunes suitably playful

» SHINREI JUSATSUSHI TARŌMARU

Another Japanese rarity known for fetching high prices, Tarômaru's interesting combat mechanics are equally noteworthy. It's basically Shinobi with sprites over polygon backdrops, but the game's heroes have an unusual method of attack. Tarômaru's medieval Japanese world has two lead characters that fight with physic powers rather than martial arts moves. You battle demons, monsters, ninja and samurai – which favour physical attacks – but you fight back with a floating cursor that launches an attack on those you target.

» SON SON II

Like its Capcom coin-op predecessor, Son Son II is based on the novel Journey To The West—which inspired the TV series Monkey. Those familiar with the book or series will guess that the game gives the player a monkey-boy with a magic staff to fight through its colourful side-scrolling stages with There's also a fair bit of platforming required, and as Son Son's staff has a short range jumping around is often immediately followed by a face-to-face encounter with an opponent. To help with its end-of-level bosses, Son Son II provides a useful trading mechanic where collectable food can be exchanged for magic spells and staff power-ups.

MINORITY REPORT: JAPANESE WARRIORS

icrobatic and balletic. Kaze's moves theer speed and lightning reactions fillow the player to launch devastating attacks on his opponents by stringing together lethal combinations of dashes and slides, interchanging files and back-files, and performing throws and tiying kicks

Perhaps because of Kaze's appearance and the obvious ninjal connection is Kaze Kirl is sometimes compared to Capcom's Strices but this is misleading. Firstly, the titles are styled very differently; while Strices overwhelms the player with one itunning set piece after another Kaze Kirl is more linear and layers sound offects to build up a foreboding itmosphere. And in terms of storyline, where Strider Hiryu's ninjalitylings give him the appearance of being a stranger in a very stranger and, Kaze's story is set in a world far closer to the one inhabited by

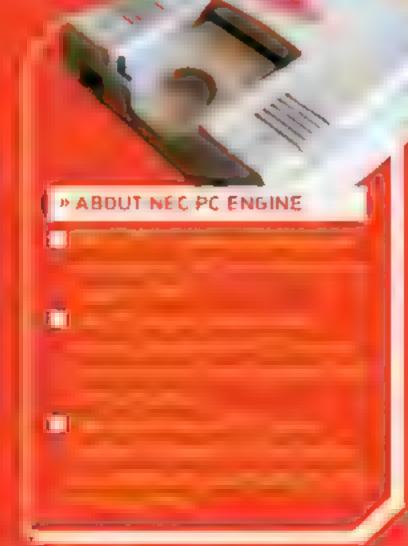

the ninja of old than one inspired by a fantastic futuristic take on the hinja mythos. Lastly, where *Strider's* visuals have a technicolor look *Kaze Kiri* favours a muted palette for its isprite and pixel and

These subdued graphics are a good fit for the game's low-key soundtrack, which sometimes even fades to complete science to allow the clash of metal on metal or a quiet breeze to have more impact. This subtle presentation provides a clevel contract to the game's trenetic nonlinear to the game's trenetic nonlinear to violence, but Kaze Kiri's greater charvement is that its controls are so responsive that you always feel like you're directing the action rather than playing a bit part

Laze Kiri perhaps doesn't quite inverse to the hype generated by its rand status and price tag + its gameplay will lack variety for some + but ill is an underliably stylich game that deserves greater exposure.

» GENOCIDE 2

This sequel to Zoom Inc's Genocide takes the basic mechanics that made the first game so much fun and puts them in a title where everything happens on a far grander scale. Added to the original's gameplay are platforming sections and interchangeable weapons. The sequel's sprites are more detailed, its antagonists more varied and its animation smoother. Its boss-fights are also far more impressive, with some encounters feeling more like set pieces. In fact, Genocide 2 is far more filmic in general, but while its stages are treated like scenes in a movie the brawling is just as relentless as that found in Genocide.

» SHOUNEN NINJA SASUKE

Kunio-Kun beat-'em-ups and resembling Konami's Ganbare Goemon titles, the feudal Japan set Shounen Ninja Sasuke actually has its own unique feel. Sasuke – the ninja you play – starts the game with a pretty decent move-set including a dash attack, flying attack and kick, but you can later claim the weapons or spells of defeated enemies. You really need to make the best of Sasuke's abilities as the game keeps you busy with mobs that attack en masse and remorseless lightning-fast bosses.

» VALIS: THE FANTASM SOLDIER

The Valis series tell the story of Yūko Asō – a schoolgirl who has sworn to protect Earth from demons. The "Valis" of the title refers to the sword Yūko uses in battle. The PC Engine CD Valis is an overhaul of the NEC PC-88 original and was the last Valis title released – it's also arguably the best Valis's scrolling action moves from hack-and-slash rumbles to projectile-based melees as you power-up Yuko's sword, and its challenges alternate between claustrophobic demon attacks and open platforming A great series in need of revival

KENSEIDEN

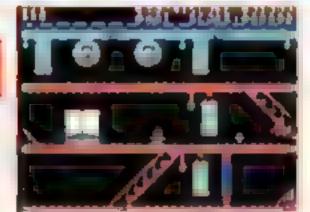

» F ICEA

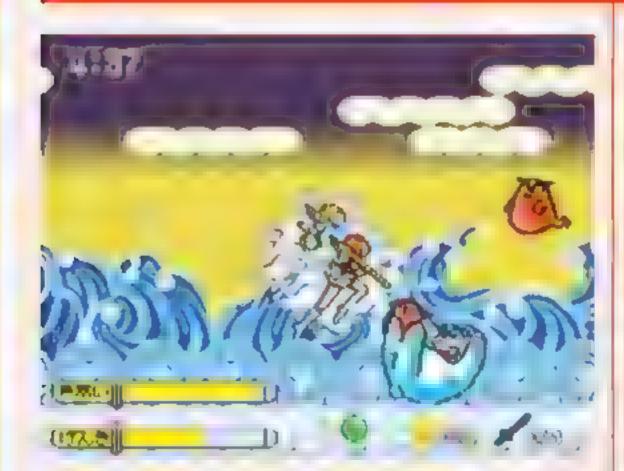

It's amazing that Kazuhiro Furuhata managed to coax slick animation and intense gameplay out of the M2-700 given its meagre capabilities. But with his scrolling hack-and-slash *Eugea* he did just that

» GANNPOITEN?

A simple premise sees you guiding a little ninja into a rival clan's stronghold taking out any opposition you meet along the way. The game offers a blend of platforming and shuriken-throwing.

» MAKERUNAI MAKENDOU

Makendou is another example of a schoolgirl taking the lead in a Japanese game. Specifically, Mai Tsurugino, who must defeat monsters using her magically enhanced skills in the martial art Kendo Unlike its sequels, Makerunal Makendou is a scrolling beat-'em-up with platform elements, which takes its due from Nineties anime with a focus on dute opponents and surreal boss-fights. But this presentation conceals challenging gameplay, so while Makeruna! Makendou's detailed but ridiculous monsters are amusing their effect on your health bar isn't

» KAIZOU CHOUJIN SHUBIBINMAN 3

This third entry in Masaya's Shubibinman series is arguably the best looking, probably helped by the fact that it was the only chapter developed for CD. And although the fourth instalment is a good-looking Super Famicom title, part three's visuals are that bit more vibrant. Shubibinman 3 sees the return of Tasuke and Kyapiko the android child heroes seen in the first two games. Like in the original, the game is a scrolling hack-and-slash that gives the player access to a beam weapon. Spectacular bosses and set pieces complement its demanding swordplay

» KYATTO NINDEN TEYANDEE

Created during the anthropomorphic fighter craze of the Nineties, Kyatto Ninden Teyandee is based on a Japanese animation. Since this was westernised – as Samurai Pizza Cats – it's surprising there's no NES version. This is a shame, because the title's visuals and animation work wonders with Nintendo's hardware. The game itself is a solid platformer that lets you play one of the cat fighters but also lets you control members of a 'Rescue Team' whose unique skills allow you to get through problem areas. The title's early levels are easy, but consider them a warm up for the tricky final stages

EDGE

» LUPNI

Admittedly, Lupin III's main character is more gentleman thief than warrior, but in this colourful outing the player has to fight for his life against the many dangers found in the game's sewers

the feedback production and

the production of the party of

» A ANT A LECENDOF ELLIF STAR

■ The beautiful though flawed Alantia riffs off

Space Harner and is a real achievement given its
host hardware, but its fining mechanism makes the
controls much harder to master than they should be

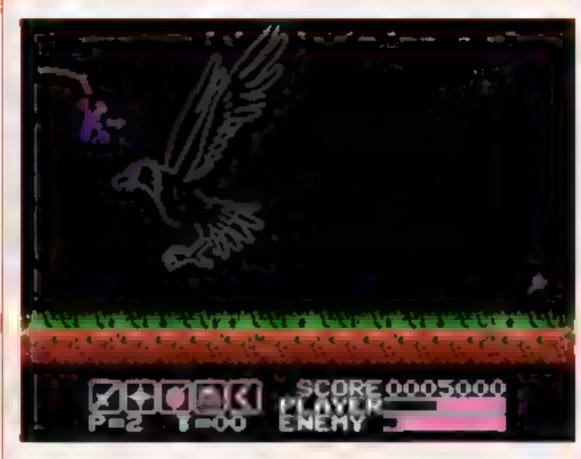

» RETURN OF THE NINJA

A spiritual successor to its 1990 Famicom ninja title Yami No Sigotonin Kage, Return Of The Ninja was Natsumi's return to the scrolling hackand-slash format. Natsumi chose bright colours for its title's sprites and a more subdued palette for its backgrounds, which really heips characters stand out from the scenery. In terms of plot, your ninja is on a revenge mission against a rival clan. His sword is your most effective weapon, although less-powerful shuriken prove handy. In order to master the game's branching levels, however, you need to collect tools to walk on ceilings and water, dig underground and gilde short distances

» SUPER N NJA-KUN

Ineage so it's simplest just to say that the earliest titles were UPL's Eighties coin-ops Ninja-Kun: Majō No Bōken and Ninja-Kun: Ashura No Shō. Super Ninja-Kun is essentially a 16-bit reworking of those titles with concessions made to difficulty. Ninja-kun is a diminutive warrior who dresses in red and favours the shuriken. Super Ninja-Kun is a polished scrolling platformer where Ninja-kun takes on an army of cute but deadly foes, but unlike the earlier games he can take a bit of damage and win new weapons. Super Ninja-Kun does, however, provide as much chaotic fun as the originals

» KAMEN NO NINJA AKAKAGE

Sixties TV series, but this Famicom adaptation was likely based on a late-Eighties anime inspired by Akakage's original incarnation. Kamen No Ninja Akakage is a side-scrolling fighter that allows you to power-up various weapons Gradius-style. The challenge is to pick the right weapon to best the particular troop of foot-soldiers or boss you're fighting – sometimes up-close swordplay works well, other times long-range attacks are more effective. Highly recommended

AWAKENING

AN ATARI LYNX RETROSPECTIVE

Back in 1989 Nintendo set the world alight when it unleashed the Game Boy. Mere months later Atari went one better with the release of the colour 16-bit Atari Lynx. Kieren Hawken remembers what made the system so special

riminally, there's not a lot of love for Atari's first handheld, with many seeing it as nothing more than a failure that simply couldn't compete with Nintendo's Game Boy.

While Nintendo's console did indeed soundly trounce Atari's system (and every handheld that chased after it) the Lynx remains an essential slice of gaming history, and one that shouldn't be ignored.

The Handy – as the Lynx was around August 1986 by Dave Needle and RJ Mical, who, at the time, worked for software house Epyx. They were better known as being two of the guys behind the hugely popular Amiga computer, so designing hardware was nothing new for them. The story goes that they drew up the initial designs on a napkin over lunch. Lots of ideas and revisions were thrown about over the next few years including use of a monochrome screen,

tape loading, infrared link-up and different processors. It was intended to be quite the beast....

Chuck Sommerville, the creator of Chip's Challenge and Zarlor Mercenary, was a member of the Handy team at Epyx and has amusing memories of the development process. "The prototypes were built on 4x4 sheets of plywood," he recalls. "They were covered with chips that simulated what the final hardware would do. There was sometimes ! fine of engineers waiting to try their work on the 'real' hardware. There was one guy who seemed to hog it a lot. We had a little sharp pointy thing we used to joke was

an accelerator to get him to move on. After the bankruptcy (of Epyx) the prototype was dismantled and nobody wanted the plywood so I took it home and repaired the floor in my bathroom with it!"

The eventual design of the system that became

the Lynx featured a 16-bit graphics chip, nicknamed 'Suzy', which could generate 4,096 different colours (the same as the Amiga) on a full colour display. And it was also able to scale and rotate both sprites and backgrounds, something that could only be found on the state of the art arcade machines of the time. The CPU was a 65C02, a variation of the popular chipfound in systems such as the Commodore 64, Atari 8-bit, NES and Apple II. But in the Lynx it had been clocked around four times as

fast as those machines so it could keep up with the custom processors alongside it. The 'brain' was aided by a 16-bit britter chip, a custom chip capable of complex maths to take some of the heavy load off the CPU. A blitter chip had previously been seen in the Amiga but this was the first time a console had featured such technology The set was finished off by 'Mikey', the Lynx's custom sound chip. The four channels of stereo sound were pretty standard for the time, but the ability to play digitised/sampled sound on all of those channe's without stressing out the CPU was not! The Lynx's hardware design was so far ahead of the competition you would think that Epyx had the next big thing on its hands right? Of course, history tells us that that wasn't the case

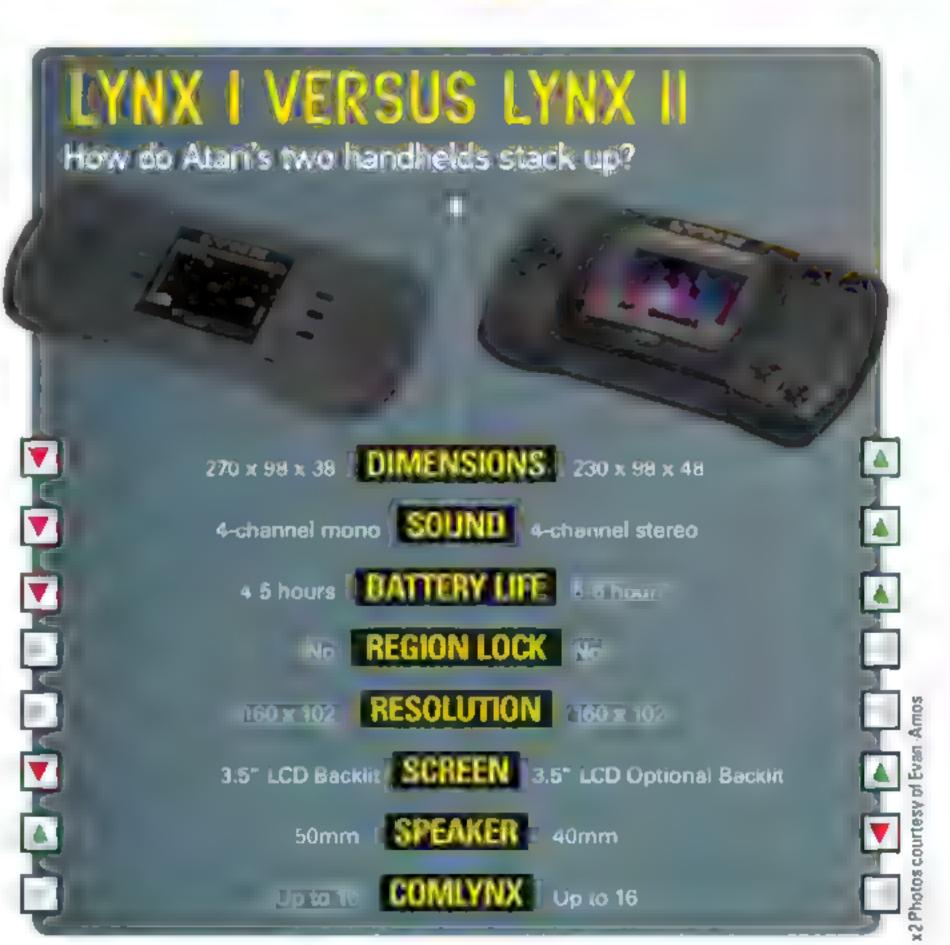

Not having the finances to launch it itself, Epyx touted its new Handy console to all the big companies, starting with Nintendo, its eventual competitor and Sega. But after several polite answers of "no" it was left with just one company - Atari, Jack Tramiel's company was still a big name in the gaming industry but the folks at Epyx were well aware of what Atan's illustrious leader was like to work with, so the publisher really was a last resort. Chuck remembers the day he was told that Atari had purchased the system very well. "At first I was really concerned, because my boss was upset about it. Apparently he had bad history with the Atan management." To be fair Atari did try its best to smooth over these relations, as it was really

impressed with the Handy and knew it had a winner on its hands. "Later we heard about how Atari was trying really hard to make things right for us," continues Chuck. "I was very hopeful that things would turn out well, because Epyx had basically run out of development money, and we had few options left."

After Atan agreed to buy the Handy from Epyx it went through a couple of name changes, as the coder of Gates Of Zendocon Peter Engelbrite remembers "For a brief time Atari had named it the Atan Portable Entertainment System, When I pointed out that the acronym would be APES they dropped it." He also remembers an alternative name to Handy, though "There was a time when the project was still top secret, even within Epyx There were security locks on the doors to the Lynx development area and the Nuclear Toaster was actually the official name for the project!" Eventually Atan settled on the name Lynx, a nod to its ability to link up with multiple machines, rather than a reference to the big cat of the same name. It was actually nothing more than a coincidence that Atari's next two consoles were also named after felines. with the Panther being named after the Panther Kailista sports car and Jaguar following exactly the same theme

The Atari Lynx was officially aunched in the United States on 1 September 1989, just two months after the Game Boy had hit those same shores. While it offered a full colour screen along with the impressive

FOR A BRIEF TIME ATARI HAD NAMED IT THE ATARI PORTABLE ENTERTAINMENT SYSTEM. WHEN I POINTED OUT THAT THE ACRONYM WOULD BE APES THEY DROPPED IT

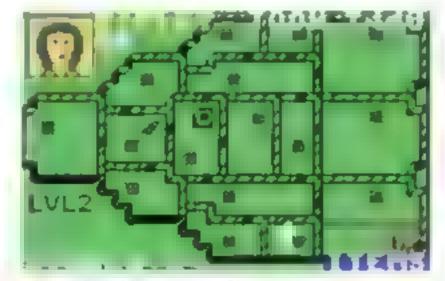

LYNK AWAKENING: AN ATARI LYNK RETROSPECTIVE

custom chips it was twice the size. twice the price and had considerably worse battery life. But despite this the initial reaction to the machine was a very good one with it being widely praised by the med a and gamers alike The system was packaged with the brilliant California Games and just three games were available on launch; the technically impressive After Burner clone Blue Lightning, shoot-'em-up Gates Of Zendocon and Electrocop More games started to appear through 1990 and Atan's console quickly caught the eye of those looking for a more powerful machine

he Lynx launched in 1990 in Europe with an eye-watering price of £179 99 in the UK - nearly double the price of Nintendo's console, Atari UK Marketing Manager Daryl Still was given the task of promoting the Lynx on this side of the pond and clearly remembers the first time he got his hands on one. "I seriously loved it then and still do. The step up technically from the Game Boy was huge " Daryl wasn't the only person impressed by the Lynx though, so were the people that Atari hired to be part of its new in-house. development team, D Scott Williamson was one such person. Initially hired by Atari to work on games for the Atari Genesis when the deal with Segafell thorough he wrote a game for the Atan STe, before getting to grips

with the Lynx, He certainly has fond memories of the console. "I've been programming since I was ten years old, [using] assembly language since I was 14 and was a lifelong Atan zealot," he explains. "Getting a programming job with Atan in 1987 was a dream job. Everything about the Lynx was so amazing, I leaped at the opportunity to work on it and dug in deep."

D Scott Williamson is behind some. of the Lynx best arcade conversions, having coded Roadblasters, Tokrand STUN Runner. He was only too happy to explain what it was like to code for "Architecturally it was way ahead of its time - portable, colour, networkable, left and right-handed, and those are just the design differentiators visible from the outside," he begins. "It had fast multiply and divide hardware, impressive multi-channel feedback circuitry for creating sounds, large copy protected cartridges and, probably most impressive to me, were the innovations in graphics. True bit-mapped graphics with hardware

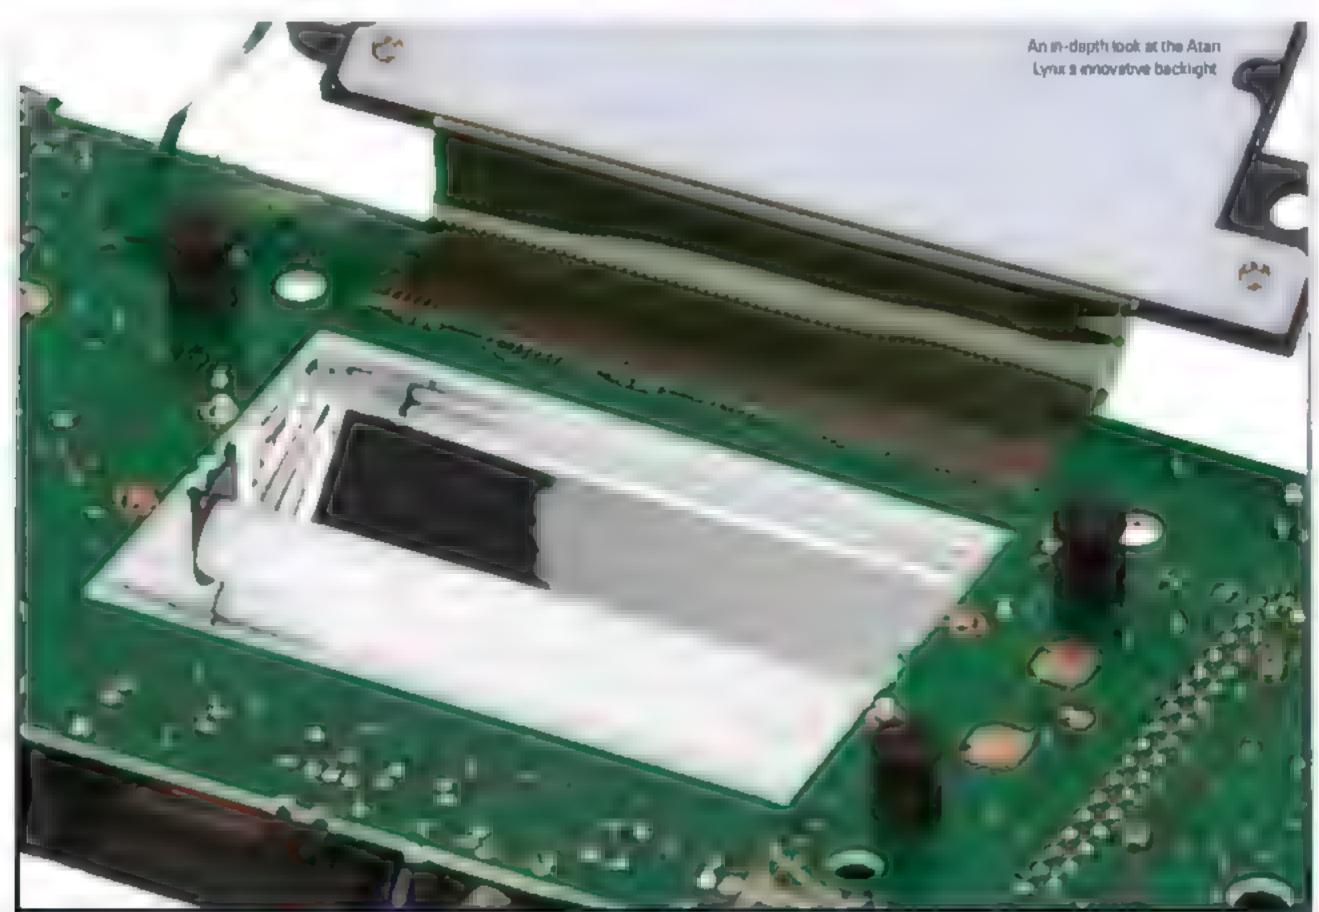

[Lyitx] Chris Milward's first Commodore 64 to Lynx conversion was the brilliant Alien.

collision detection; the ability to draw compressed sprites with skew and scale, which can be combined to do rotations and lots of other graphical tricks. It was possible to render thangles and real 3D models on the platform for games like Hard Drivin' and Steel Talons. The scalable compositable sprites allowed me to make the winding roads in Road Blasters and tunnels in STUN Runner As if the hardware wasn't enough, it was the first game system I used that had complete documentation and a full SDK, including sample code for each function of each subsystem. On top of that there were tools, not just compilers and specs to create graphics sound effects, instruments and music Full mature systems. The development environment was on the Amiga the first windowed game development environment I had used - which meant for the first time I could edit code. compile it, and debug it, all without exiting one application to load another as was the case in DQS previously.

[Lyrix] D Scott Williamson's STUN Runnerhas to rank as one of the finest conversions of the popular coin-op.

SONGBIRD PRODUCTIONS

Carl Forhan's company publishes both new homebrew games and unreleased prototypes

What led you
to setting up
Songbird and
publishing new
Lynx games?
When I found
the Lynx in thei
mid-Nineties, the

nternet was young and Usenet was acce to hang out. I tound some posts from Atan hackers on one of newsgroups saying they had found a load code to Lynx RAIV port. I just thought that was a laughably trivial game called Pongs, which you can had had he on on the interwebs

After that I really dug into the Lynx hardware and learned houself create sounds, utilise stereo, and discourse the Lorite engine.

What do you think made the Lynx

The hardware engine that moved cales and animates objects on the moved and the multiplayer capabilities were very ahead of their met finely, they had some really well done arcade ports, everything from Xenophobe to Ms Pac-Meri

How do you feel about the way Atari handled the Lynx?

place, while the acreen, graphics and audio were vestly superior to the Nintendo Garne Boy, Nintendo got the big name licences like Tetris and their own Mario and Zeldin

Do you have any plans to release more Lynx games in the future?
While I would like to release more games, it's getting much harder to find the hundreds of hours needed to program. I have one Jave game complete with graphics which I'd like to port to the Lynx, and several ideas for sequels to other games.

("ve already published.")

SERIOUSLY LOVED IT STEP UP TECHNICALLY FROM THE GAME BOY

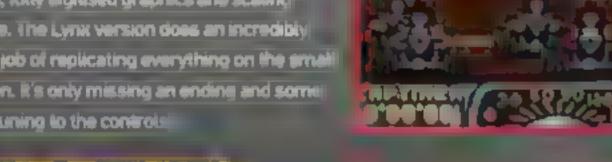

THEN AND STILL DO. THE WAS HUGE

POTOTYPEROWER

The cancelled games that had a new lease of life

ROAD RIOT 4VVD

A conversion of the technically impreserve Mari arcade game of the same name. Thei coin-op used a custom cabinet with joiling seats, fully digitised graphics and scaling galore. The Lynx version does an incredibly good job of replicating everything on the small screen. It's only missing an ending and some ine-tuning to the controls

LIEN VS PREDATOR

AVP was the Jaguar's killer app and the hrst game in the popular franchise but many people are unaware that it was being ported to the Lynx, it was about 50 per cent complete: when development was stopped on all Lyna projects to concentrate on the failing Jag. It's a trying sharne it was never completed because he prototype shows real promise

MARLBORO GO

This game is a really strange one for a couple of reasons. Firstly because it ponsored by a tobacco company and secondly because the game, along with a oustomised bright red Mariboro Lynx, was given away to a small selection of company mployees. The actual game is a rather fund ide-screlling bike races

LODE RUNNER

The Lynx version of Lode Runner was originally going to be published by Telegames but was never completed and forgotten about ntil a prototype version looked a few years ago. The Lynx game is a port of the Atari 8-bit version and retains a very similar look and feel. The only thing missing from It is the sound.

EYE OF THE BEHOLDER

There was a lot of excitement around when it was announced that this Advanced Dungeons & Dragons game was coming to the Lyns. Despite being complete it was never released due to the high cost of the ROM and battery backup needed. The game has since had a proper release thanks to collector Eric Lief. on.

The development hardware was impressive too - the Howard board (named after it's creator) was darn near a logic analyser, allowing us to peek into the running hardware in real time, set source and data breakpoints, and do source level debugging. There was nothing like it from Atan, Nintendo, or Sega before that time. Dave Needle, RJ Mical, Steve Landrum and the rest of the engineers at Epyx really put together an amazing forward looking package that in many ways was a stepping stone to the 3DO hardware that came later"

Through 1991 the Lynx began to gain real momentum and this proved to be the most important year for the handheld. Firstly a series of price cuts that put it on level terms with the Game Boy and the newly released Sega Game Gear saw sales rise dramatically. Secondly the new games arriving like Ninja Gaiden, Road Biasters, Klax and Pac-Land started to raise the profile of the Lynx and it began to gain a reputation for its great arcade ports. But the biggest thing to happen to the Lynx this year was the complete re-design of the unit that evolved into what we now know as the Lynx II. This new unit was just over an inch shorter, had moulded hand grips, a backlight switch (to save on power when paused), screen protector and

the card slot was moved to the back as well as many other cosmetic changes, it's gargantuan compared to today's systems, but fitted in more with the handhelds of the time. Perhaps the most important features of the new Lynx were the reduced costs of producing it and the improved battery life that added around two hours playtime thanks to this refined technology (although it was still laughable when compared to the Game Boy)

Atan also stepped up the marketing and saw a huge increase in sales with the Lynx ending the year as one of the best seiling consoles in the UK. Atari was still running on a fairly modest budget compared to its rivals so had to pick its campaigns wisely. A tie-in with Wamer Bros saw a Lynx game released based on Batman Returns. which was set to be the biggest film of the year. The game was completed in time to release alongside the movie and a 15 minute long advert for the Lynx (and the game) was shown before the film in movie theatres. Daryl Still recails how this deal turned him. into an overnight VIP, "I remember going to the movie premiere in Leicester Square and hobnobbing with the likes of Bob Geldof and Paula Yates and Catherine Zeta Jones and John Leslie on the red carpet. The big issue with the advert was that it was

PC| Chip's Challenge has recently been updated in 30 for play on Steam and mobile as Chuck's Challenge.

all gameplay and when it appeared on the big screen the pixelation was somewhat extreme!"

he Lynx continued this momentum into 1992 with a steamy flow of games that kept up with the high quality points the Lynx was known for. Widespread success had eluded Atari though with a lack of third-party support and the Game Boy juggernaut taking over Come 1993 the writing was on the wall for the innovative handheld. Atari started to drop support to concentrate on the soon-to-be-released Atan Jaguar and cance led many previously announced games. The Lynx was left to fade away slowly as Atan had its one last shot at the market with the Jaguar before the infamous reverse merger with JTS. The Lynx eventually went on to achieve lifetime sales of nearly 3 million. An impressive figure, until you realise the Game Gear achieved 11 and the Game Boy over 118 (although that also includes the later Game Boy Color). "Sales were less than they should have been, that's for sure," explains Daryl. "The worldwide build was well into seven digits and they had all been sold into retail." But this was not the end of the Lynx, its fans were never going to let it die!

Third-party Lynx developer Telegames continued to support the machine after its commercial demise releasing a number of titles that were coded at Atari but never released such as Raiden, Hyperdrome and Fat Bobby Come the early 21st Century and the homebrew scene for the Lynx started to kick off when the BLL (Behind Lynx) Lines) development kit for the PC was developed. This saw people like Carl Forhan (of Songbird), Matthias Domin and Bastian Schick starting to play around with the machine. The first big homebrew games to be released for the console were Bastian's Tetris clone T-Tris and Carl's version of the classic Pong known as Ponx. As

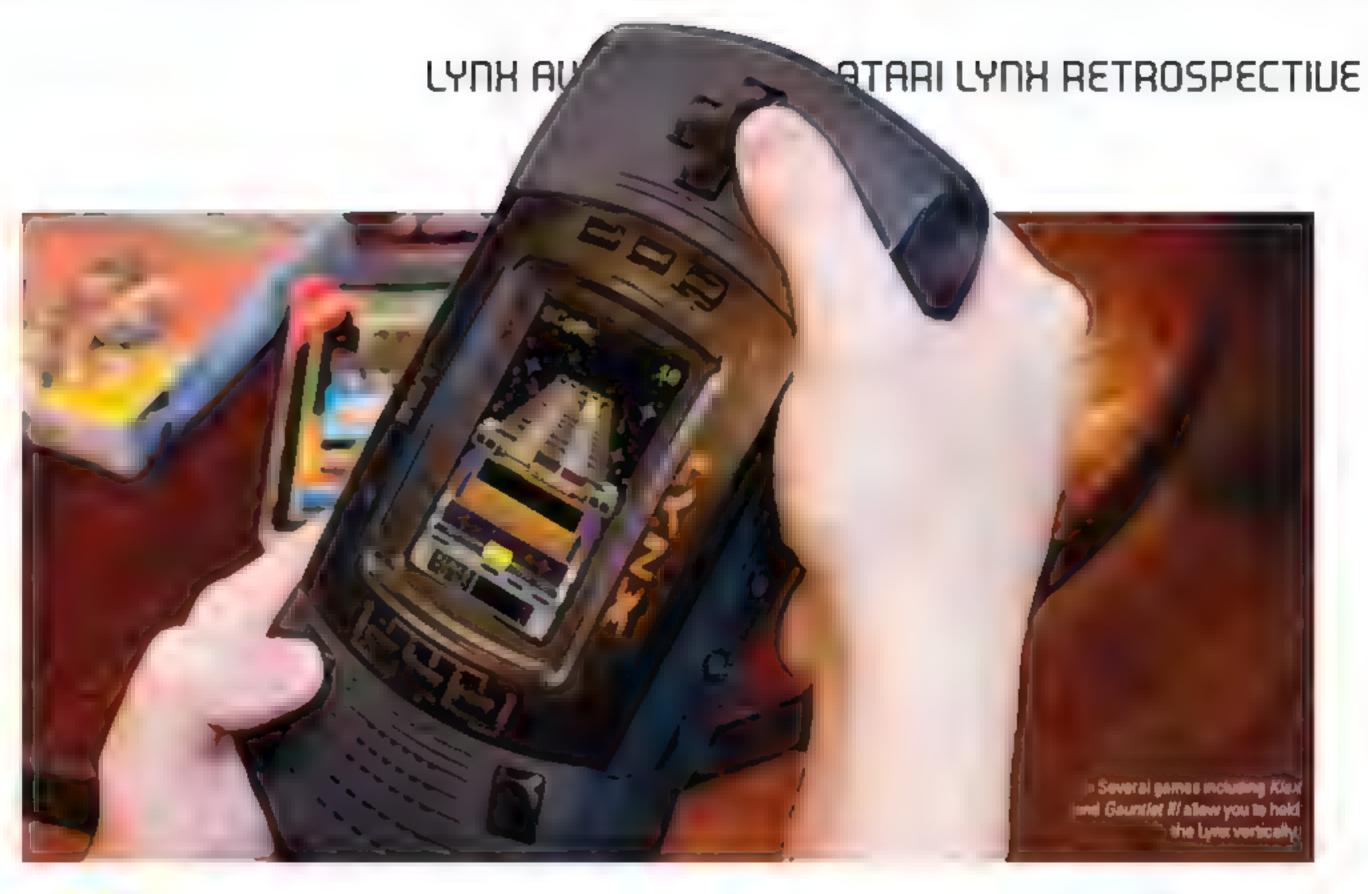

well as homebrew the newlyformed company Songbird Productions also joined in on the act publishing unreleased prototypes. From here the homebrew scene exploded and Lynx owners benefited greatly. Alex Thissen programmed Tiny Lynx Adventure, which received a favourable review in this very publication, and he is currently working on a conversion of the indie PC game Hack, Slash, Loot. But for the Lynx anniversary he has a very special announcement up his sleeve "I recently discovered an unreleased game on the development kit I got from former Lynx developer Robert Maidorn," he begins. "He created the game in 1993 just before Atari stopped releasing new games and liintend to release it to ce ebrate the 25th anniversary of the Lynx "

ris Millward is another homebrew coder to look out for, he recently converted the C64 version of Alien to the Lynx and is also working on his own Cabal clone called Lynx Ops. He is planning to release something special for the anniversary of Atari's great handheld. "I am currently doing a rewrite of Jack Attack, again from the C64, but this time in tribute to the late Jack Tramiel," he teils us. "I've got a dozen other games on the list too including some new IP which might be sold and some more free rewrites of C64 classics." Harry Dodgson is an old hand at homebrew having developed games for the Atari 7800 such as Combat 1990 before turning to the Lynx. We were keen to know what got him interested in coding for the console. "I was interested in the Lynx when it was first released," he tells us. "I had a few contacts at Atan from my 7800 homebrews and I paid the fee to get the Lynx programming

Six batteries power Atari's console They sadly won't last

tao tong enther

EVERYTHING ABOUT THE LYNX WAS SO NEW AND AMAZING, I LEAPED AT THE OPPORTUNITY TO WORK ON IT AND DUG IN DEEP

book. But I couldn't justify the price to get a development kit and there wasn't a way to test out programs at that time without one. When the Jaguar came out I thought about developing for that, but I realised my strength was 6502 code, not 68000 By that time, the cost for a Lynx development kit and a couple EPROM boards had dropped considerably."

The Lynx homebrew scene continues to thrive through passionate developers like Chris, Harry and Alex From the big commercial-quality projects like Zaku, Alpine Games and Championship Rally to the many tools, demos and fun mini-games developed

These have been made even more accessible by the release of the Lynx Flash Card in 2007. Designed by Bernd Thomas it has a USB socket for easy connection to a PC and makes both playing and developing homebrew games for the Lynx much easier. There is also the Handy emulator, available in multiple forms, that allows you to play and test homebrew ROMs. Although, it's worth noting that the emulation is not perfect, especially when it comes to sound, and it does have some speed issues but represents another good way to discover the world of the Lynx

So this leaves the final question of why the Lynx should be remembered, original release. Daryl Still offers up this forward thinking reply, "Well, it could be argued that without the Lynx showing what could be done with colour on handheld technology you'd not have the iPhone or iPad," he reasons. "Buy me three or four pints at some point and I'd have that argument with you, in any case!" It may seem extreme, but there's certainly an argument to be had that the Atan Lynx filled the hi-tech area of the handheid console market that would eventually go on to become occupied by the PSP and PS Vita D Scott Williamson thinks the

and why is it generating so much

attention, some 25 years after its

secret to the console's success is its software. "I think every game platform should be remembered for its games," he rightly tells us. "All the hardware, tools, examples, and sounds don't really matter if they don't entertain people and by that standard I think the Lynx was an exceptional platform. For me personally there was more to the Lynx, I think the Lynx stands out in videogame history for being one of the most forward thinking, ahead of its time game technology platforms. More advanced platforms came later, but I can't think of a single one that contained as many leaps and innovations in so many areas and in a way that was so well done. Working on it really was like working on videogames for the future at that time "

Special thanks to: Carl Forhan, Darryl Still, Peter Engelbrite, D Scott Williamson, Chuck Sommerville, Alex Thissen, Harry Dodgson and Chris Millward.

[Lynx] Gates Of Zendocon by Epyx's Peter Engelbrite was one of the launch games for the Lynx.

CONTRA

FORMAT: VARIOUS YEAR: 1982 DIFFICULTY: 8

or many, this is where the love affair with all things hardcore first began. Whether you played Contra, Gryzor or Probotector, you got the same punishing experience - a side-scrolling shooter that really makes you work for every inch of screen you managed to reveal. Contact with basically anything that isn't the ground is deadly in this grim war-torn world, but precise control and an array of weapons allow Bill 'Mad Dog' Rizer and Lance 'Scorpion' Bean (yes, really) to blast their way through all the same. Things can get even tougher when the perspective changes during base raids, pulling the camera behind you for an into-the-screen shooter diversion where it's not always easy to judge where bullets actually are.

As tough as the game may be, Konami actually made the NES version harder still with additional hazards. Drafting in a friend to help you isn't actually the safest of ideas - if one of you starts to lag behind, the other will find themselves surprised by off-screen threats and coordinating a good two-player run is surprisingly tricky with so much going on. Even with the help of the Konami Code for 30 lives rather than the basic three, few who call themselves gamers today have seen the credits to Contra. Later games have retained much of the original's hardcore purity, but it's this one that many will remember through a haze of smashed, chewed and dented controllers.

. [NES] The **NES port wes** surprisingly farthful to the com-op. retaining levels. weapons and most importantly difficulty

FAMOUS DEATHS

Even the best will have seen these happen...

Resident Evil 4

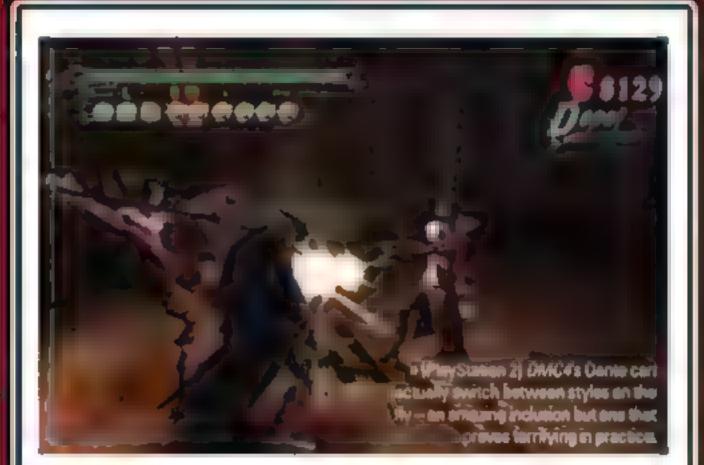

DEVIL MAY CRY 3: DANTE'S AWAKENING

FORMAT: PLAYSTATION 2 YEAR: 2005 DIFFICULTY: 10

e've often seen games have their difficulty levels altered when crossing from East to West or vice versa, but this is one of the most extreme cases. Devil May Cry is no walk in the park, yet Capcom decided that the default difficulty of the Western version should be the equivalent of Japan's Hard mode. If you never managed to get past Cerberus, now you know why - you were actually on Hard the whole time. Capcom addressed this for the Special Edition release but even so, Devil May Cry 3 on the harder difficulties is something only the best will ever beat.

INTO:OBLIVION

FORMAT: AMSTRAD CPC YEAR: 1986 DIFFICULTY: 9

his somewhat obscure Amstrad space exploration game by Stephen Curtis is a mapper's worst nightmare - the game consists of some 2,500 screens across 42 planets, making it almost impossible to complete without first spending hours on sketching out the layout. To make matters even worse, reaching the end of this sprawling maze without collecting enough Psyche along the way would still lead to failure, making this one of the most gruelling games we've ever played. Today, even just a basic black-and-white image file of the game's map takes up more memory than the game itself does...

SUPER MARIO BROS: THE LOST LEVELS FORMAT: FAMICOM DISK SYSTEM YEAR: 1986 DIFFICULTY: 8

t's widely renowned as one of the most accessible franchises in all of gaming, but Mario games haven't always offered players an easy ride. Later stages in most Mario titles tend to be pretty challenging to be fair, but this Japan-only sequel to the NES original sticks the boot in from the moment you hit Start. This comparatively obscene level of difficulty led to Nintendo deciding not to release the game outside of Japan, instead reskinning Fuji Television tie-in Doki Doki

We're not surprised in the least that Nintendo was scared to put this out following

Panic to be Super Mario Bros 2 in the West.

the huge success of Super Mario Bros—
the company had finally found its feet in
the games industry, so following the most
popular game with one that only experts
could really enjoy would hardly have been
the most sensible move. It's not just level
design that makes this sequel harder, either.
Sure, wider gaps and trickier platforming are
part of it, but that's before you factor in the
devious tricks that also came into play. Toxic
mushrooms, more aggressive enemies, warp
pipes that would actually send you back in
the game rather than skipping stages... it's
just plain rude.

TEENAGE MUTANT NINJA TURTLES

FORMAT: VARIOUS YEAR: 1989 DIFFICULTY: 10

sizes, but who would have thought that a cartoon tie-in could prove to be one of the most crushing of them all? Released the same year as the superior scrolling fighter, this half-shelled headache instead takes cues from the equally tough Zelda II (the Great Palace can do one, seriously) to combine top-down overworld exploration and side-scrolling levels.

Problem is, the hostile pixel blocks that attack you make getting through each area a nightmare, as do instant death hazards such as the electric cables in the river level or the weird car things that patrol the overworld. It just throws stuff at you until you can't take any more and collapse in a heap, sobbing uncontrollably. The PC version managed to make things even worse – redrawn graphics meant it looked better, sure, but a measurement error of Spinal Tap proportions meant that there was one particular jump that physically could not be cleared without cheating.

NINJA GAIDEN BLACK FORMAT: XBOX YEAR: 2005 DIFFICULTY: 9

Devil May Cry series or Team Ninja's modern Ninja Gaiden games sit at the head of the hardcore character action table. We'd mix that up a little by asking where Bayonetta factored into this fictional seating plan but when it comes to pure difficulty, it really does come down to this two-horse race. The simple answer is that despite so many similarities, the two games are surprisingly different – DMC is all about using super-tech cancels and dealing as much damage as possible, Ninja Gaiden is a much more defensive game, forcing dodges and parries rather than encouraging 500-hit combos.

Black remixed the Xbox-exclusive action game to include an easier difficulty in response to players who had moaned about the game's difficulty, but it wasn't quite that simple. Ninja Dog difficulty would basically mock players who chose it over the course of the game, while all of the other settings were tweaked to be more challenging and a whole new level, Master Ninja, added for those who thought they were Ryu Hayabusa reborn. We never even managed to beat the first boss on Master Ninja. Yeah, it's pretty rough.

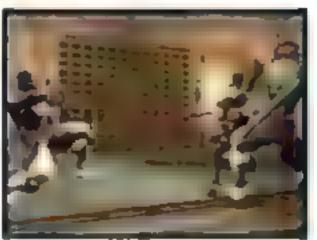

As much as Black is the height of the franchise's harshbut-fair challenge, it'd be plain wrong to omit the original Ninja Gaiden games from any discussion of difficult games. They fall more on the unfair side of things but still hold up well for anyone seeking out a challenge.

[Xbox] While Black introduced the simpler Ninja Dog difficulty, it also scaled up the rest of the skill levels accordingly.

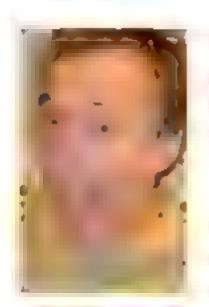

INTERVIEW

Eugene Jarvis on the difficulty of Defender

Did you intentionally go out of your way to make Defender realty hard? The reason you get into game development is to make the ultimate game, the game you

really want to play, that blows away all the limitations you see in the games out there I was no different - Defender was designed to be the ultimate game for me. I was the audience! So of course the game was too hard

How much play-testing went into Defender? Do you feel that the game is well balanced?

I had been practicing for six months, and players had to deal with all this shit, a joystick and five buttons, play Space Invaders with your left hand, Asteroids with your right and deal with crazy mutant aliens, all with zero warning. The fact that it actually worked was kind of a miracle. According to the stats the average player lasted 37 seconds. For three rives Total

What's the key to making people return to a hard game?

There has to be some kind of obsessivecompulsive drive to keep you running through the gauntlet. There has to be an ult mate payoff, or at least the illusion thereof Part of t can be an amazing audio visual experience la tour de force of pixelated pyrotechnics and devastating sounds which makes the Defender ride a not. But graphics and sounds alone are not enough. You need to tap into basic human instincts of survival, kill or be killed, bring out the inner neanderthal to rise to the challenge. Are you going to be beaten by a stupid machine?

Is balance important?

I think a huge key to the longevity of an impossible game is the right difficulty ramp. You need to ramp up to a place that is just a shade less than impossible, with just the barest probability of survival. Lots of play testing is key to finding this zone, a though it always boils down to a kind of feet or instinct of the last guy to touch the code. And then you fluctuate the difficulty in a wave-like fash on of challenge and relief, with lots of random events to keep it interesting

DEFENDER FORMAT: VARIOUS YEAR: 1980 DIFFICULTY: 9

warcade games during the Eighties were as intimidating as William Electronics' Defender. Created in 1980 by Eugene Jarvis and Larry DeMar, it silently challenged you with its scary | button setup.

Many arcade games of the time could be fairly simple affairs, typically comprising of a joystick and one or two buttons. Not *Defender* though. Jarvis's game featured five large buttons that just dared you to tackle them. One controlled your fire, another the smart bomb, while the third and fourth controlled your thrust and reverse. Finally, the Hyperspace button was your last ditch attempt. to avoid an ugly death (although this in itself might spawn you in a more dangerous situation). Thrust and Reverse could have simply been applied to the joystick, but that would have been far too easy. *Defender* wanted your quarters and you were going to have to master ever single aspect of it if you wanted to survive for more than a few minutes.

Mastering the controls was only half the story as the gameplay itself was just as difficult. Your ship zooms across a wrapped lunar backdrop in search of missing survivors that need to be protected from incoming invaders. The invaders themselves are unnervingly accurate with their shots and will also attempt to carry off your precious survivors. Let this happen and the invader turns into a far more dangerous mutant, with play continuing until all your survivors are dead (and the planet is destroyed, causing a huge ramp in difficulty) or you run out of lives. A handy radar, appears at the top of the acreen, but this in itself initially appears to be mocking you, taunting you by revealing the locations of jeopardised survivors, while showing you just how many invaders still stand in your way. You can shoot invaders to make them drop their precious cargo, but you're just as likely to kill the person you're trying to save.

Defender may be insanely difficult, but it has that rare element that constantly pulls you back. While it's tough, it's never unfair, and you always blame yourself for every pointless death. It remains one of the finest shooters around and while several sequels followed, none of them really lived up to the original magic that *Defender* offered.

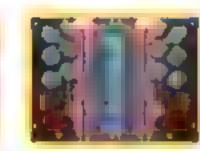

The invaders themselves are unnervingly accurate with their shots

DIFFICUTLY SPIKE

Every game has its ups and downs

DARK SOULS

moment gameplay is generally pretty tough, bosses really raise the bar – mistakes are mercilessly punished. One particular boss battle, Ornstein & Smough, is cited among the hardest of all time, and with good reason.

BATTLETOADS

Scrolling fighters don't tend to be easy, but this one is infamous for being borderline unfair. Make it past Turbo. Tunnel and things get easier, but not for long – there's not so much a difficulty curve here as a difficulty mountain range – it's all over the place.

IKARUGA

Treasure games are often tough, but ikaruga's unique colour-switching mechanic makes it an entirely new discipline to master Just surviving the tater levels is tough enough, so watch out when you come to play properly in search of a decent high score

FINAL FANTASY VII

optional bosses, chocobo racing and missable items, this one is all over the place. And while few would ever argue that Final Fantasy games are difficult, few would deny that this one had moments of frustration.

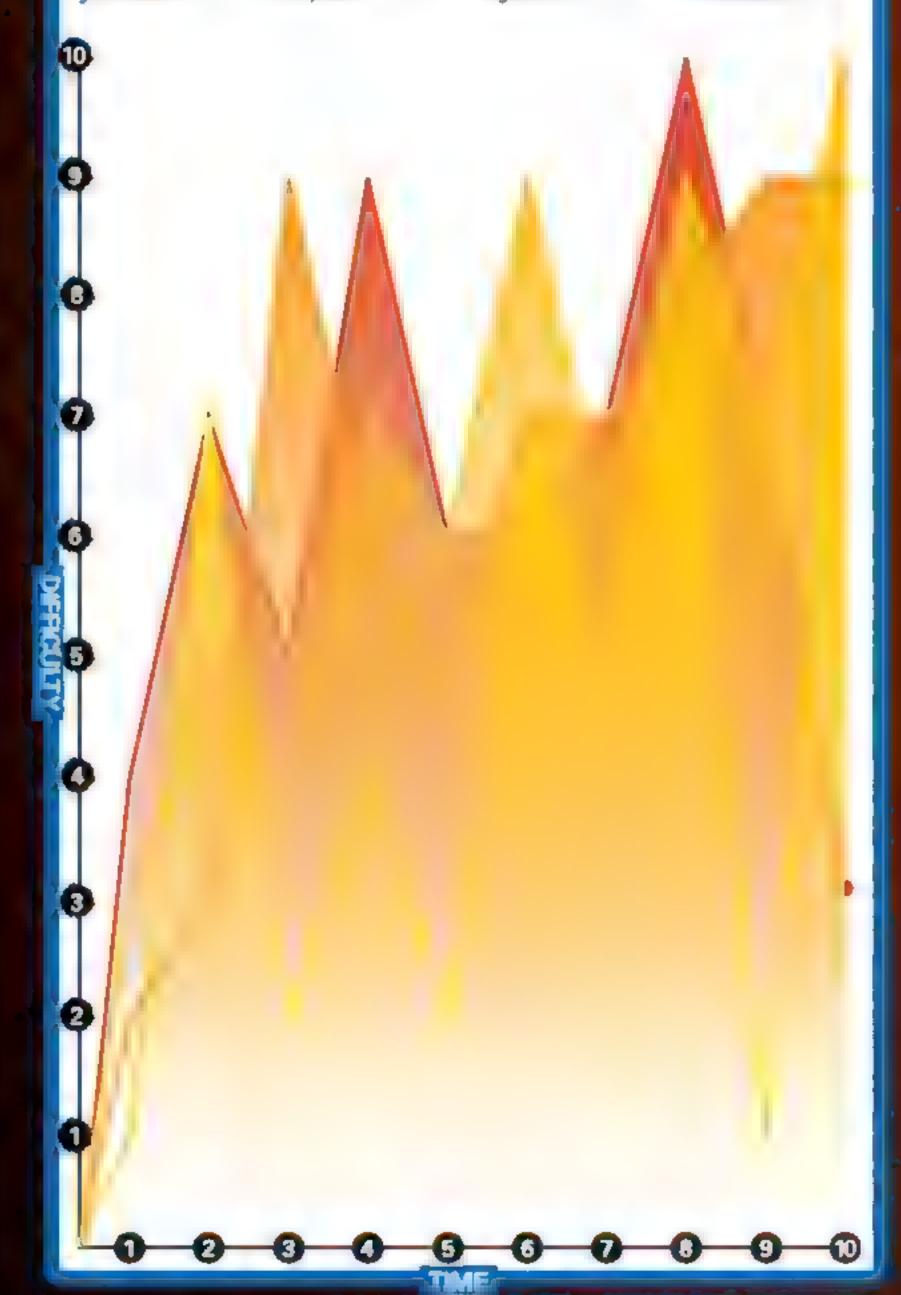

FORMAT: NES YEAR: 1991 DIFFICULTY: 10

ifficulty curves are one of the toughest things to get right in games, but few games have got the gradual increase in challenge quite so wrong as Battletoads. If we were to ask everyone who had ever played the game how far they got, we imagine the majority would think about it for a moment, tell us it was the third level then punch whatever was closest to them. Repeatedly.

Turbo Tunnel will go down in history as one of the most unfair stages in any game ever, a speedy side-scrolling race level where even a single collision proves fatal, and after the curve soars into the stratosphere with this horrible level, it doesn't even bother coming back down – the rest of the game's 13 levels are horrible as well, albeit at least in different ways. So vicious was this infamous level that later ports of the game actually saw it tweaked or even removed entirely – collisions are non-fatal in the Game Gear version, for instance, while the Amiga version overlooks the level entirely, replacing it with a far simpler alternative.

It wasn't even just Turbo Tunnel that proved problematic, though. Enemies could lock you into hit-stun combos before belting you into instant death drops, while platforming – never exactly the game's strong point – gets stupid as you edge closer to a credits sequence that you'll never actually see.

SUPER MEAT BOY

FORMAT: PC, XBOX 360 YEAR: 2010 DIFFICULTY: 9

here's been something of a renaissance for sadistic platformers in recent years, with many indic developers taking cues from the great games from yesteryear to create levels so devious that you'll swear they're actually impossible. But while so many troublesome vintage games tend to be hard through poor design * be it fallout from the quarter-hungry arcade developer generation, technical limitations of certain platforms or whatever * this new breed is tight, fair and dangerously sadistic.

Like fellow Flash game N, Meat Boy started life in browsers before the guys behind it saw fit to take things up a notch. A more stylich twist on the maddening but oh-so-addictive high-speed hijinks of N+, Super Meat Boy is one of the great platformers of the modern age. As with so many games of its ilk, a quick glance at a level and a couple of early failures will often be enough to send you running off with your tail between your legs, while expert players manage to make the same stage look like the easiest thing of all time. It's pure skill all the way, from jump height to navigation to seeking out dangerous and quicker ways to reach the goal.

That's not even your only target here, either. Many levels feature collectible bandages or hidden warp zones (which lead to brilliant retro-themed bonus stages) but reaching these is often made incredibly difficult - bandages in particular are a nightmare as you still need to reach the goal after grabbing them for them to be added to your collection. On top of all that, dominating a level will unlock a much harder Dark World variant, usually littered with more spikes and saw blades than safe areas.

MEGAMAN FORMAT: NES YEAR: 1987 DIFFICULTY: 8

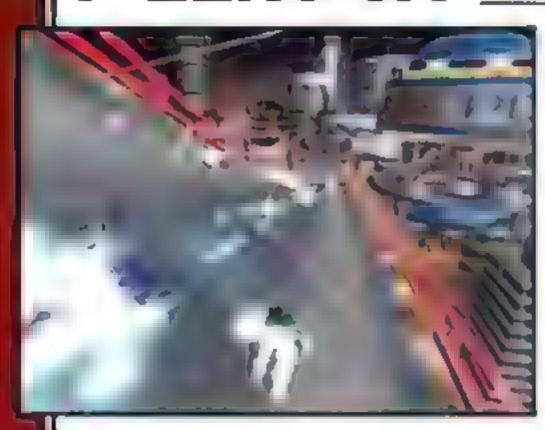

apcom's Mega Man is another title that had NES owners howling with frustration. While it boasted smart level design, it also featured insanely tough bosses, evilly placed hazards and spectacularly tough jumps. It was hard enough simply getting through a stage in one piece, but once you reached its end you faced an even tougher challenge. While the bosses of Mega Man are varied and full of character they are also extremely

punishing, having brutal attack patterns that need to be learned. Even then you'll have a hard time of it, with Mega Man's inability to duck turning him into an easy target. Defeating an enemy earns his weapon and here the game gets a little easier (only just, mind) as attacking bosses in certain combinations (you can choose which level you start on) gives you a slight advantage. It remains challenging and things didn't get any easier for its numerous sequels.

F-ZERO GX

FORMAT: GAMECUBE YEAR: 2003 DIFFICULTY: 10

racing game? Really? Oh yes. And if you've ever played (or even seen) GX's Story mode, you'll know exactly why. This series of mission-based races is tricky from the start but by the time you reach the tail end of the campaign, you're looking at a restart every time you even think about making the slightest of mistakes. Spinning out on the 20th lap in a GT Endurance race is one thing, but this constant string of do-overs just feels impossible at times.

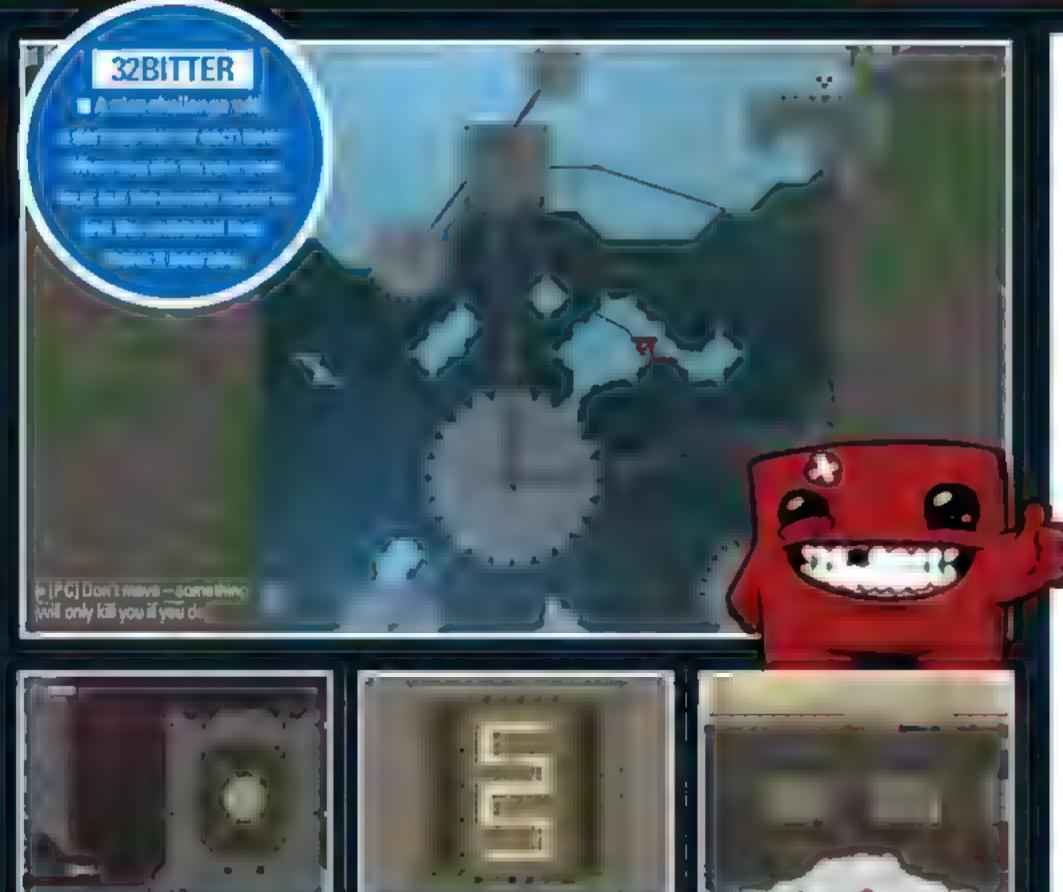

PRINCE OF PERSIA

FORMAT: VARIOUS YEAR: 1989 DIFFICULTY: 7

e were surprised by the number of people who brought up Jordan Mechner's classic platformer when we started discussing tough games. Thinking back, though, there were indeed quite a few devious traps and puzzles - from falling ceiling

tiles to well-disguised switches - that made it quite the trial-and-error affair at times. The harsh time limit is also a factor, limiting play-time rather than lives and as such potentially setting up situations in which the game became impossible to finish.

INTERVIEW

Talking tough with Team Meat super-duo Edmund McMillen and Tommy Refenes

Were you concerned about the game being difficult through bad design?

"I think the reason why Mano and Ghosts 'N' Goblins and all those games were so difficult back then and that their design was more frustrating than difficult was that all those people had previously developed for back then was arcade. With Meat Boy, we took the penalty down to zero but kept the difficulty really high. In fact, we could push the difficulty much higher because of that reduced penalty and frustration "

Where did the idea for showing multiple deaths in replays come from?

"There was a video of a hacked SNES emulator where this guy was playing Super Mario World and it would take all of his recordings and layer them over one another and I was like, 'oh, I could do that in real time!', so we did. It was just a neat thing, and a good reward too "

RICK DANGEROUS FORMAT: VARIOUS YEAR: 1989

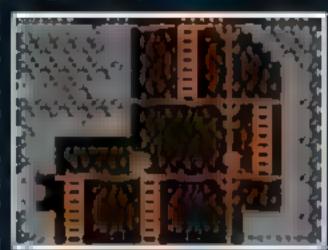

heap deaths are something that don't come up all that much elsewhere on this rundown. They're naturally a negative, seen by same as lazy design rather than the kind of pure challenge a gamer really wants to take on. Core Design's Rick Dangerous games were met with mixed reviews due to this emphasis on trial and error gameplay where boulders, spikes or later lasers could come out of nowhere to punish players who had done nothing wrong ber not having played a level before. But regardless, we still have fond memories of both games, the playful approach and design of the Rick Dangerous due making such deaths feel more like slapstick jokes than actual punishments for failure - the gaming equivalent of an exploding cigar or a

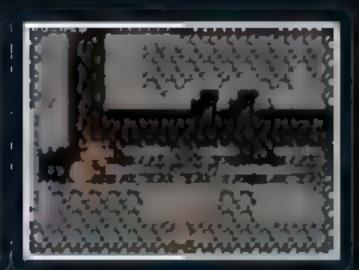

hand buzzer, and you quickly learn not to accept either.

The problem comes from the fact that such hazards are in no way telegraphed. At least in *Prince Of Persia* you'll see a floor panel shake before it dumps you down to a spiky grave, or a roof section wobble before it clatters you on the head. Here, there's no chance to react to many hazards naturally \(\delta\) if you don't know they're coming, you're dead. Generally speaking, skilled players should be able to sight-read a level, as is true of pretty much every classic *Mario* game and even newcomers like *Super Mest Boy*.

In addition to cheap deaths, though, the games are also examples of offering players extremely limited resources in the form of bullets and bombs. Spelunky riffs on this brilliantly, even if the procedurally generated levels don't always offer a way out if you've been overly reckless with supplies. It's a staple of modern survival-horror games too, ensuring a level of tension which, when coupled with the threat of unexpected death with every step, makes for an unforgettable mix. Unforgettable for the wrong reasons, perhaps. But the fact that we're still thinking, talking and grumbling about Rick Dangerous 25 years on means that Core must have done something right.

INTERVIEW

Simon Phipps talks temples and traps

Did you intentionally make Rick Dangerous difficult?

We didn't set out to make Rick any more difficult than any game of its time. Back then, the expectation of most games from Jet Set Willy to Monty Mole was having a limited number of lives and it was only the most talented of players.

who would ever 'beat the game'. We simply went into Rick with the intention of making a game that, for the first time, we thought, would capture that feeling of the opening sequence of Raiders Of The Lost Ark – you're going into the ancient temple with nothing more than a handful of buliets and your wits – you have to be constantly watching where you step because at any moment you could spring a trap that's been ready to trigger for a thousand years.

Many feel too much of it is down to trial and error. Would you agree with this?

If we'd known what we know now about game design, we probably wouldn't have made the game like we did and would have missed on making it the kind of game that folks at I write to me about 25 years later

You see in Rick, in our eagerness to try and create that Indiana Jones feeling of the unpredictable we broke pretty much every 'rule' about predictable game mechanics that's been written since. As we've learned over the subsequent years, the best approach for most games is to present the player with an object, teach them the rules about it and then reuse that object in the same consistent manner for the rest of the game. Rick doesn't do that

Hmmm perhaps I'm being a little harsh on myself here

I think what is more the case is that we created a set of
mechanics that were predictably unpredictable, if you will,
so for example, you'd always see where a blow dart might
be coming from, but precisely when it would be fired at
you, you wouldn't know

But yes, there are quite a number of 'traps' that you have to learn about by narrowly missing them in that binary *Dragon's Lair* manner where one path leads to death, the other the way forward. The only way through those is by getting lucky or by trial and error – I think we had far less of those in *Rick 2*

What I ve found interesting looking back over two decades later is that we made effectively an action-based memory game that looked like a regular platform game

How hard is it to get difficulty balanced on titles like Rick Dangerous?

Getting the difficulty balance is always incredibly difficult.

When you're making a game you're playing it every day.

You play it so often you learn to unconsciously compensate for the quirks in its controls, to work around them without being aware of it.

But that's not the limit – you have more than the insider information about what's coming up in the game; you can visualise where every trigger, every spawn, every collision boundary is, so it becomes impossible to experience your own game as anyone who doesn't work on the deviteam would

GHOSTS 'N' GOBLINS

FORMAT: VARIOUS YEAR: 1985 DIFFICULTY: 9

hat, you thought you might get all the way through a feature about hard games without seeing a knight in his pants? Please. Capcom may have had dollar signs in its eyes when it released the original game into arcades but it wasn't until the home ports came along that many of us had the time (or money, for that matter) to discover that this wasn't just another credit hoover – this is a game where skill is everything and insurmountable as the challenge seems, it's perfectly possible with the right combination of knowledge, gear and reflexes.

This game and its follow-ups also introduced us to another Capcom staple, namely repetition. As if finishing the game once wasn't enough of an ordeal, beating the last boss (and with the right sub-weapon, no less) would cast poor Arthur back to the start of the game for an even more arduous slog through the same demonic stomping grounds in the search for the 'true' ending should you manage to clear the more taxing second run. Ever since, pitting players against the same bosses on multiple occasions has

been a staple of Capcom games, with everything from Resident Evil to Okami staying true to the template.

This is one of the earliest examples of a harsh-but-fair game and even though the trials ahead might be enough to scare even the mightiest warriors out of their armour, you only have to watch a decent speed-run to see how skill-centric Ghosts 'N' Goblins actually is.

AIRWOLF

FORMAT: VARIOUS YEAR: 1984

t was a toss-up between this and Top Gun on NES for this alot (seriously, did anyone ever

manage to actually land on the carrier?) but with no less than three equally vicious Airwolf games, the aerial Knight Rider won out. The original home computer version tasked players with rescuing five hostages (read: the same hostage five times) with the many hazards speeding up and becoming even more dangerous with each successful evacuation. By the end, it demands split-second timing and perfect flight control, though the payoff is hardly worth it. The sequel was a more traditional side-scrolling shooter and again we saw a hideous level of difficulty, while the NES game was pretty much just a mess – a 3D shooter on a platform that clearly couldn't cope with being stressed in such a manner.

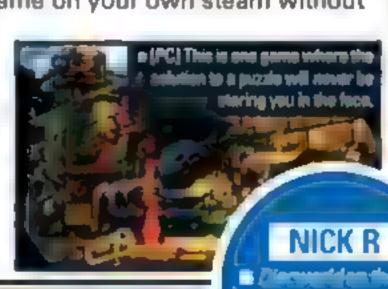

DISCWORLD

YEAR: 1995 DIFFICULTY: 8

but this might just be the moment the genre broke down.

Monkey Island wasn't without its fair share of eyebrow-raising solutions but here, logic was exiled forever to free up a seat for the clown prince of zany humour. While puzzles that could be easily deciphered had been the downfall of the genre, taking things to the other extreme as Discworld did wasn't exactly the best solution – if you managed to get through the game on your own steam without

the repeating dialogue driving you insane, we doff our wizard hats to you. It's like they made an entire game to the same level as Gabriel Knight 3's ridiculous disguise puzzle, and while it's in keeping with the source material, that doesn't make it any less painful.

LITERALLY IMPOSSIBLE

Meet the games that just can't be completed...

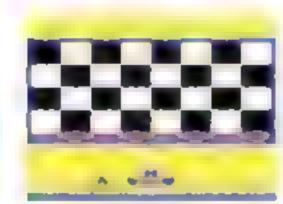

GRAN TURISMO 2

were apparently pulled from the game late in development, meaning that it's impossible to get 100 per cent completion in the first run of copies. After spending so many hours getting close, this revelation was somewhat disappointing.

SPACE STATION SILICON VALLEY

■ Another glitch-based frustration – one particular trophy cannot be collected, meaning that full completion (and the associated bonus level) are inaccessible without cheat codes. Does nobody test these things?

IMPOSSIBLE MISSION

In Due to random spawning, it's possible for crucial items to be piaced entirely out of reach or for punch cards to be used in unintentional combinations that make the game unwinnable. It's rare, but it can still happen.

JUST CAUSE 2

■ As with Gran Turismo 2, several missing pieces of content prevent players from hitting that satisfying 100 per cent completion rating. There's an unofficial patch available for the PC version that fixes this, but that's about it.

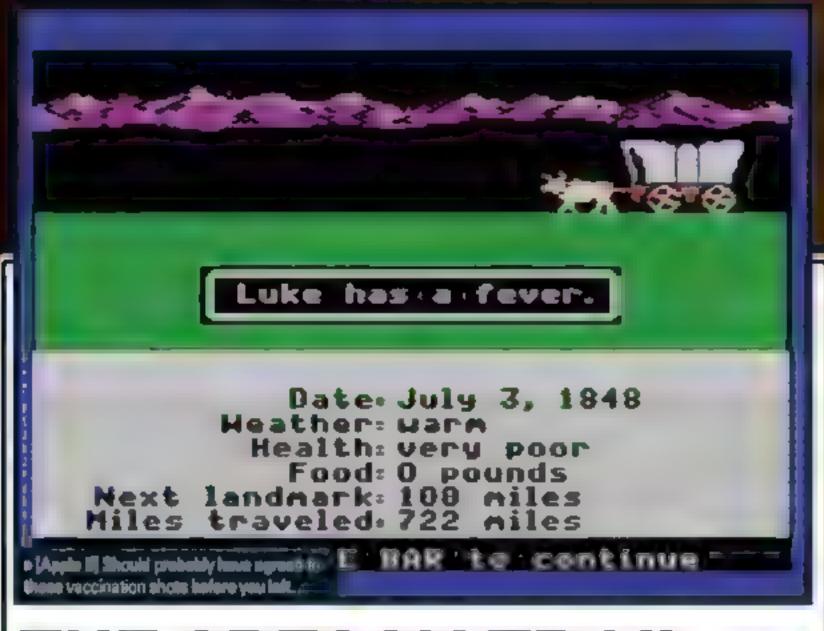

JET SET WILLY

In its original release, a number of bugs existed in Matthew Smith's Manic Miner sequel that could actually prevent the game from ever being finished, corrupting several areas of the game and at times interfering with enemy placement.

PAC-MAN

Probably the most famous of the lot, Pac-Maris luliscreen prevents play (well, accurate play – you can still guess your way through the glitches) after reaching level 256. Not that it would have stopped otherwise, but still.

THE OREGON TRAIL

FORMAT: VARIOUS YEAR: 1971 DIFFICULTY: 9

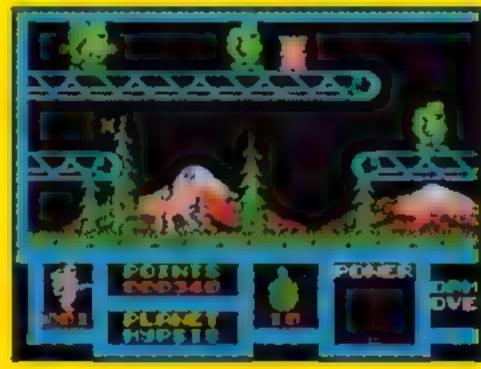

hat is an educational game doing on a list of the toughest games ever made, you ask? Well, this one is different – the point of the game was never to 'win', rather to learn about the impossible odds American pioneers were up against. No matter how hard you try or how well you think you're doing, one nasty bout of dysentry and it's all over. Educational title or no, this still remains a landmark title in changing the gaming rulebook and horrible as it is, we're glad it happened – without it, we wouldn't have been blessed with excellent parodies and pastiches such as The Organ Trail and Super Amazing Wagon Adventure.

GAME OVER

FORMAT: VARIOUS YEAR: 1987 DIFFICULTY: 10

ot all games on this list are equal. Some are harder through clever design, others through devious design but this one... well, it's just got to be put down to poor design, really. Dinamic's games were pretty much all equal though, at least in the sense that they were generally borderline impossible. Between chaotic movement of both character and enemies, a barrage of unpredictable enemy attacks and some horrible colour clash confusing matters further, Game Over truly lives up to its name – if

the objective was to simply kill the player off then Dinamic made the perfect tool for the job. The studio also gave us the equally horrible Freddy Hardest. Endure Freddy Hardest to the end and your reward is just a text screen, which reads 'Too good to be true you lousy playboy' – totally worth it...

. [2X Spectrum] And you thought Freddy Hardest was tough

HARDEST BOSSES

We can hardly bear to look at this horrible lot

QUEEN LARSA (MUSHIHIMESAMA FUTARI)

■ Builtet hell shooters aren't exactly known for being accommodating for their players, but this final boss just takes the piss, no two ways about it. For most of the fight, you can't even see the screen for the blanket of builtets you need to avoid, and she doesn't exactly go down quickly either.

HOW TO BEAT

■ Without a perfect awareness of your exact hitbox and knowledge of where and when to use your special attacks, this fight might as well be impossible. Play it on free-play and you'll eventually get by via brute force, but dodge like a pro and you might just ICC her. Who are we kidding? That's literally never going to happen.

DR ROBOTNIK (SONIC THE HEDGEHOG 2)

■ Sonic's portly nemesis has already been dispatched several times by the time you reach the Death Egg zone, but this final trial is the toughest of the lot. With no rings to save you — and a Metal Sonic battle immediately before it — a single hit will send you all the way back to the beginning of the area.

HOW TO BEAT

enough once you master the art of landing two barrages of four attacks when he appears and as soon as he crosses the screen. Robotnik, meanwhile, is a pain, not least due to collision bugs. Stick to patiently attacking the lowered head after he jumps and you should be okay

(MORTAL KOMBAT 2)

Midway's gory lighter isn't exactly known for its balancing and sure enough, this striped sub-boss (yep, he's not even the main guy) is a broken mess. He can throw you out of pretty much anything and kill you in a couple of hits – Lord knows how many controllers this guy has cost the gaming world.

HOW TO BEAT

Pick Sub-Zero and freeze then batter him.

Or pick Scorpion and spear then batter him.

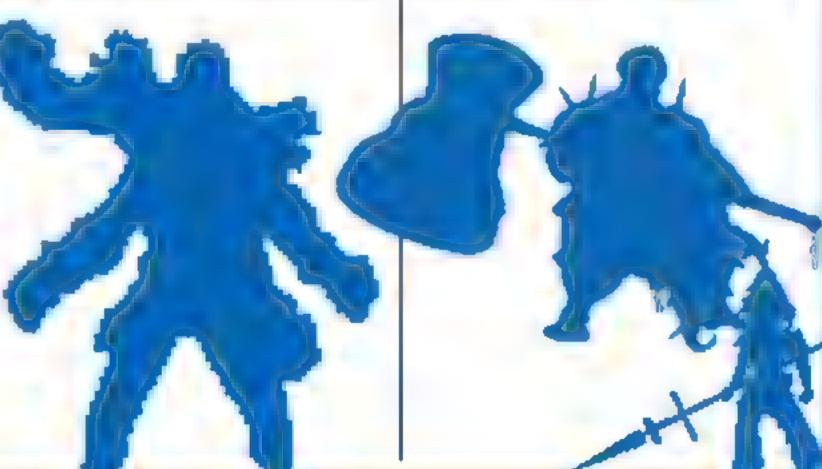

If neither ninja option is up your street, be prepared for an arduous fight where your best bet is getting lucky. Oh, and never beat him in the first round. Fighting game bosses hate when you do that, and tend to react accordingly.

ORNSTEIN & SMOUGH (DARK SOULS)

■ Having struggled through leaking dragons, lethal sewers and towering demons, From's game throws out the rulebook late in the game to set you against two bosses at once, it's one of the most challenging battles in all of gaming, but the sense of accomplishment when you finally achieve victory is unmatched.

HOW TO BEAT

■ Single one of them out (the order in which you beat them dictates the rewards) and don't lose focus. Keep your guard up and be ready to roll at a moment's notice. Or just equip some heavy armour with high Poise and tank your way through them one at a time. These guys have ruined lives — don't let them claim yours.

DARKSOULS FORMAT: PC, PLAYSTATION 3, XBOX 360 YEAR: 2011 DIFFICULTY (B.

In an era where accessibility and empowerment have become all-important, Dark Souls + like Demon's Souls before it - is a beacon of hope. Its success proves that not every gamer wants their hand held and that many people are still happy to fail over and over again so long as the sense of improvement and satisfaction are worth it. From Software absolutely nails this with the Souls games, generally managing to avoid the kinds of cheap deaths that were more common in spiritual predecessor King's Field while finding new ways to ramp up the difficulty at every turn.

The opening alone is a good enough reason to include Dark Souls on this list, with the first boss stomping in from pretty much out of nowhere before the brief tutorial has really had a chance to begin. Rude as it may seem, this teaches you an extremely important lesson about the game is take nothing for granted and be ready for anything. And it isn't even just about tough bosses, either, Many of the later regular enemies can put you down in a hit or two if you let your guard down, plus even the game's structure is punishing. The open-world approach means it's easy to head the 'wrong' way and get battered by enemies you're nowhere near prepared for, and knowing when to cut your losses and run is key. But with those hard-earned souls piling up where you last went down, greed will often get the better of common sense and the appropriate price will be paid.

Few games demand such dedication and constant attention as Dark Souls and while death will still be frustrating, learning from it is part of the Souls cyclo. And as if the regular enemies and bosses weren't harsh enough, the constant threat of invasion by other players while online makes for some of the most exciting hardcore gaming in years. If you're looking for your next challenge and still haven't ticked off all three Souls games, we heartily recommend you do so. Yes, you'll die a lot. And yes, you'll get quite angry at times. But try telling us that it wasn't worth it after that 'Victory' Achieved' message pops up and you're left punching the air and high-fiving yourself.

Greed will get the better of common sense and the appropriate price will be paid

The gaming evolution that led to Dark Souls II, 2014's toughest game

ADVENTURE

An open adventure
that offers little in the way
of guidance, this seminal
game would inspire an
entire generation of

KING'S FIELD

A gruelling slog through uply early polition gruelics, crude design and vicious enemies and traps.

DEMON'S SOULS

■ Effectively a level-based King's Field game with the perspective pulled back to third-person, this was huge.

DARK SOULS II

The logical progression for the series – more deaths for the series – more deaths, more deaths, more because and more seaths. Prepare to die indeed.

Few genres are as challenging as the shoot-'em-up. With this in mind, Darran Jones revists some of its toughest examples

ROBOTRON: 2084

FORMAT: ARCADE YEAR: 1982 DIFFICULTY: 8

Report is the second Eugene Jarvis shoot-'em-up to make our feature, and it's not hard to understand why. It distils the genre into its purest form and remains one of the finest – and toughest – twitch shooters of all time. Everything about *Robotron* is beautifully balanced, introducing a steady stream of suitably different enemies that require both skill and knowledge to defeat.

There are no power-ups, no special abilities – it"s just you, those two intimidating joysticks and a seemingly neverending supply of enemies to deal with. You'll get a brief couple of seconds at the start of each round to get your bearings, but you're then thrown into a chaotic warzone that will test your skills to their limits. Add in the brilliant risk/reward system in the form of stragglers who can be saved for cumulative points, and *Robotron* remains one of those rare games – a tough experience that always drags you back for one more go.

There are no power-ups, no special abilities – it's just you

SLAP FIGHT

FORMAT- VARIOUS VEAR- 1984 DIFFICULTY- 9

shooters. Slap Fight is mainly memorable because of its insane ultimate power-up that turns your tiny fighter into an insane armada of death. Most mortals never get to experience the sheer power it offers, as they'll never survive long enough to witness it.

Slap Fight is insanely hard for a multitude of reasons. The enemies are frequent and painfully accurate, while ships will constantly sneak up and snipe you whenever possible. It's the lack of reach that really makes Slap Fight tough though. Your base bullets only hit halfway up the screen meaning you're constantly dicing with death whenever you try to take down enemies. A truly tough challenge.

HELL FIRE

FORMAT: ARCADE, MEGA DRIVE, PC ENGINE CD-ROM YEAR: 1989 DIFFICULTY: 9

oaplan's shooter is aptly named, as it's an absolute bitch to play. The real beauty of Hell Fire lies in its clever game mechanics, which evolve around a cleverly designed firing system. Your ship can fire forwards, behind, diagonally and up and down, giving you a tremendous amount of reach. The trick here of course is that you can only fire in one of the directions at a time, which turns Toaplan's game into a deadly juggling act where you

desperately try to fend off waves of sneaky enemies that attack you from all sides. The Mega Drive version makes things slightly easier by equipping your ship with an additional power-up that spews fourth a deadly plasma bolt, but ultimately it remains an extremely punishing shooter that separates the men from the boys.

VIEWPOINT

FORMAT: VARIOUS YEAR: 1992 DIFFICULTY: 10

hen we were asking readers about tough shooters, Viewpoint came up again and again.

First released in arcades in 1992, it's notable for being isometric, featuring rendered visuals and for being bloody hard. Simply surviving the first level for many will be an achievement in itself.

One of the more interesting aspects of Sammy's shooter is that the environments are just as dangerous as the enemies and bosses. You'll often find yourself dodging fast-moving barriers or shooting gates in order to disable them as you battle across *Viewpoint's* varied stages, and it becomes a reflex test as you weave through bullets, hazards and enemies.

GAME OVER

Game Over

you play

than seeing the dreaded Game Over screen? Nick pointed out that it's there to remind you that you suck at videogames and

other argument for Game Over screens is that they also uige you on, ensuring that you do that little bit better the next time

I don't want to see Ken bleeding from every onfice in Street Fighter II or look on with discomfort at a bru-sed and battered Donkey and Diddy at the end of *Donkey Kong* Country Seeing classic characters in such obvious discomfort made me do everything I could to ensure the same in stakes didn't happen in the future. They still normally did though

Sometimes, however, there is no escaping that dreaded Game Over screen, particularly when playing harder games. After all if a game is difficult you're going to see that screen a hell of a lot more often than usual, so you at least want it to be memorable. Don't you? Some games, like Tecmo's Shadow Warriors, managed it beautifully, marrying a classic piece of imagery to a difficult slice of gaming. Others (NES Friday The 13th and Bionic Commando we're looking at you'ld don't bother, simply printing your demise out in as lazy a way as possible.

With this in mind we've put together a selection of our favour te Game Over screens. Some are from difficult games, so are from easier efforts, but each and every one is memorable to us. How many do you recognise?

garrie over

YOU AND YOUR FRIENDS

GAME QUER

66 A driving game will fall apart without a smooth and consistent frame rate 77

The open environments weren't just taxing on the hardware, either the software struggled to keep up in places, as Martin explains. "An open city presented challenges for the Altoo, especially as the solution had to be extremely efficient due to our frame rate requirements. A driving game will fall apart without a smooth and consistent frame rate " With the PlayStation being pushed to its limit, we couldn't help but wonder if the team had ever considered shifting the game to a more powerful system. However, according to Martin the PlayStation's large audience ensured that the team didn't stray: "Although by the time we had finally finished and launched I think the Dreamcast had just arrived, the PlayStation was dominant."

Keeping the game on PlayStation
paid off. The final game arrived in June
1999, and proved to be both a critical
and commercial success. Players
followed the tale of undercover cop John
Tanner, taking on illicit missions from

individuals. The game received praise not only for the openness of its four cities, but the exceptional vehicle physics and excellent mini-games. These included a survival mode in which you were beset by homicidally aggressive police cars and a chase mode in which you were tasked with the pursuit and destruction of a target vehicle. But the most striking inclusion was the Film Director mode which allowed players to edit replays to produce their own car chase mini-movies, a loving homage to the films that inspired the game

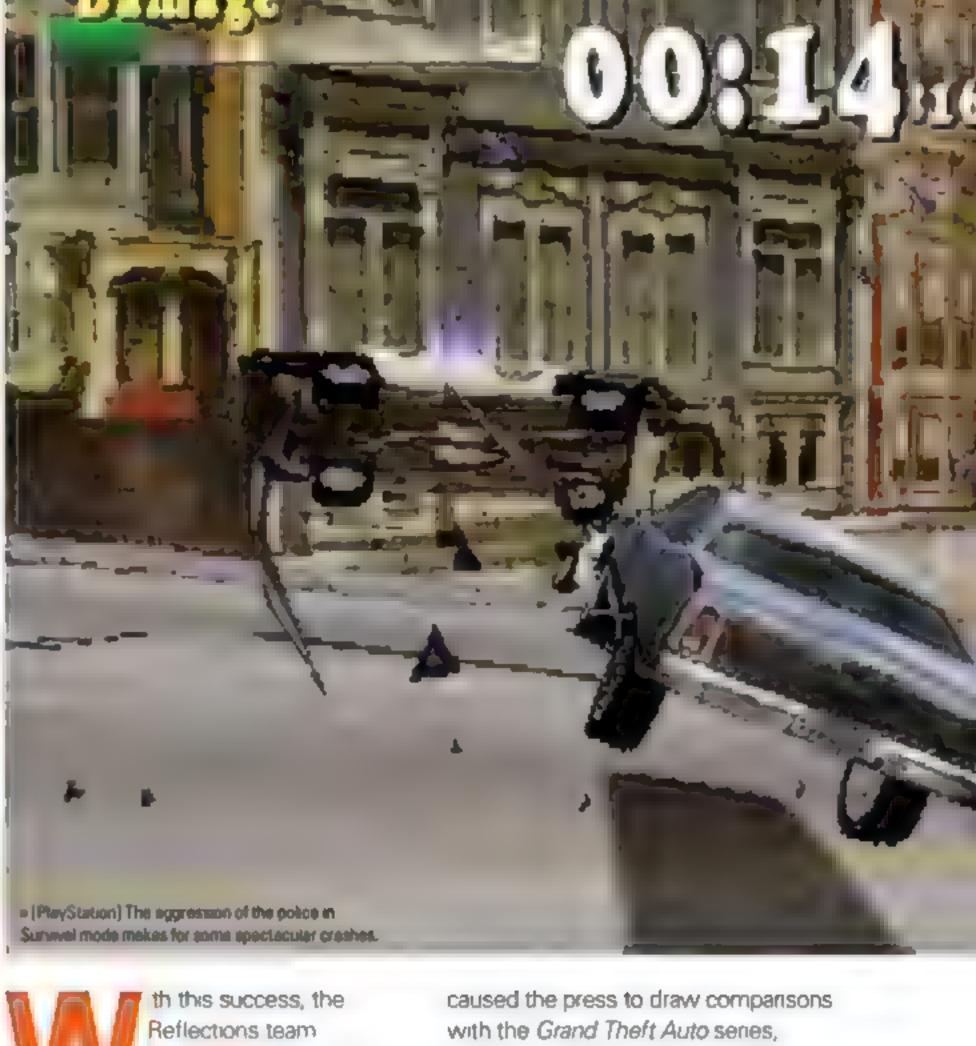

However, the millions of people that purchased the game did share one common gripe – the difficulty of the game's opening challenge, a skill test in the garage. Surely Martin must have wished it had been made easier? "Soon after the release of the game I did, since it was clear that it was too hard," he responds unsurprisingly, "however I think the design mistake was not so much that it was difficult, but that it was an absolute requirement to pass such a difficult test to enter the main game missions. You would never design a game like that these days!"

th this success, the Reflections team immediately moved on to the production of Driver 2. It would take Tanner to places he'd never been before, but the selection of the cities he would visit was a harder process than for the original, as Martin tells us: "It was a tricky job for Driver 2 since we had selected four perfect cities for the first game, many of which had movie connotations and were different in visual style. We went international just to try and continue that diversification I think if we had chosen four more US cities it would have been less appealing that the cities were becoming samey." Although the technological problems were taken care of during the development of the first game, Driver 2's cries required a bigger team to build, being larger than their precursors and featuring curved roads for the first time

Tanner's assignments in *Driver*2 didn't just take him to the likes of
Chicago and Havana, though – they also
took him outside his car. The ability to
enter and leave cars enabled Tanner to
switch vehicles mid-mission, and even
commandeer vehicles. The latter fact

caused the press to draw comparisons with the Grand Theft Auto series, something that Martin never quite saw: "The first 3D Grand Theft Auto didn't come out until a year after Driver 2 and that game was on PlayStation 2 so it certainly wasn't anything to do with competition, it just felt like a very natural progression really, since we desperately wanted the player to experience more cars than in Driver" Tanner's abilities outside a vehicle were rather limited though, and his animations were .. different. According to Martin, the team was once again running into the limitations of the PlayStation. "I remember the graphics of the animated Tanner character coming in for criticism but we just couldn't afford any more detail in the character than we had."

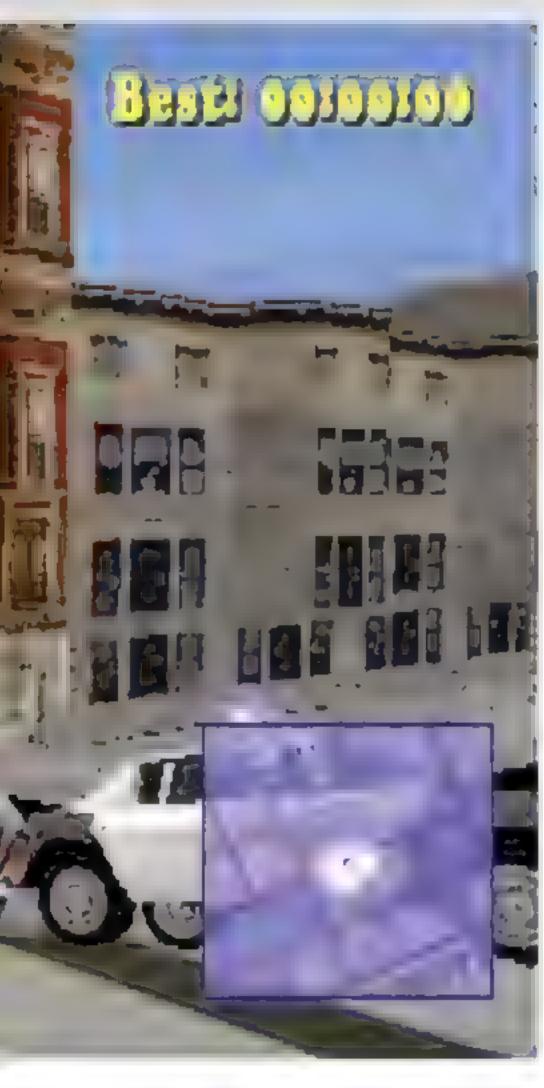

THE RETRO CONNECTION

An anonymous tipster called the Retro Gamer office about a potential goldmine. The team went out to investigate...

THE HISTORY OF DRIUER

and received a good critical response albeit one that was somewhat weaker than for its predecessor. The new locations and improvements to city design were welcomed, as well as tanner's ability to switch cars and the addition of multiplayer for the driving mini-games. Complaints largely focused on technical issues, with scenery pop-up and slowdown issues coming in for criticism, as well as an uneven difficulty level. Sales remained strong, ensuring the production of an ambitious sequel

the series into a new console generation, and expand upon the features in *Driver*2. Tanner's work as an undercover cop would take him to brand new international cities such as Nice and Istanbul, and he'd have greatly expanded abilities outside of his car, with fully-fledged missions taking place on foot alongside the driving missions. As a show of faith in the game, voice acting would be delivered by a big-budget cast including Michael Madsen, Mickey Rourke, Ving Rhames and Iggy.

» [PlayStation] Tenner's character model sported some odd animation in Driver 2 due to hardware limitations.

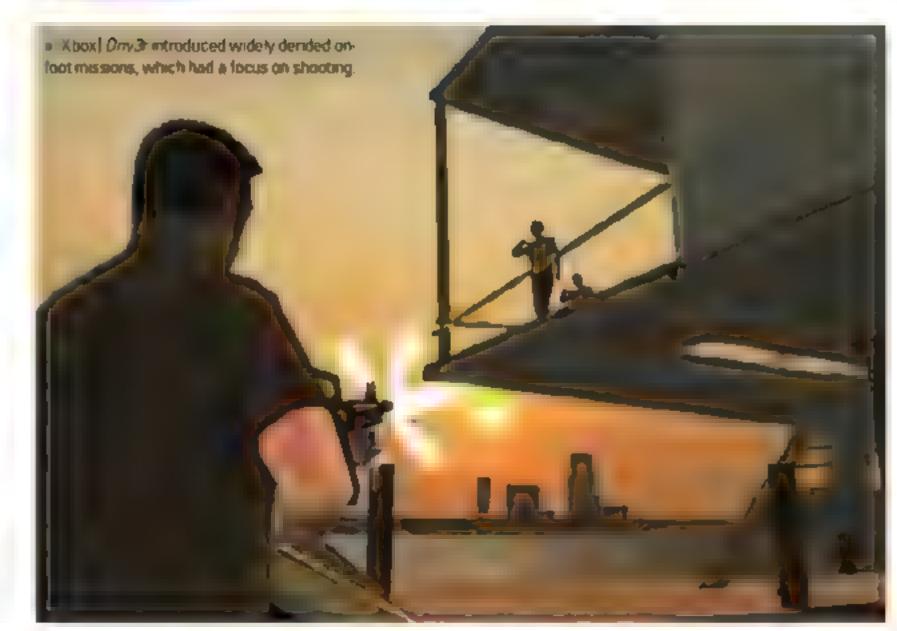

[PlayStation] Curved roads were a new feature in Orwer Z.
 allowing players to give the handbrake a rest

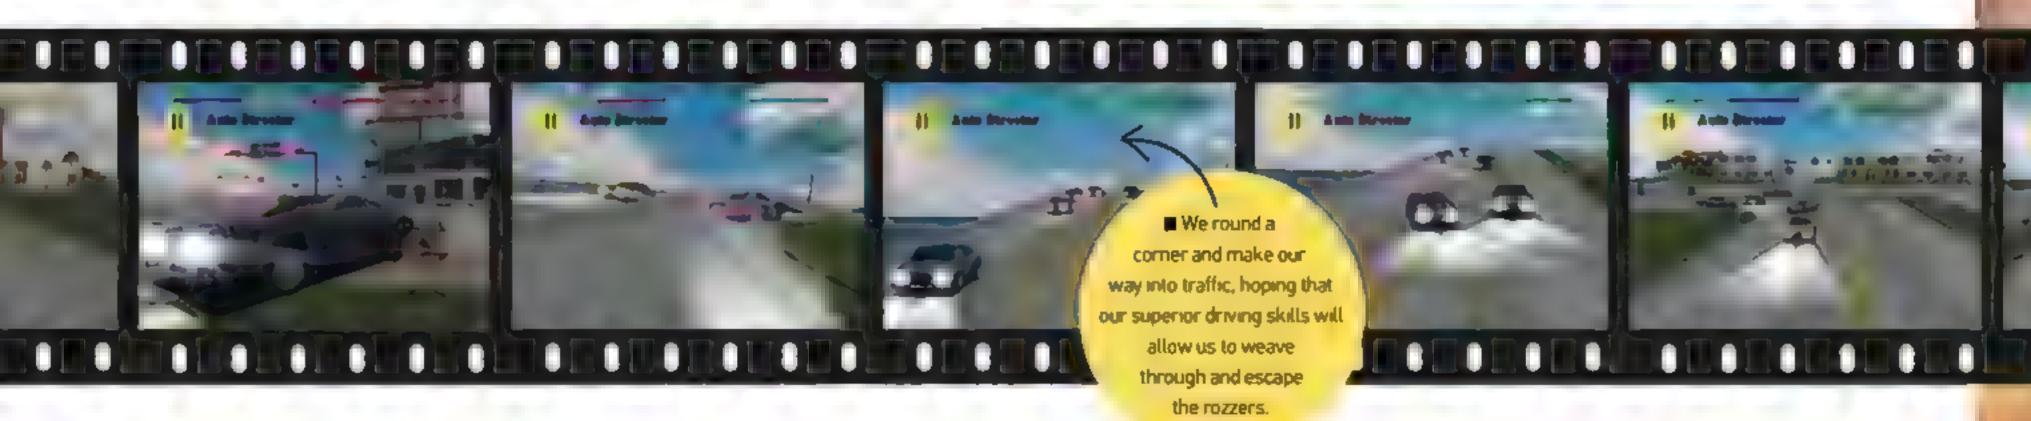

Pop. On paper, *Driv3r* was a dream product in many ways

Unfortunately for Martin and the Refrections team, development of Dnv3r would prove to be a long, hard road "When we were shown the early specs of the PS2 we designed the engine's capabilities and city detail around this," recalls Martin, "But the PS2 turned out to be much harder than we hoped to extract that promised performance from. A nightmare, in fact." Wrestling with the hardware would prove to be a major time-sink, as the team spent large amounts of time trying to bring the frame rate up to the desired levels. In normal circumstances Reflections might have pushed the game back, but it didn't have that option, as Martin explains "Atan were facing some pretty tough financial circumstances right about then and the game absolutely, positively had to be launched by their set date."

Compromises had to be made, and the on-foot sections bore the brunt of the cutbacks. "We had focused on the driving obviously and then finally moved to the on-foot sections very late in development," remembers Martin "The real problems came here as

It was an innovative idea at the time, and really interesting from the point of view of the cars, the music, the style and the city itself ??

Having finally been released in such a state, it's no surprise that critical reception to Driv3r was markedly less positive than for previous games in the series when it arrived in June 2004 It's a reaction that Martin accepts "For the most part yes, I have to agree with the criticism, as the lack of polish and unfinished on foot sections were clear to see " But while Driv3r wasn't a good game, in fairness it wasn't wholly irredeemable - and in this respect, Martin feels that the game received some unfair treatment at the time. "I remember one or two reviews being completely over the top in their venom, with criticism running all the way through every aspect of the game including car handling, music, cutscenes, all of which were strong and acknowledged by many other reviews "

we didn't have much experience

of this kind of thing but worse still just

completely ran out of time. At the end

of the day that date arrived and we

had no choice but to down tools and

release, and it is clear to anyone that

the on-foot sections were not finished."

It's fair to say that the game attracted a great deal of venom and it went on

e (PtayStation 2) TK was a new protagonst for Parallel Lines, who was motivated by revenge against former criminal essociates.

Rounding another corner, the police have got wind of our route and set up a roadbrock! But we're a bit

 [PlayStation 2] While on-foot missions were less prominent in Parallel Lines, some were still included.

 [PSP] The cops take a dim view of their cars being stolen, so it's an easy way to gain heat.

to receive many scathing reviews from the press. It ended up with an overall score of 57% on aggregate website Metacritic, an incredibly poor showing for an important triple-A game, "Even if Grand Theft Auto III, Grand Theft Auto: Vice City, The Getaway and True Crime didn't exist, Driv3r would be a disappointment," wrote IGN games™ was equally harsh, giving Reflections' game four out of ten and going on to say "[It's] a game of two halves, neither of which is finished It is so cursed by glitches and bugs, and so devoid of anything approaching Al, that it's really impossible to believe the code sitting in your local store is anywhere near complete." Things fared little better for the PC release, which arrived a good eight months after the PlayStation 2 and Xbox outings. It managed to amass a woeful score of 40% off 15 reviews on Metacritic, with many reviews focusing on its many bugs and annoying controls

and shift a fair number of copies, but the game appeared to fall far short of Atari's sales targets and after providing some input during the pre-production phase of the next game, Martin left Reflections in December 2004. Martin's brother Gareth Edmondson became the studio

They made it through the traffic but lost it at a corner, and it looks tike we're home free with the swag!

But then.

on the *Driver* series since its very beginning. "The team adapted well, and worked around the gap that was left behind, but of course, the important brand values and piliars were well established already," said Gareth of the changes that had occurred once Martin left, "It also gave a chance for some of the team members to grow as they stepped up to fulfil more senior roles in Martin's absence "

Driver Parallel Lines marked a departure for the series. The game left behind Tanner to focus on a new protagonist, TK. The game also took piace across two time periods, with the first half taking place in 1978 and the second half in 2006. "We wanted a powerful revenge story," states Gareth. "so we set it across a large period of time with the main character having to do time in the intervening time, all the time his anger growing." But it wasn't just a chance to build the story. "It was an innovative idea at the time, and really interesting from the point of view of the cars, the music, the style and the city itself," Gareth explains. For the first time, the series focused on just one city, with the game set in New York exclusively While this was partially down to constraints on time and budget, Gareth points out that the city area was also much larger and more detailed than in any previous Driver. "And of course we had to build it twice!"

The critical reception received by Driver Parallel Lines in March 2006 was much improved over that received by Driv3r, with critics praising the more limited use of on-foot missions and lack of bugs, but offering criticism that it was too close to the Grand Theft Auto series, without having the variety of distractions that that series offers. It would be the last Driver release on home consoles for five years, as the incoming generation of consoles required a major technical overhaul.

The world of Parallel Lines was soon expanded in Driver 76, a 2007 PSP release that was handled by Sumo Digital Previous handheld editions of Driver had been cut-down versions of the main console games, but Driver 76 was a side story ail of its own "We knew Sony were not very keen on direct ports of their games onto PSP at that stage and so we knew we needed lots of new content," explains Pat Phelan of Sumo. The portable hardware proved to be a challenge to work with, with RAM limitations and battery

and prophical issues.

AREFLECTION ON REFLECTIONS

Now known as Ubisoft Reflections, Reflections Interactive has been making games for 30 years. We reflect on some of our favourites...

RAVENSKULL (1984)

This is where it all began for Reflections Interactive (or Reflections as it was then known). Published by Superior Software, Ravenskull saw Martin working alongside his school friend Nicholas Chamberlain to create an impressive graphic adventure that saw you exploring the grounds of Castle Ravenskull. It's an impressive debut that holds up well.

SHADOW OF THE BEAST (1989)

This was the game that convinced many 8-bit owners to make the jump to Commodore's 16-bit. Armiga. While it's not the easiest of games, its insanely beautiful visuals, impressive parallal scrolling and haunting music hooked many in. It received numerous conversions and was popular enough to secure two sequels.

DESTRUCTION DERBY (1995)

This was Reflections' first driving game and while it looks a little rough around the edges nowadays it still plays amazingly well. It's the well crafted physics that makes Destruction Derby so exhiberating to play, with you feeling every bump and jostle as you tear around the crowded track. A sequel arrived the following year and proved to be just as much fun.

STUNTMAN (2002)

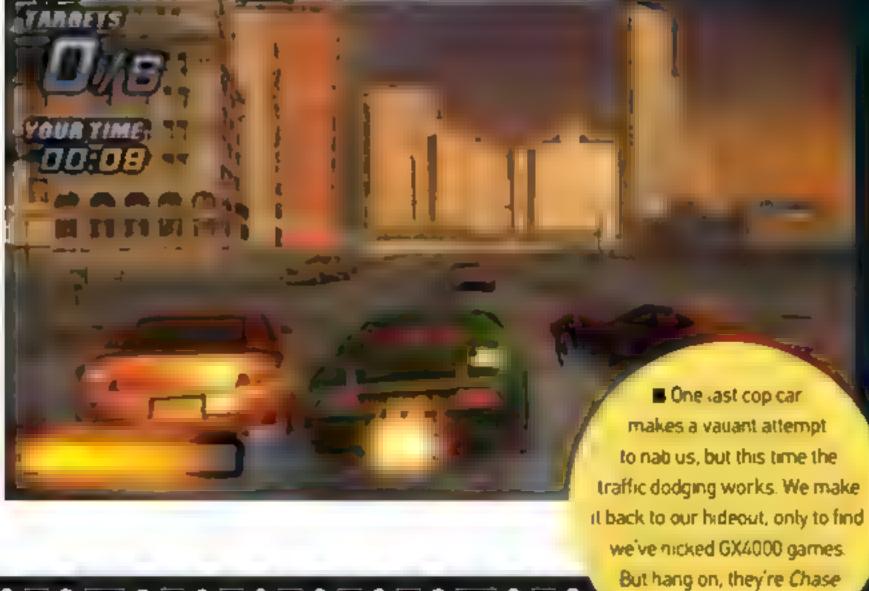

Doriginally released in 2002, Stuntman thrust players into a variety of different vehicles and tasked them with performing stunts on fictional movie sets. These varied wildly, from barnstorming Dukes Of Hazzard-style jaunts through the Louisiana countryside to slick James Bond-inspired maneuvers around the streets of Monaco.

TOM CLANCY'S THE DIVISION (2014)

Involved recently in the development of the highly ambitious upcoming *Tom Clancy* game, revealed at E3 last year. Set after a viral outbreak in New York City, *The Division* is a hybrid of third-person shooter, MMO and action-RPG and is expected later this year.

The international cities that host Driver's crazy chases

NEW YORK, USA

GAMES: Driver, Driver: Parallel Lines. Driver 76, Driver: Renegade 3D

■ The Big Apple hosted a fantastic car chase in: The French Connection and is Driver's mostrevisited city, appearing in four games.

MIAMI, USA

GAMES: Driver, Driv3r -

Florida's sunny shores provide: the perfect scenery to begin a Drivergame, kicking off the action in both Driver and Driv3

CHICAGO, USA

GAMES; Driver 2 -

■ The windy city provides your: introduction to Driver 2 with ts characteristic elevated train lines providing the game with a memorable early mission.

LOS ANGELES, USA

GAMES: Driver:

Driver: San Francisco

■ Found in the latter half of Driver: Los Angeles is best known in car chase terms for To Live And Die nLA.

SAN FRANCISCO, USA

GAMES: Driver Driver: San Fittingson

■ Having provided the setting for Bullitt, San Francisco was any obvious inclusion, with its hills allowing for some amazing jumps

Cuba's 'city of columns' is an welcome visual departure for the mories, with greenery providing a contrast to brown and grey American cities.

33375

LAS VEGAS, USA

GAMES: Driver 2

■ According to Martin Edmondson, Las Vegas made the cut in Driver 2 due to it's architecture and historical mab-style vibe.

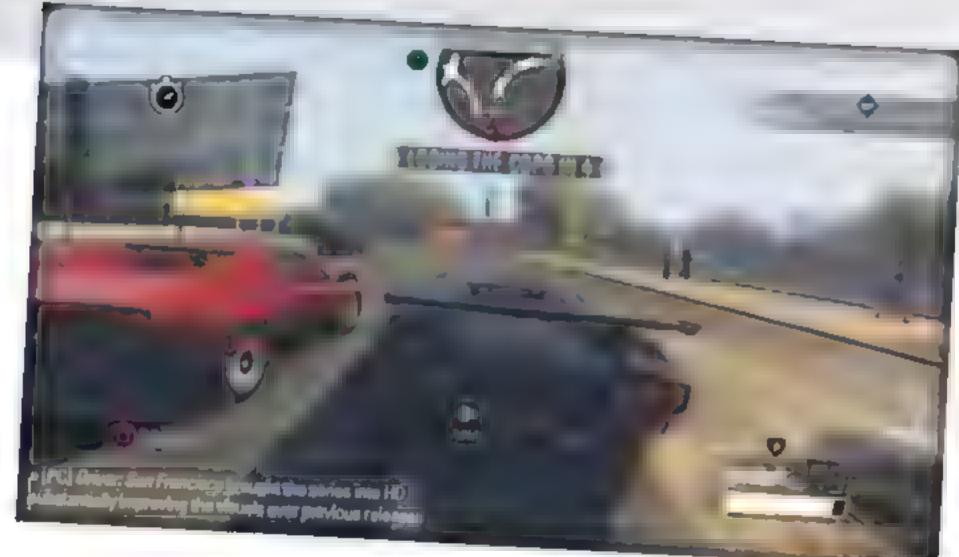

RIO DE JANEIRO, BRAZIL

GAMES: Driver 2 -

■ The capital of Brazil is the setting for the final; stages of Driver Z and brings with it some highly congested streets

Iffe both causing the team problems. Critical reaction was mixed, with critics praising the driving engine, but criticising the game's short length and technical issues. When asked if Pat could have changed anything about the game, his response is teiling: "I'd have asked for more time from the development gods and given the team an easier ride."

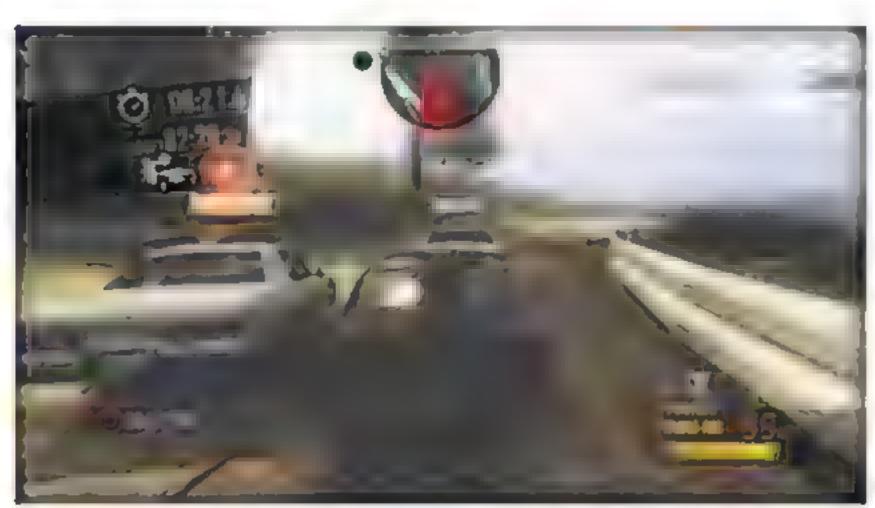

Less successful was the next handheld game, *Driver: Renegade 3D*, an early release for Nintendo's 3DS. It was a disappointing release, with critics cailing out some extremely noticeable pop-up and the repetitive missions, mostly following the "pursue and destroy" formula of *Chase HQ* However, *Driver: Renegade 3D* was a sideshow, arriving on the same day as the next full console game – *Driver San Francisco*

or the HD debut of the senes, Martin returned to Reflections "It was hard work and very different to working on the early games but I really enjoyed it, especially as I have such affection for the game," he tells us. The game returned to a focus on pure driving, ditching the onfoot action that had proven unpopular in previous releases. However, the returning Tanner retained the ability to switch vehicles with the 'shift' mechanic - so long as the player has sufficient points, they can swap consciousness to the body of any other driver, an ability stemming from Tanner's comatose state in the plot. "We had an offsite concepting meeting in France and the idea sprang from a single statement -

'you can be anyone'," says Martin in explaining the origin of the feature. "It was difficult to persuade many people of the potential of this system but it proved itself in the end. Especially in multiplayer, it was an absolute blast. The concern was that it would be seen as silly."

After spending so long battling constraints, Driver San Francisco was a welcome relief for the team "Ubisoft was extremely supportive and constantly pushing for the highest quality. possible," says Martin. "They were happy to sign off on the huge additional time and expense brought by targeting 60 frames per second for example - that decision alone probably added a year to the development." The publisher's support ultimately paid dividends - when Driver: San Francisco hit the shelves in September 2011, it received a positive critical reception, eclipsing all other Driver sequels to become the best-received game since the PlayStation original

While Driver is a series that has experienced mixed fortunes over the years, we can see exactly why loyal fans keep corning back. "Driver was a game I wanted to play myself, born out of an absolute obsession with movie car chases," says Martin, explaining the long-term appeal of the series "Because of that I think it captured what it felt like to be in the thick of a car chase, power-sliding round bends, blasting down alleyways and bursting through the pile of boxes at the end." We're inclined to agree. As we said, car chases are ace - and when Driver is at its best, you won't find a better way to experience them. *

PC| While Tanner can switch cars in Driver: San Francisco, it's achieved with a 'shift' ability rather than leaving your vehicle.

MORE CLASSIC SHINOBI III MOMENTS

Horsing Around

Shinobi It's most immediately exciting new feature is the inclusion of vehicle stages of which the first is a stage on horseback, in which Joe and his steed need to jump spiked fences and deal with constant ninjal attacks. It's a great way to break up the platforming action and features some excellent music, which was recently remixed for Sonic & All-Stars Racing Transformed.

Lock-On Technology

Some bosses just don't play fair, and the mutated creature at the end of Shinobi III is third stage is one of them. It first turns up in the background as you try to dodge enormous larval antiions and avoid sinking into the simy organic matter that litter the area. If you're not too quick it lock its sights on Joe and attack before you ever get a chance to touch it.

Aquatic Action

It is another vehicular moment—
this time, an excellent boss battle.
Your mechanical foe begins by attempting to hit you with forwardfiring shots and simple ramming attacks, but once you've damaged it a bit it will rise from the water and greatry vary its attack patterns bombarding Joe with missiles, scattered bombs, laser fire and even a charged beam attack.

Imposs ble Ascent

Having taken down the glant robot clife from our main moment the player is now a superhuman in Sega's eyes and is ready for anything. The next stage therefore tasks Joe with defying gravity, leaping up a series of plummeting boulders to victory – all the while enduring the customary assault from a variety of both standing and winged ninjas.

THE WAR LORDS MC LOTHLORIEN

If you had picked up a wargame from your local software shop in the Eighties, the chances are it would have been released by the generals of MC Lothlorien. Graeme Mason chats to Mike Cohen, co-founder of the Manchester-based company

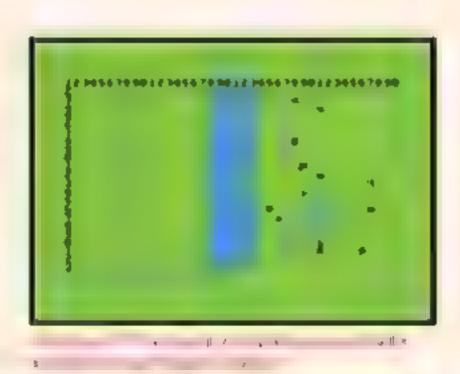

ne of the extraordinary facets of the games software explosion of the early Eighties was the relative inexperience of many involved. Very few computer courses existed often programmers came direct from university or were even still in education. The men who formed the software houses themselves usually had business experience but very little knowledge of the product they were actually selling. They had to learn on the job, and learn pretty quickly if they were going to take advantage of a rapidly expanding market

In the late Seventies, Mike Cohen and Roger Lees were working for the Road Transport Industrial Training Board "It was a great organisation and a very big thing in the Sixties," remembers Mike, "and Roger and I essentially provided business consultancy to the relevant small companies." Eventually the two men had a growing feeling that having spent much of their time telling others how to run a business, perhaps they should have a crack themselves. "We

basically thought we really ought to be putting our money where our mouth was," says Mike

Retro Gamer is sitting opposite Mike Cohen inside Manchester's voluminous Event City where the second Play Exposis currently in progress. Surrounded entirely aptly by numerous home computers from the last 35 years. Mike can't stop grinning. "Makes me feel so old all of this," smiles the

David Bolton

The master coder behind Johnny Reb 2 moved into business software, developing oil trading software for Morgan Stanley among other projects, Today he works as an independent contractor:

Roger Womack

Roger is still coding today and having found himself at home with football management simulations. He currently runs his own company Sports Director, whose main seller is Football Director available on iOS, Android and PC+all. versions programmed by Rogar himself.

Steve Riding

Stave has enjoyed a glittering curear in videogernes that began with othiorien. He joined Paygnosis as a producer, eventually ending up as director of all externel development. After that he started Traveller's Tales before building up another company, Lockwood. He has recently set up a new company, working on a well-known (P.

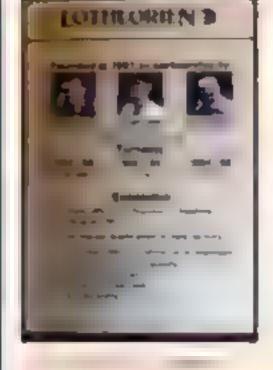

Roger and Mike met at Grammar school in Manchester at the age of 11 The two boys quickly discovered a shared passion for wargames and would very soon be standing on opposite sides of various miniature battlefields. "I had a 20-33mm sized model army based on Alexander the Great's Macedonian army," remembers Mike, "so I usually took the Greek side and Roger the Persian, playing to actual wargaming rules." We ask Mike where the considerable fondness for Ancient Greece comes from "I haven't a clue!" he laughs. "I guess at school although my first degree was in science. But I remember being quite into it from an early age and often when I was supposed to be listening to a physics lesson I was reading up on the Peroponnese war instead

any of the companies Mike and Roger were assessing had already started to think about the potential of computerised accounting. "We didn't know a thing about computers but we thought from a credibility point of view in terms of our role that it would be a good idea to at least have a rudimentary knowledge," says Mike. Rather than attempting to create a complex piece of business software, the coding initiate sensibly opted to try and create some type of game instead. But where to start? "I thought about what I liked and my hobbies and I used to play a lot of tabletop wargaming," explains Mike "And very often one of the problems was that you couldn't get an opponent to play against. So I reasoned, I should teach myself to learn how to program

in BASiC and then try and create a

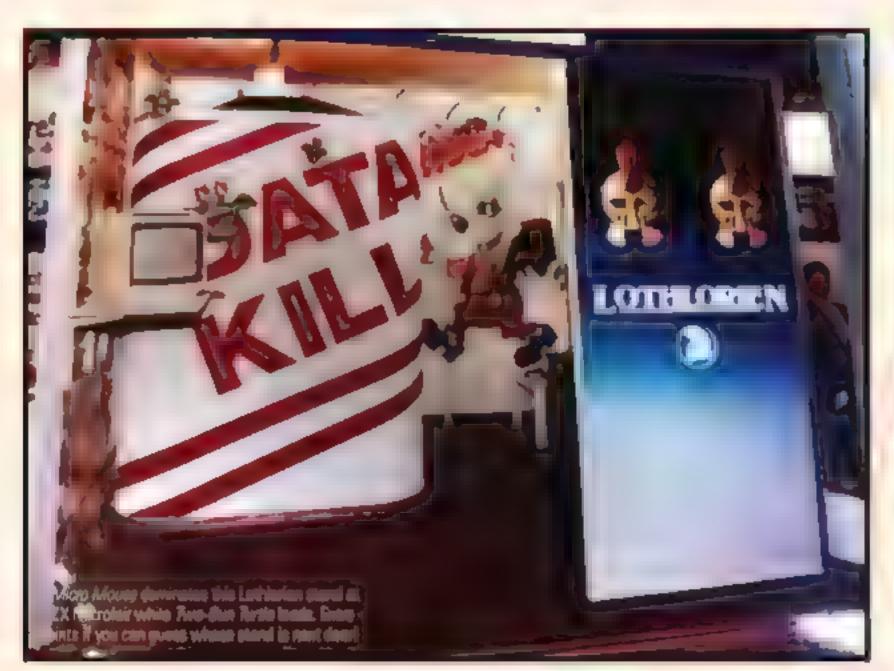

wargame of some description "

Retro Gamer is now sitting opposite Mike in a fifth floor room of his club in central Manchester, the chink of our coffee cups echoing around the wood-panelled walls. The steady manic buzz of the Play Expo seems a world away from the quiet peacefulness of the stately home-esque room, "What I started to work out was actually just a simple strategy game," continues Mike, "you could hardly really call it a wargame. It was only really a means of teaching myself BASIC." Drawing on his love of ancient Greek mythology, Mike created the game Tyrant Of Athens for the ZX81 "It took me a couple of months, working evenings in my dining room. At the end of it, I

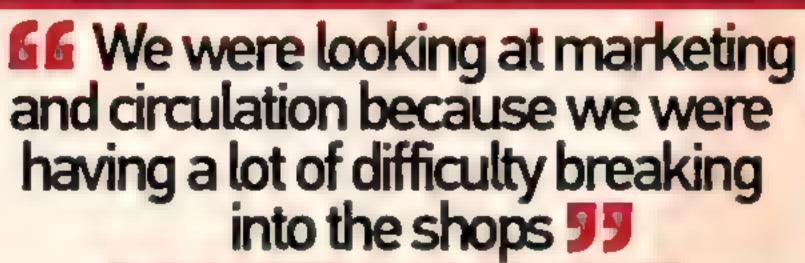

MARE IN THE BEUNDAY IN THE DEAL IN THIARCUSE PERC

on the way I'd learned a little bit about computers and created something that was a bit of fun." When Mike showed his creation to some friends, they asked if he'd thought about trying to sell it. "It was about the time when people were selling games through mail order, mainly by advertising in magazines," notes Mike, "but I thought it was indiculous. They persuaded me though and I went for it and piaced an ad. I estimated that if I managed to sell 20 copies at a fiver each then it would pay for the advert and really feel I'd achieved something!"

Mike's advert, under the name MC Associates, duly appeared in Your Computer but not before a light-hearted argument with his wife. "Bridget thought £95 for a quarter-page advert was throwing money away," remembers Mike, the memory of this strange domestic altercation bringing a gnn to his face. "So I offered her a bribe: I promised her if the game made any money, I'd buy a dishwasher out of the profits" Hence the dishwasher game was born and fortunately for Mike (or unfortunately, depending which way you look at rt) Tyrant Of Athens sold 200 copies within two weeks. Mrs Cohen was presumably very pleased - as was Mike with the sales of his first effort.

Enthused by Mike's success, Roger Lees purchased a ZX81 and began coding. Using the name Lothionen, he produced a similar text-based strategy game called Warlord, based on one of his own particular favourite period of history, feudal Japan. Mike had already created a follow-up to Tyrant Of Athens, Roman Empire, and it quickly proved to be even more popular than its ancient Greek predecessor. Yet despite these successes, Mike and Roger were still working separately on their games, with

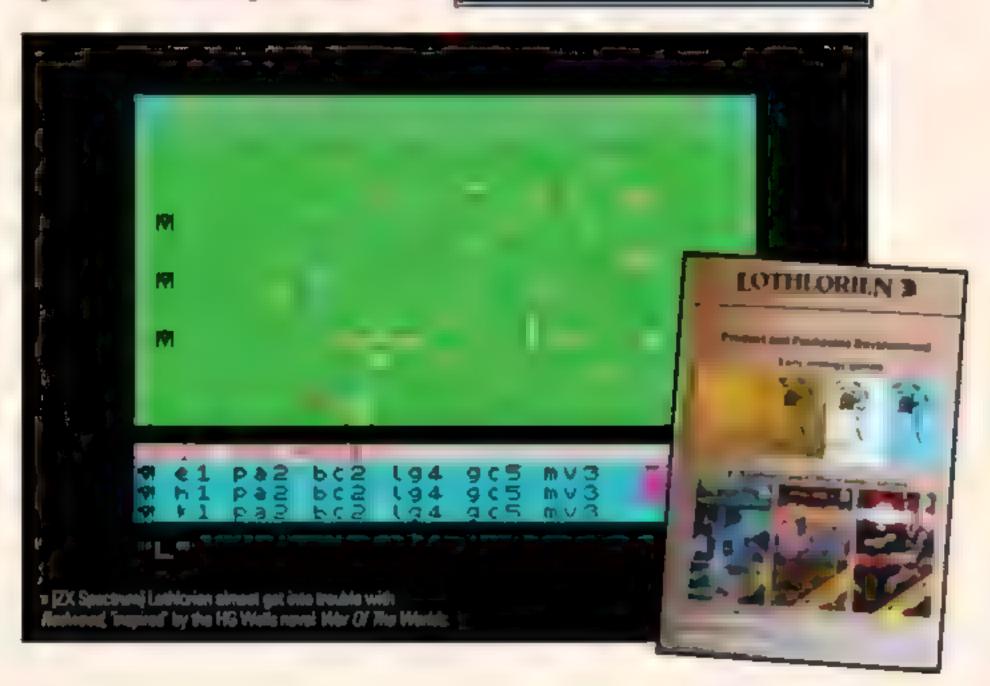

their wives heiping them to copy tapes, photocopy instructions and post the numerous packages off. Thank goodness for all that spare time saved by not having to do the washing up, quips Retro Gamer Mike smiles. "I guess Bridget was the associate. She was certainly a great help." After six months of Roger and Mike working separately on seiling their respective games sales were strong enough to suggest a step forward "We were quite busy so thought we'd either better form a company and start doing it properly or just stop and concentrate on our day job," says Mike The two men joined forces and names MC Lothlonen was born

he new company began in earnest in the summer of 1982. Re-releases of Mike and Roger's ZX81 games were the first games, followed by the respective ZX Spectrum versions. But they were still working from home. "We started to become aware that there were larger volumes to be had and so we began to get our tapes produced professionally," explains Mike, "which meant I was having these huge boxes delivered to the house all the time " Clearly some dedicated premises were urgently required if Mike and Roger were to avoid divorce proceedings. "Our wives were getting fed up with these boxes

and thousands of cassettes everywhere so we bought an office in Poynton and moved the operation there, taking on a couple of programmers and secretaries. While I had been working at home I had a shorthand typist who used to come in and do my correspondence and stuff because we had no computers to do word processing back then. It seems so crazy now

One of those early programmers was Steve Hughes who approached Lothlorien to see if they could collaborate together. "I'd written a game called."

THE LEGEND OF MORRIS TWO-GUN' COHEN

The unusually titled MC Lothlorien game Two-Gun Turtle was inspired by Mike Cohen's uncle, the legendary Morris Two-Gun Cohen. Born in Poland in 1887, Cohen's family emigrated to London shortly after his birth. He was shipped off to Canada in his late teens in an attempt to reform his errant ways. Cohen wandered throughout Canada's western provinces and when he came to the aid of a Chinese man who was being robbed (an act unheard of at the time), his reputation within the Chinese community grew immeasurably. Post-World War One (where Cohen saw action at Ypres) Cohen found himself enconced with Sun Yat-sen, Chinese revolutionary and one of the

founding fathers of the Republic of China, Cohen became a trainer for Sun's army as well as his personal bodyguard and began the habit of carrying a second pistol, hence the evocative moniker. After Sun's death in 1925, Cohen worked for several South Chinase leaders, gaining the sinecure rank of general before joining the fight against the Japanese invasion in 1937, the discipling the fight against the Japanese invasion in 1937, a discipling the fight against the Japanese invasion in 1937, still in his spiritual home of China.

We'd looked at diversification and in some ways maybe we were naive

MEE I, II , II, STA EXPANSION THE LATE ECHTIES

Beetlemania and another called Bedlam, both for the ZX Spectrum," says Steve 1 My partner at AWA Software, which was a really tiny part time venture had enough so he made the contact and introduced me to Mike Cohen," Steve would soon be developing further arcade games as Mike and Roger sought to expand their roster of software. "Roger and I weren't really programmers," says Mike, "we both knew a bit of BASIC and a little more but that was it. We knew we had to do something other than strategy in order to give ourseives a little bit of a sales boost. Steve had already written a couple of games and his code was very, very, good." Despite not working directly on the MC Lothionen payroil, Steve Hughes often visited its office. "Their office was above

a couple of shops and dominated by a receptionist called Arline who had a very expressive personality and a penchant for announcing she was 'shaking the dew from the lify' whenever she went to the loo," he laughs.

One of the more successful games
Steve Hughes developed stemmed
from an original concept by Mike
Cohen. "I thought of a great idea for
a game called Micro Mouse Goes
Debugging," he grins, "where the
player controlled a little mouse putting
letters into sequence in order to form a
program. That sold really well." Rather
more problematic was the re-release
of Bedlamt: the artwork for the cover
bore more than a striking resemblance
to a certain heavy metal band's iconic
mascot. "I can't remember who

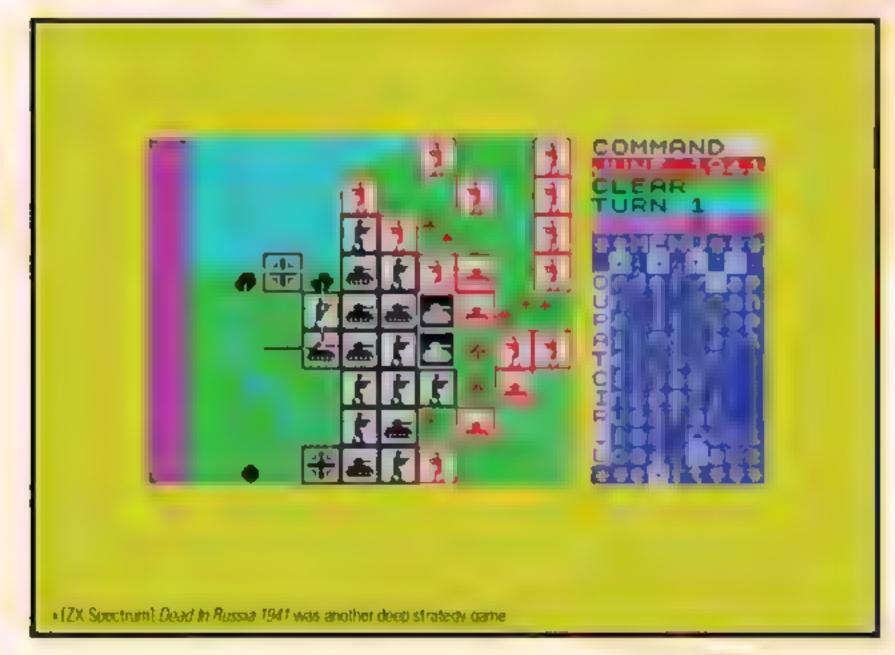

"but when the game was released we got a letter from Iron Maiden's lawyers almost immediately because basically the artist had copied Eddie!" Bedlam was swiftly withdrawn from sale and the cassette inlay replaced with a distinctly non zombie-like image.

Lothlonen was also using other independent programmers, taking its submitted games and paying royalties to publish them under its brand. Gnd Patrol was a gnd-based shooter from Simon Cobb (who joined MC Lothlorien full-time as a coder), Hyperblaster, an Asteroids clone by Matthew Rhodes and The Stolen Lamp an obligatory text adventure, in addition, of course, to further wargames with American Civil War simulation Johnny Reb proving the most popular (Roger Lees)

was a particular fan of this era). And with its name becoming established, Loth orien began to focus once more on the strategy genre, receiving a high quota of efforts from third parties. As 1985 dawned, Roger and Mike felt that, while they were selling some excellent games, they weren't doing them full justice. "We were looking at marketing and circulation because we were having a lot of difficulty breaking into the shops," recalls Mike. "We were looking for more volume and a so a means of financing further development because we didn't have a lot of money and needed to become more capitalintensive." By now Lothlorien had a team of programmers including Dave Selwood, Peter Carmpouloni and Steve Cobb, in addition to free lancers such as Steve Hughes and Roger Womack

As a smartly dressed secretary refreshes our coffee cups, Mike leans back and reflects on a year when Lothlorien really began to open up its ambrions "We entered into an agreement with Argus Press in London," he says, "where they took care of the marketing and distribution for some of our new games." The first game under the new arrangement was The Bulge, written by David Bolton of Choice Software David recalls: "I'd done an arcade game on the C64 called Buzzby, but my passion was in wargames having played tabletop and board games by Avaion Hill and Strategy & Tactics since I was 13." With its colourful display, fast gameplay (for a wargame) and user-friendly interface, The Bulge was an instant hit and a superb start to the

DEFINING GAMES

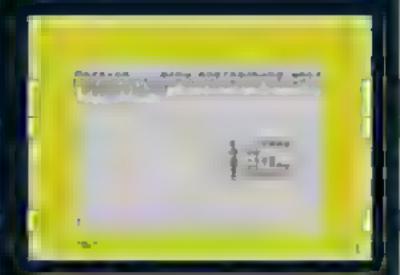

Johnny Reb 2

MC Lothlorien had already had a consistent seller with Johnny Reb in 1984, From an original idea by Mike Cohen and Roger Lees (who was a huge American civil war fan), it was released on various platforms to reasonable success. When it was suggested they create a sequel, Choice Software, or rather David Doiton was given the task of codating the first game.

Tyrant Of Athens

Starting life as a ZXB1 game written by Mike Cohen, if more than a second more within second more second me consumer of the ancient Greek city. Set in the 5th Century BCE, it was your duty to fend of rival cities, in addition to the network of the most found state in Greece.

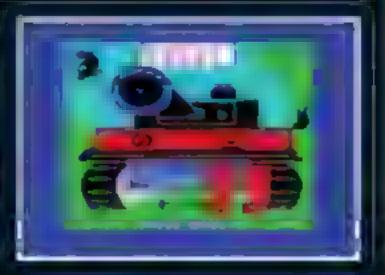

Micro Mouse Goes Debugging

By 1983, Roger and Mike were well aware they needed to expand Lathfuriers range of genres if a was to succeed. Micro Mouse was an original idea from Mike Cohen where the titular mouse would need to crawl into his computer to rid it of an unpleasant wine. Micro Massawas a fun if from all a marked the beginning of Lathfurier's arcade series.

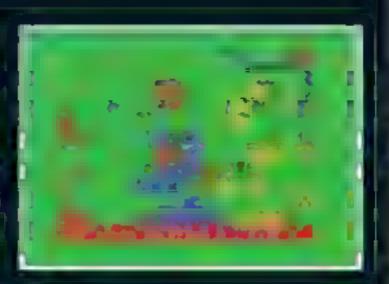

The Bulge

David Bolton's first game for MC Lothiorien was also the first in its partnership with Argus Press. Released in 1985, The Bulge (or Battle Of The Bulge as it was also known) was based around the pivotal moment in World War Two when the Allien successfully fought off a desperate and last either become financies attack.

Waterloo

Lothlorien didn't confine its wargames to just ancient and modern history, and Waterloo simulated the hattlemake of disigium in 1995. The first impression of Waterloo was the hugely improved packaging that Lothlorien had forked out for, partly justifying its £9.95 price tag. Factors such as terrain, morale and some obeyer Ai made. Waterloo an intriguing game.

Argus-Lothlorien relationship "It was probably a bit too difficult," admits David, "but it was a real-time game with loads of fun to write." The coder would meet Roger and Mike in 1986, when he produced his accord to the fire the units to form up and cross the river was interesting – all in Z80 assembler!"

e return to the evoidpanelled room and Mike Despite the early success of The Bulge, he declares not much came of the Argus relationship, except when they were pointed in the direction of an acquisition opportunity Nearby, fellow software house and publisher of the legendary Chuckie Egg, A'n'F, had recently gone into liquidation. "We want to the importantians, post full extrait over received to and took over the rights to their garmas," explains Mike. "We also took on some of its staff and Doug Anderson joined us. He was a great guy and a great programmer " Lothlorien bought new premises in Presework to accommodate afaff from both companies and promoted A'n'F's Doug Anderson and Martin Hickling to director status. After a brief period as Starsoft, fron Design was created in 1986 as a new venture. combining the talents of MC Lothloren and A'n'F As was common with many smaller publishers of the era, Icon Design became principally a developer rather than publisher, coding games mainly for subject producer Mastertronic (such as the Spectrum conversions of Kikstart 2 and Ninjal and other companies such as Ocean (Rastan) and Grandsiam (Peter Shilton's Handball Maradona) Icon Design expanded rapidly - too rapidly admits Mike - with further offices opening in St Heiens and Ardwick Mike recalls the relationship with Mastertronic

In particular with fondness, "I went out to lunch one day with Frank Herman [Mastertronic boss, and one of its founders] and discovered we had quite a lot in common. We were both from Jewish backgrounds and I made some dodgy comment wondering about whether we were related. I told Frank I'd had an uncie who had been a genera in the Chinese army and he said 'that's funny so did I!' We never discovered precisely what the link was "

Sadly, Icon Design/Lothlorien began to struggle towards the end of the decade Unable to afford the lucrative film and arcade licences that had become common, and lacking the expertise and knowledge to compete in the new 16-bit market, work from Mastertronic dried up as it focused on its new Sega deal "We dilooked at diversification and in some ways maybe we were nave," says Mike, shifting uncomfortably in his seat. "I'm not sure there's much we could have done differently or better, except perhaps have more technical staff earlier than we did " A more significant issue for Lothlorien was the way in which its strategy games sold compared to other genres. "We never had any particularly 'big' hits, but the sales would continue for some time. After all, it was a niche. market so if someone wanted to play a computer version of Waterloo for instance, there wasn't a lot of choice " Inthe end Mike and Roger attempted to make the closure of Icon Design as painless as possible for its employees. "I think we had regrets about the way it finished," he adds, "and it was very stressful at the end as we were responsible for a lot of people's incomes But we had some good fun and I believe we did achieve something and most of the people who worked for us went on to make a success of themselves. And I don't think you can have a much greater egacy than that " 🛠

Our thanks to Mike Cohen, Steve Hughes, David Bolton, Roger Womack and Steve Riding.

HOMEBREW MONSTERS

Dave Akers explains why he still enjoys making games for older systems

it's not very often a professional programmer returns to their roots. but that is exactly what Deve Akers di**d lest year when he returned** to his name, the Mattel Intellivision, He has now developed two homebrew! parmes for the system. Paddle Party and Match 5. Elektronite, a company that still supports the intellivision with professional quality games, published both of these titles. William Moeller in the owner of Elektronice and told us how te found Dave. "Dave uses the handle Catsfolly on the Atari Age intellivision The second second 2 is not a second

A STREET, SQUARE BOOK AND ADDRESS OF THE PARTY OF THE PAR

____ consoles. Both games can still be purchased, complete with a full colour, manual and overlay from the Elektronite website.

n another part of the building key programmer Dennis Harper had recently finished the wacky nver racing game Toobin and he soon became involved in the project too, as Dave ters us. "For this game he (Dennis) had written a level editor that ran on the arcade development hardware. Using this evel editor, he could create a new level using the arcade game controls then instantly play it and try it out. He could go back and forth over and over between editing and playing until he was happy with the level, and then he could upload it to the main computer to be included in the game " What you have to remember was that at this point in time programmers did not have what we know as modern day PCs. Programs were created and complied on terminals connected to a central computer, such as the Vax. The compiled program was then downloaded to an arcade machine that

had some extra buttons such as freeze

expensive box called an ICE (In Circuit

then goes on to explain in more detail

Dennis's involvement "Mark (Stephen)

Pierce) wanted this editing capability for

> work, we had a game that looked almost exactly like it looked when I first saw it - but now it incorporated the level editing code and Mark was able to quickly create the other levels for the game." Dave's contribution cannot

be underestimated here -- without his intervention and coding knowledge it is very likely that the project would have just been canned, as in its current state it was just too ambitious for all of the people involved

For the look of the game Atari had taken inspiration from a couple of its previous hits, Paperboy and Marble Madness, by employing an isometric viewpoint. The key gamepiay elements. were not actually that or ginal, at heart it was an arcade adventure with shoot-'em-up elements. Your mission was to explore the planet, rescue the humans, shoot the robots and defeat the alien invaders. It was the way the game was portrayed and a few unique design features that made it really stand out

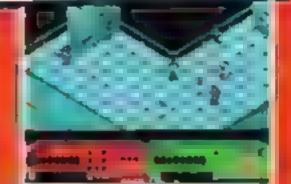

CONVERSION CAPERS The best and worst of Domark's various home ports

ZX SPECTRUM

The Speccy version of **Robot Monsters** lecks the calour of the others but the monochrome Visuals actually have i lot of detail and work iquite well. There is sleoi isome tantestic AY music For lucky Specey 128K owners. Everything rnoves at a brisk bacu. iliven in the two-player imade, and the control: Work well once you go used to Merri

COMMODORE 64

The C64 version in definitely the worst of lithe home conversions with it's tiny and bedly idefined sprites, poor ichoice of colours and the strange and rather ioff-putting scroking iroutine that meens the iscrsen keeps movindi isven When You have! stopped? The one iredeeming feeture herei is the excellent SID music throughout

AMSTRAD CPC

Of the original 8-bit loors the Amstraci iversion is probably the most impressive ||Aithough it has a small IDIBY WINCOW IT'S IT! ifuli colour and looksi Encredibly place to the inroscie geme. Theti isaid. It's a bit slower lthen the other versions.i especially in two-player jiand dosen't feature envi limusic, going for noise linound effects instead

ATARI ST

The one appearance of the Atari arcade ideme on an Atari home Imachine, the ST pulis off in tantantic conversionii lof Robot Monsters. 🕪 llooks simost identical to irts coin-op parent and lleatures some seriousivi good YM music tool The only thing that lets lit down slightly is their lloush scrolling, but it's listili a relatively minor icompromies overail.

SAM COUPE

One of the few commercial releases ito appear on the Sami Coupé, this conversion iof the game doesn't star: ioff well when you see all ithe intro screens were ire-used from the Speccy iversion (colour clash) included!). But things: ireally look up when you ipet into the game and itee the graphics from the ST version with inome excellent sound

We replaced the keys with the

COMMODORE **AMIGA**

Robot Monsters on the Amiga is pretty much identical to the Atari ST werelon, right down to the dodgy scrolling (The joniy real difference is in the sound department and for once the Amiga iosse out here with isome bratty rougii music that is no where inear as nice se its 15-bil irivals'. It's still a solidi <u>iconversion however</u>

from the other coin-ops of the time. The first of these was the control method that gave your character 360-degree movement and a lowed you to rotate and shoot at the same time. This was not as easy to implement as some might think and caused huge problems. with the home conversions of the game "The isometric point of view meant that characters in the game moved in eight different angles, so everything had to be animated at five different angles." Dave explains. "The sprites could be flipped to provide the other three angles but this took up a lot of graphics memory" The game also required you to find and activate switches in order to progress through each level. This initially caused some problems as Dave explains 'At one point management had put a lot of pressure on us to put the game out in an arcade and see how people reacted to it. We said the game wasn't ready yet, but they insisted, so one night Mark and I drove the game out to an arcade and set it up. At that time the player had to pick up a key to unlock the escalator. But the first person to try the game in the arcade picked up the key and then their character died before they could do this When the character reappeared, the key was gone, the player didn't have the key and the stairs were still locked!" The player was pretty miffed, and Dave could definitely sympathise. Unfortunately, there was nothing he could do "We were totally embarrassed. We refunded his money and went back to the lab to fix the software. Later, marketing told us

that keys were overused in videogames! So we replaced the keys with the big power switches, which we felt fitted the game's theme better anyway"

The game was moderately successful for Atari and was soon picked up for home conversion by Domark as part of the Tengen label. Sadly no console ports were ever released but the game was planned for Atan's own Lynx handheld. A big part of its appeal was the elements of humour that had been added by the programmers and picked up by audiences. "In the game there are slaves chained to the consoles, working If your character touches them, they are transported to freedom and you get points. But if you shoot them before you touch them, they change to a fried appearance, and you don't get the points when you rescue them. But when we were testing Robot Monsters in the arcades, some players if they accidentally shot one of slaves, would angrily exclaim 'stupid slave!'. They blamed the slave for getting shot, rather than their own carelessness!" Dave himself is still really pleased how well the game turned out and how it is fondly remembered by videogame fans. "I think the game turned out pretty well. The vision, as I saw it, was to make a fun two-player (sometric view Gauntlet type game with a Fifties retro science fiction theme, and I think we accomplished that " *

Special thanks to: Dave Akers and William Moeller for their help with this feature

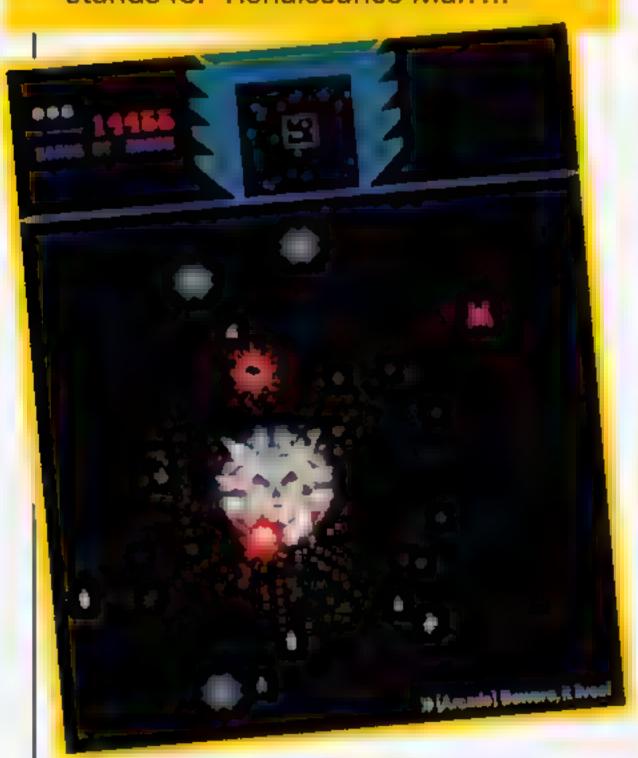

RJ MICAL

From the arcades to the 3DO via the Amiga and Lynx, RJ Mical is a celebrated figure in the hardware and software business. He tells Paul Drury about three decades of making stuff people want to play with

Whether he's producing great games, coding intuitive operating systems, designing groundbreaking hardware or writing novels, RJ Mical is happiest when he's being creative. At the age of 14, he built a bespoke Tic-Tac-Toe machine from bulbs and relay switches, which played a mean game of noughts and crosses and drained batteries for fun. After graduating from the University of Illinois, he joined Williams and contributed to some of its memorable arcade coin-ops before becoming a key player in the development of the Amiga computer. He was co-designer of not one but two prescient consoles in the shape of the Lynx and the 3DO and currently has his game face on at Google. He also enjoys paragliding, travelling to exotic lands and coming up with bizarre brain teasers. We suspect the 'R' in RJ stands for 'Renaissance Man'...

Since 2008, you've circulated a weekly conundrum called the Monday Morning Tickler. Is creating software and hardware a bit like a brain teasing puzzle?

[laughs] Fascinating! Yes, I send out a little puzzle once a week and I'll happily add any of your readers to the list! I worked out a long time ago that I had a bunch of talents and the best thing to do was to find something that brought them together in endeavours that took advantage of more than one of them. That's why I started doing videogames – I love art, I love music, I love animation and films and games and software and computers .. there have always been many pieces that fit together into a whole

You graduated with a degree in Computer Science and English plus a minor in Philosophy. Has that mix of science and the arts helped you during your long career?

Every day it helps me! I learnt to be a good communicator and I was exposed at a young age to some of the fundamental questions we have to ask ourselves. That's helped me as a game designer and a designer of software humans have to use. I was especially interested in metaphysics, the rules about the rules, which is fascinating for a game designer And when I start designing software, I write it out as a short story first and then fill in the code so it does what the narrative says it should

You joined Williams in 1983. What do you think it saw in you back then?

The only guy there that saw a flicker in me and decided to give me a chance was Noah Falstein. He and I have remained friends ever since and have worked on many projects together over the years, including right now at Google!

Your first project with Noah was Sinistar. What was your role on that game?

It was well underway by the time I joined the team but what they didn't have was the pizzazz! The core game was done but I got to do the explosions, the special effects and all the cool stuff

Sinistar is famous for its speech. Do people still come up to you and bellow 'Beware I Live' and 'Run Coward!' from the game?

All the time! [laughs]

You then coordinated the Star Rider project, Williams's first and only laserdisc game.

Star Rider was quite an undertaking. We had these wonderful design sessions where we'd challenge ourselves to think of alternate ways to think about games and game hardware. We tried to dream big and come up with industry changing ideas. Laserdiscs were very expensive and the cabinets had to be really well built to withstand the shaking customers gave them and not let the laserdisc skip. It was a real feat of engineering but in the end I found the game was boring. You were just rolling through a movie and I didn't think there was enough excitement in there

It's a very surreal game, like Easy Rider after they've taken the acid. Did you want to create something of a 'trip' with Star Rider?

laughs) Yes and no! We didn't sit down and say 'let's create something really trippy' but yes, a lot of my contemporaries had had those experiences. It was part of our culture. And at Williams, there was a lot of partying, when no one was looking, out in the parking lot. It was a pretty loose crowd. There was a certain *Yellow Submanne* quality to that game

It was just 'your contemporaries' partying then, not you?

I thought I managed to dodge that one I I'm not unknown for experimentation. Let's leave it at that

What prompted you to leave Williams in 1984 and join the fledgling Amiga project?

There was a healthy amount of networking once the Amiga project got underway and they invited me to join them but I blew them off... twice! It was a bit too weird for me, a bit too outside the experiences I'd had I was a kid, just starting in the industry and I had a good job that I enjoyed at Williams. This was a start-up in California and they wanted me to relocate and leave behind my family and friends in Chicago. It was scary. I ditched the first two times I was invited to see them

Why did you turn up the third time they invited you over?

Noah [Falstein] dropped a videogame on my leg! Noah, me and a guy called Rich were co-owners of the coin-op Red Baron, an awesome game. We were trying to move it one day and it fell off the dolly we were transporting it on. It was going to crash but rather

FIVE TO PLAY

Five great games that RJ had a hand in

SINISTAR

III RJ's videogame debut was this impressive, cackling shooter, with its memorable speech and merciless desire to crush and consume your tiny ship. Set in hostile deep space, you must mine crystals from asteroids, which become valuable 'simbornbs', whilst fighting off the immediate threat of enemy warrior ships. Meanwhile, a dedicated fleet of workers construct the ominous Sinistan a giant, hungry mothership, which on completion, pursues you with a roar and the sneering taunt of 'Run Coward!' The development of Sinistan was a difficult and convoluted one (see our Making Of in RG 125) but RJ helped add the 'pizzazz' that makes it a fine addition to Wilbams's roster

We know we're being churbsh suggesting this is 'one to play'. The unreliability of laserdisc coin-ops and the limited release of Williams's only entrant into the genre makes it unlikely you'll find a *Star Rider* in the wild (though we do know there's an original sit-down machine awaiting restoration in Funspot arcade's workshop). Emulation is also a chaitenge given the esoteric technology and besides, a big part of the experience was clambering onto the futuristic cycle in an Eighties arcade and imagining you were riding off into a surreal digital sunset. However, we urge you to at least watch a playthrough on YouTube or the like

■ RJ's key role in developing the Arniga computer meant he was in a perfect position to become a consultant to software developers as the machine found its feet in the mid-Eighties. He lent his skills and insider knowledge to many titles but his work on *Defender Of The Crown* was particularly crucial. When development hit trouble, he stepped in to help bring it to launch and it remains one of the defining releases of the Arniga's early years. Its tale of the Norman-Saxon power struggle for Medieval England was a showcase for the capabilities of the new machine and it established Cinemaware as a major creative force. Anyone for jousting?

ELECTROCOP

■ RJ had a hand in all six of the Lynx's launch titles but was most involved with this attempt to bring a 3D maze game to the handheld *Electrocop* has your heavily-armed law enforcer bounding through a fortress in search of the President's daughter, kidnapped by the imaginatively named Criminal Brain. Blasting the diminutive robot Walkers that patrol the corridors is satisfying and logging into a terminal to access some simple mini-games, including a rather sedate version of *Breakout* and a more rounded stab at *Asteroids*, is mildly distracting, though the game would benefit from more variety. However, it's a nice example of the console's potential and needs to be played.

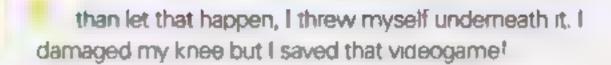

TWISTED: THE GAME SHOW

■ Of all the 300 games RJ was involved with, his biggest contribution was to Escape From Monster Manor, which he describes as "a B-title, not a strong player but a little 300 miracle". It was an interesting attempt to create a distinctive first-person shooter for the new console but given the profileration of the genre since then, it hasn't aged particularly well. Twisted, on the other hand, remains a marvellously oddball release and one that genuinely tried to utilise the machine's multi-media features. This collection of mini-games, ranging from simple stide puzzles to aural memory tests and trivia questions, is dressed up as a bizarre gameshow, complete with suitably deranged contestants and a manic host.

Erm, good catch but how does that lead to you joining Amiga?

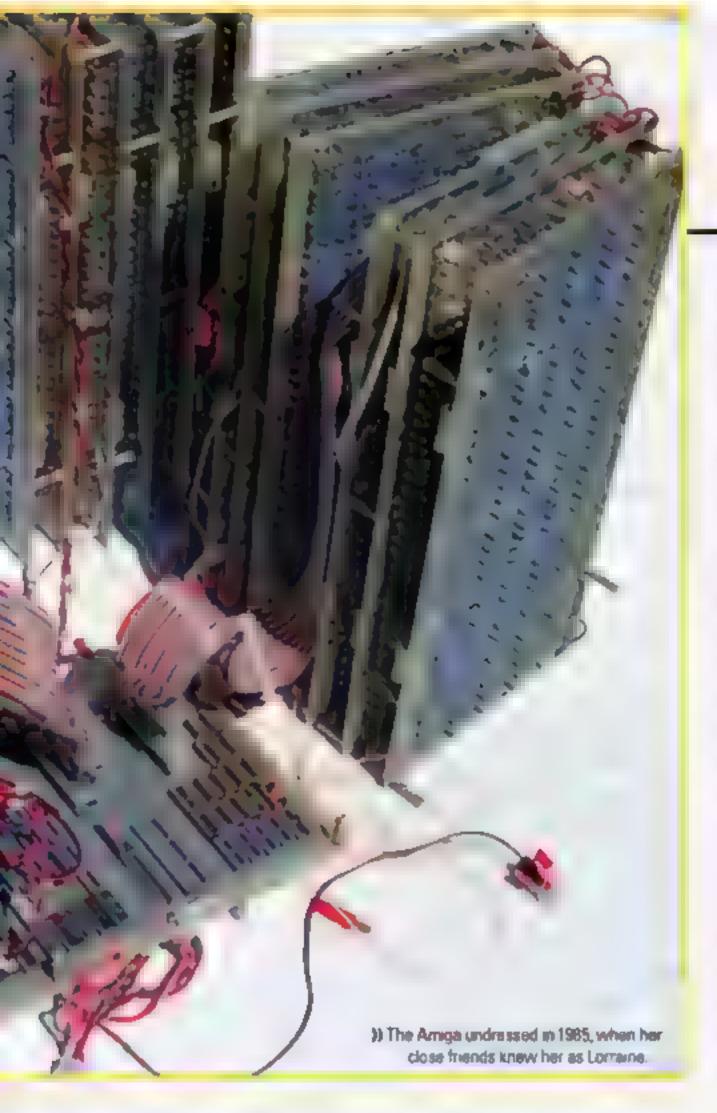

I was laid up because of my knee and couldn't join my friends on a trip we'd planned so instead I accepted this invite from Amiga. It was just something to do while my friends were away. I went to California on Amiga's dime, hobbied around their offices on crutches and interviewed there. It was love at first sight! I couldn't believe my good fortune that those guys were offering me the opportunity to be part of it. I said yes right then and there

How far along was the Amiga project when you eventually arrived?

I was one of their first engineers. There was nothing but ideas and mechanical drawings when I got there I don't think they'd even started laying out the silicon at that stage. The building was largely empty when I arrived and over the next year, we watched that baby fill up. We ended up jamming ten people into our poor ittle software lab. It was truly a wonderful little start-up environment. We had that good mental spirit and everyone was pulling at the same rope. I often miss that camaraderie

You are famous for your work on Intuition, the Amiga's operating system. Were you motivated by a desire to make computing more accessible to ordinary people through a friendlier interface?

Me and the others at the company were used to having access to computer power but our morns and brothers and sisters weren't yet. We wanted to make a personal computer that had all this great power, these colours, this great sound, at a price that anyone could afford and with a user interface that was accessible to my morn! I often used her as my menta model when I was designing Intuition. We called it that on purpose. It was easy to understand and you

didn't need to be a rocket scientist and remember 8,000 keys to use it

It sounds like you really wanted to make a 'people's computer' that everyone could use, not just the IT-literate elite.

It's a far more cynical time now and it's hard to imagine a bunch of kids getting together and saying they're going to build a new computer. We were young and naive but ambitious and the philosophy of the thing was as noble as you describe for many of us. We were trying to change the world! We were convinced what we were doing was the right thing for humanity, for civilisation

The Amiga was undoubtedly a great success. Why do you think it did so well?

I think we hit the demographic we were aiming for. I got a letter the other day from a guy I'd never met who wanted to thank someone for the Amiga computer. It had changed his life. He'd had this moment of revelation and instead of doing what he had expected to do, he saw the power of the Amiga and had this desire to do computer graphics. He's now a well-established figure in the industry and he said it was the exact moment when he saw the Amiga that changed who he would become in life. It's stuff like that. Bringing that joy... we reached the people we wanted to and changed lives.

What were your thoughts on the Atari ST, usually seen as the Amiga's main competition?

The ST Amiga rivalry was something that existed in the press and shows up a lot in the history books but from our perspective, we didn't feel we were competing with them. We knew the ST engineers and some of them were really good friends. They got a late start compared to us and were up against the calendar. They worked amazingly hard, burning the candle 24 hours a day, and they did a spectacular job. They got a device out that was almost competitive. It was an awesome effort but I never considered it a threat. To me, if felt like a less matured effort. The Amiga's user interface, its display capabilities, the quality of the software that soon became available for it... all these things piled up against the ST

You became Director of Software at Amiga but then left in 1987. Had something changed at the company in your opinion?

I had a long chat with my boss, Dave Morse. He was an amazing person and a great confident. We talked about what Commodore's acquisition of Amiga would mean and one of the things he said was if I was going to capitalise on the things I had learned at Amiga, I should start my own consulting company. So I did! I was in position to help a lot of people make their Amiga software better because if anyone knew that machine, it was me! I had a lot of fun and worked on a bunch of software

One of the games you worked on was *Defender*Of The Crown. Is it true you made Kellyn Beeck slide instructions under your door so he wouldn't disturb you while you coded?

Yeah, there was that one time (laughs). That game has a chequered past with me, which is why I don't mention it on my resume. It didn't have the best business outcome. There were some dicey players and I was a new contractor just cutting my teeth. I learned the hard way I haven't talked to any of those Cinemaware guys since

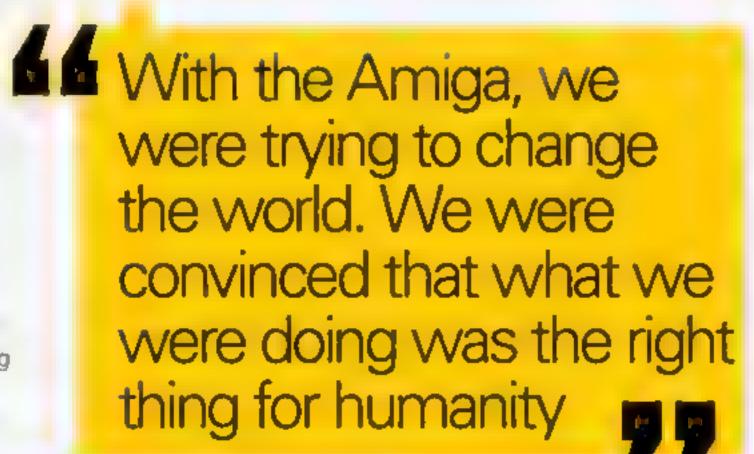

Was it around this time that you had the idea for a handheld games console?

Dave Needle, Dave Morse and I decided to create a colour handheld game device and in quintessential Silicon Valley style, we sat at a restaurant and drew the basic block diagram on a napkin. It was Morse's job to find the funding for what would become the Lynx but what he found was Epyx. They had the money and we'd become part of them. We set up a proper business agreement to do it for Epyx rather than on our own. The big attraction was that they had an entire games development staff and they had game IP that we could get on to the Lynx right away. We'd be partners... we'd be brothers!

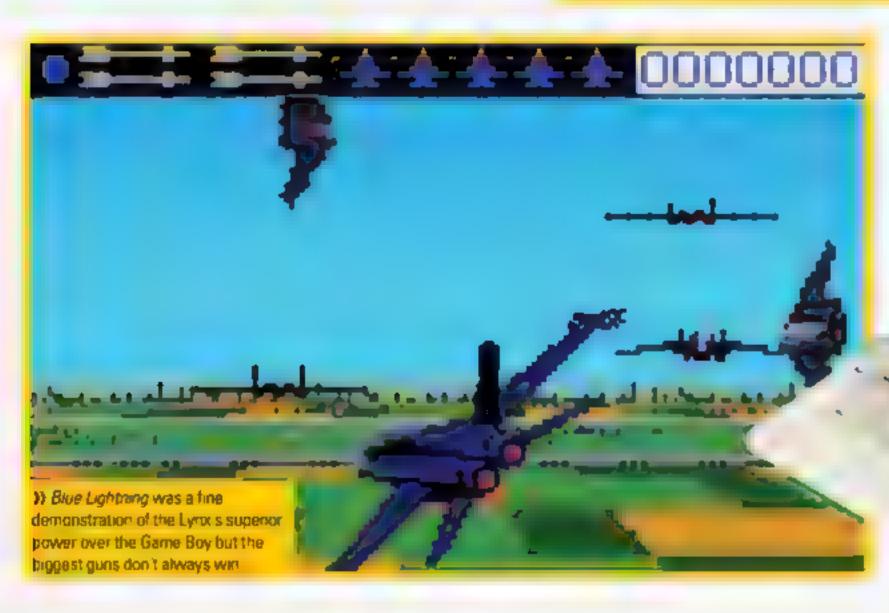

How do you start planning when developing a new console? Is it 'what would a dream system have' or 'here are our limitations, what can we do within them?'

I guess the answer is we spent the first few months just discussing what could it have. Once we started doing the research and found out the limitations we would encounter, then it became 'what's the best we can do given the constraints?' but that didn't come for quite some time. Like with the backlight – we knew it was a critical feature because we wanted the biggest and brightest display we could. The reality was that the technology we looked at was so expensive. There were viewing angle problems and hotspots.

from the light, all kinds of things. Then the magical

*The Armga was a work of love" enthuses RJ. Even Andy Warhol fell for its charms.

day came when a guy found the answer and we realised we could have a gorgeous display!

When Atari got involved, were you pleased to have a big name on board or wary it would compromise your vision for the Lynx?

[sighs] We weren't womed about them compromising the vision but we were concerned about them compromising the company. From our own direct expenence and that of our friends, we knew the reputation of some of the players at Atari was substandard. We were worried the Lynx project would get caught up in that. It troubied us and we wished it wasn't happening. We told Epyx if the deal went ahead, we'd walk. They went ahead... so we walked

You must have been devastated at leaving behind the machine you'd invented before it was even officially released.

It hit Dave [Needle] harder than me, I think, but we were both frustrated with the outcome. We'd worked hard and inspired a bunch of people to get involved with that wonderful project and to have it end that way ... we told everyone what would happen – and then it happened! Some of the people involved with the new ownership of the Lynx had really bad reputations with hardware manufacturers in Asia and with software developers all over the world. Everyone knew about these guys. Suddenly all these sweet deals we'd made for low-cost parts for the Lynx dried up on them. They'd be like, "We remember you from five years ago. Guess what – the price just doubled!"

So you think if Epyx hadn't gone with Atari, things could've been very different for the Lynx?

I'm not the business head guy but yes, I think if Epyx had found a better path... but they were out of cash. We showed it to Sega and hoped they would buy it instead of them doing what became the Game. Gear. If they'd bought the Lynx I think that could've completely changed everything. Even if Epyx had managed to scrape together the money themselves and released it at the price we believed we could hit, which was low, like under a hundred dollars, things could've been very different. Even more important a factor than the price was the software. We had deais with all the major players and we'd worked out a magnificent library of software for the Lynx for when it shipped but after Atan took over, they all said, 'Are you

kidding? No f***ing way! We're not taking a risk with you and end up losing again. Pay us for last time first, then we'll talk!' They just stopped developing for it

)) The 300 prototype, set up at

the CES in 1992. Con titrip over

Undeterred, you began designing another console, again with Dave Needle and Dave Morse... and again you sketched it out first on a restaurant napkin!

Yup! I believe Needle has the Lynx one, I have the 3DO one

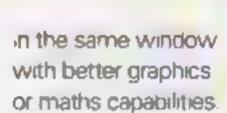

This was to become the 3DO, another forwardthinking machine. What was your initial vision for the console?

The goal was to put out something low-cost with state of the art hardware, so no other machine could launch

Trip Hawkins had us all believing that the 3DO would be built into the walls of houses!

In addition, we wanted it to be the first system to ship with a built-in CD-Rom. The advantage would be the sheer amount of content we would be able to pack into a game

N Trip Hawkins at the

launch of the 300 in 1993

How did you feel when Trip Hawkins got involved? Were you excited or a little tentative?

We were sober about it. We were concerned about a lot of the stories we'd heard about Trip in the industry and what it would be like to work with him and what independence we'd be giving up. We were mildly apprehensive about that part but on the other hand, this was Trip Hawkins, who'd founded the largest software entertainment company on the planet! He's had some highs and lows with various companies since then and he's kind of like the rest of us now, but back then, he was the Electronics Arts guy who was taking the game to the next level.

What did he bring to the 3DO project?

The was, and still is, an awesome salesperson for a concept. He can talk it through and get everyone sat round the table to say yes. He's a consummate professional. A performer, a presenter, a communicator of ideas... he had us all believing that 3DO wasn't just a great system, it had the potential to change the way we did entertainment in our homes. He had us all believing the 3DO would be built into the walls of houses. It would stream in stuff and you'd have screens hooked up to it all over the house. It was your internet access, your movie access... it was truly prescient and a lot of that came from Trip

The 3DO sadly never quite delivered on its early promise. What do you think went wrong from your perspective?

The hardware was great, I think the operating system was awesome and in the beginning there was a lot of respect for Trip and the 3DO. It was being embraced by the industry and the public – the value of the stock gave us the financial muscle to get the thing out there... and then they brought it out at that indiculous price

Do you see the high price tag as the key mistake? Absolutely. The thing that makes Nintendo, Sega and

YOU ASK THE QUESTIONS

We were inundated with questions for RJ. Here is a selection of his replies

NORTHWAY: Did you see the 3DO operating system as like the Amiga mark two?

We got better as the years went by. The first Amiga operating system was truly created by kids but the next one was better and the next one was better than that. When we got as far as the 3DO, we finally knew what we were doing (laughs). The 3DO was a professional device. The Amiga was a work of love. It was a noble pursuit; we were giving something to the world and I've never had an experience like it since

SZCZEPANIAK; Who were Fred and Deloris, the 'mentors' you've referred to in the past?

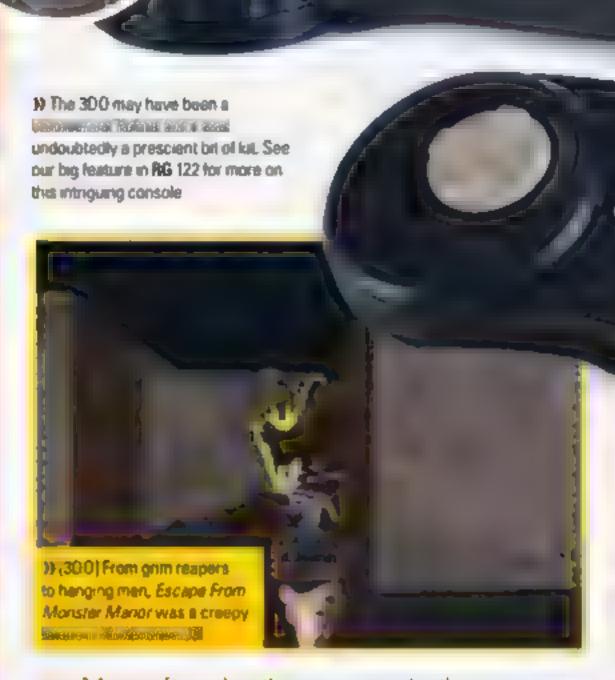

They were a wonderful, wise, well-travelled couple in their 50s. He was the Dean of the College of Architecture and Art and she was the librarian at the University of Illinois where I went to school. They kind of adopted me into their lives when I was 19. They put their arms around my shoulders and helped me learn and grow. They really changed my life. With the 3DO, we created two graphical techniques which we couldn't think of good names for, so we called them Fredluscing and Delorisizing!

ANTSBULL: What was it like working with Jay Miner?

experience has so much heart. Well, a lot of that came from Jay. He wanted the Amiga to change the world and we became believers in his religion! In the final dark days before Commodore bought us, when it looked like we were going out of business, it was Jay who took out a second mortgage on his home so we could keep operating. He was that kind of guy. He was the king of Amiga and I miss him so

MERMAN: What game made the best use of the hardware you designed?

That's a hard question! The one that took me off guard and took advantage of the system as well as being an enjoyable experience would be F/A-18 Interceptor on the Amiga

now Microsoft work is those guys make their own hardware. They are incentivised to make it better and more cost effective because they'll realise profits from the software. In the early days, they can even lose money on hardware. In the 3DO's case, you couldn't ask Panasonic to lose money on the hardware! They weren't interested in selling the console at a loss so 3DO could make money on the software. No one saw that, all the way up to Trip, and I include myself in that

Could something have been done to lower the retail cost and get more units sold?

None of the manufacturers were prepared to drop the price because that's what it cost to produce and they had to make a profit. Way too late in the day, we realised we needed to pump money into their coffers, so 3DO raised the royalty on software and gave it to the manufacturers but by then it was already too late. The 3DO had got what one of my friends in the industry calls the 'stink factor'. Once something smells bad, it always smells bad and every time you hear the name, you wrinkle your nose a little

Were you involved with developing the Panasonic M2? Could it have been a PlayStation beater if it had been released?

I was involved but not directly. I had a position called 3DO Fellow by then, which meant I could get involved with anything I wanted to. I was part of the M2 design meetings, especially the operating system, but not so much the hardware. As for competing with the PlayStation, I don't really know what they were planning for the games side

You left 3DO in 1995 and for the next decade you were involved in many interesting start-up projects, including a proposed handheld console for Ericsson.

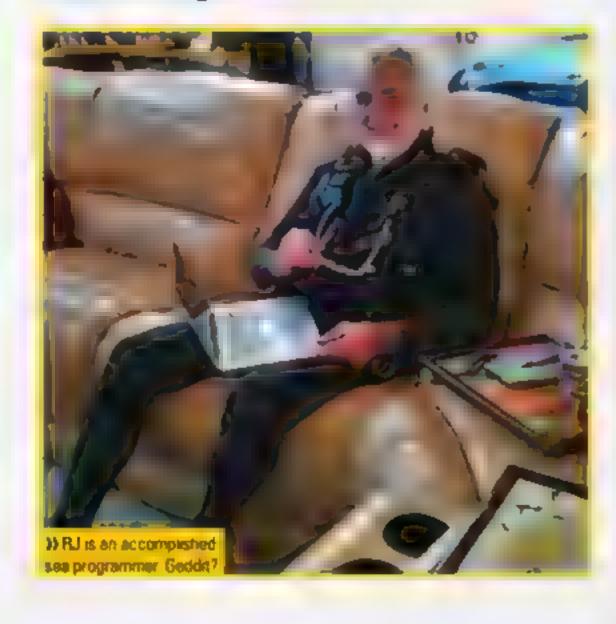

I'm so heartbroken that never saw the light of day. It would have rocked. Imagine the Sony PSP but more rounded, looking more like a Lexus than a Mercedes. It

had two joysticks, shoulder buttons and a PSP-quality display and we had a plan for online distribution that pre-empted everything that's out there now. We even had mock-ups of the stand we were going to have at E3! Then, in 2000, Ericsson had a major crash and they pulled the plug. We were stunned. I mean, this thing was vibrant and awesome and ready to go. I still have the prototypes!

You went on to join Sony, working on system architecture and tools for the PSP, the PS3 and the Vita, and now you're director of games at Google. That sounds like an exciting gig!

It's like I've landed in engineering and invention heaven! I'm serious! I work in the Fun Propulsion lab and we want to make Google number one in the game space. We have lofty goals and we know we have a lot of work ahead of us but I'm surrounded by really smart people – decent, honest people – with different views and perspectives and Google really promotes cooperation, communication and sharing. It's a love-fest working with them!

Visit www.mical.org for more on RJ's amazing career and to sign up for his Monday Morning Tickler. Thanks to Martyn Carroll for supplying additional images.

Robyn W. zardstici

- Sega
- Game Gear
- 1996

Sometimes you have to see something for yourself. I'd fallen in love with Sega's Panzer Dragoon

Saturn, and eventually bought all three games. I'd love to tell you the story about how I purchased Panzer Dragoon Saga for just three British pounds, and how our current staff writer Nick Thorpe nearly bought it from me (at a greatly inflated price of course) at CGE UK 2005 but that sia tale best saved for another day

No, this is the sad tale of when I realised that the version of Panzer Dragoon Mini that was in my head turned out to be nowhere near its reality. I'd experimented with the Game Gear after playing with a friend's and while it wasn't a patch on Atari's Lynx I loved the Sega exclusives it offered.

As a result Panzer Dragoon Mini was top on my list and became one of the few imports I bought for the machine. I needn't have bothered, as it was a world away from previous games. Clearly aimed at younger gamers, it featured basic visuals, an erratic reticule and simple enemy waves. Gameplay switched between into-the-screen. Space Harrier-style flight and side-on shooting, but it couldn't hide the bland approach of Segals game.

I completed the game – I'd paid £40 for it after all – but it was a bitter pill to swallow seeing one of my favourite modern franchises stripped back to its bare bones like that **

>> Now both parts are available, we've decided to review Broken Sword 5: The Serpent's Curse. Has the wait been worth it? You'll have to read the review and find out. We also take Mario Golf: World Tour for a spin and get to grips with System 3's Putty Squad

Broken Sword 5: The Serpent's Curse

Like ShadowRun

Returns, Broken Sword

5 started off life as a

Kickstarter project.

It easily smashed its

\$400,000 pledge price

JUST LIKE FOOTBALL IT'S A GAME OF TWO HALVES

- DEVELOPER: IN-HOUSE
- » PLAYERS: 1

GRIEF-HISTORY

» The original Broken Sword was released in 1996 and quickly won acciem due to its smart story, fustorical stant and carefully balanced puzzles, it's gone on to raca ve sevora) notable seque s with The Serpent's Curse starting off as a Kickstarter project

PC Just getting to interact with

certain characters can be a puzzle

and we're now finally getting to enjoy the fruits of Revolution Software's labours.

As with previous games in the senes, The Serpent's Curse continues the adventures of George Stobbart and Nicole 'Nico' Coilard, as they travel around Europe looking for an artefact

While attending a Parisian art gallery that George's company is insuring, a thief steals a seemingly unimportant painting and kills the art owner in the process It's a solid premise and is heid together by Revolution's typical attention to detail and some extremely dramatic pacing. As George and Nico investigate further, they soon uncover a dastardly plot that involves a religious order known as the Gnostics, which could bring about the destruction of the world

After associating the series with the Knights Templar for so many of the previous Broken Sword games, it's refreshing to see Charles Cecil and his team tackling different religious. works - in this case the Gnostic Gospels - and adding their own spin to it. The story is well-crafted, never feels too bogged down in history and zips along at a nice page. Cecil is no stranger to weaving an imaginative yarn and while the story and payoff aren't up to the standards of the original game, it's still a very enjoyable ride George and Nico are as charming as ever and remain a totally believable duo while many of the new characters are just as well

Another charming aspect of The Serpent Curse's story is just how much fan service has been woven into it. Numerous characters such as Sergeant Moue, Fleur and Lady Clarissa Piermont are just a few of the characters to reappear, while there are plenty of other nods to past games, including a brand new goat puzzie (although this time around it's much,

written too.

 [PC] The map system is a nice. touch, working nicely with your investigating in Episode One

 (PC) Puzzles are very easy in Episode One, but the difficulty does ratchet up in Episode Tivo.

*PICHS OF THE MONTH

DARRAN **Broken Sword 5: The** Serpent's Curse It's not perfect, but I really anjoyed my time with George and Nico.

NICK Mario Golf: World Tour Some odd design choices mar an otherwise enjoyable game of golf.

A Short History Of Broken Sword

Broken Sword: Shadow Of The Templars

The original Broken Sword remains the best game in the series. It's exceptionally well paced, has plenty of entertaining characters to interact with and benefits from a tight, witty script. Later remasters included a brand new section where Nico is playable at the game's beginning.

Broken Sword II: The Smoking Mirror

Charles Cecil and his team moved away from the legend of the Knights Templar to tell a far danker story, it benefits from improved engine, but wasn't as critically popular, it introduces Nico as a playable character at certain points in the game.

Broken Sword III: The Sleeping Dragon

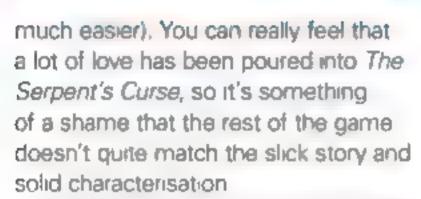

The Sleeping Dragon was controversial for some because it's the first Broken Sword game to be in 3D and not be a traditional point and-click adventure. While it suffers from stiff controls and repetitive puzzles, it benefits from a fantastic script and a far more cinematic feel than its predecessors.

Broken Sword The Angel Of Death

This was a collaboration with Sumo Digital, which saw the series return to its point-and-click roots. It still suffers from some clunky controls but the puzzles are far better, while the overall pace and acting is much better than previous games interestingly, it's the only Broken Sword game that's a PC exclusive.

 [PC] The goat is a wolcome touch for fans, but he does outstay his welcome somewhat

Take the puzzles for example. While many of them are decent and well thought out, few of them are truly memorable. They certainly get a lot more obscure in the second half of the game, but the vast majority of them won't have you scratching your head for very long. Many of the puzzles are very obviously signposted, with verbal hints from the main characters, which suggests that Revolution is more interested in you solving the actual story than getting stuck and never discovering its conclusion, It's admittedly a difficult line to walk, and it certainly falters a little in the second half of the game, but there's little here that's as frustratingly difficult as that goat puzzle in the original game

It's not just the puzzles that are inconsistent, Broken Sword's art design also wobbles somewhat. The Serpent's Curse features the same beautifully hand-drawn locations that have appeared in the first two games, but these beautiful reproductions of London, Paris and Spain are marred

by annoyingly out-of-place character models. The 3D models used feel dull and lifeless and oddly animated, pulling you out of the otherwise stunning locations. It's not a game breaker by any means, but it does become jarring and makes you wish that the series had just stayed true to its original roots

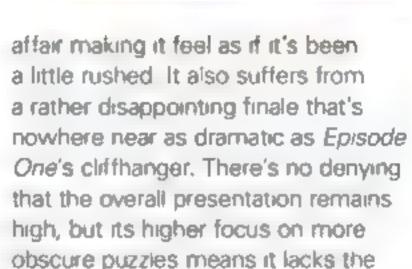

Fortunately, while the visuais are a little lopsided, the same can't be said for the audio found in *The Serpent's Curse*. It's of a high standard throughout with suitably moody music that keeps pace with whatever is happening on-screen It's complemented by some highly entertaining voice acting, with Rolf Saxon once again on fine form as George Stobbart. He deftly delivers Cecil's tight script and, along with the rest of the cast, helps breathe life into *The Serpent's Curse*'s entertaining and dynamic characters

Less impressive is the noticeable difference between how the two halves of the game play out. Episode One is a lot more enjoyable due to its investigative nature that allows you a certain amount of freedom as you can navigate around a map on your search for clues. The second half of The Serpent's Curse is a far more linear

▼ SOMETHING NEU

The pace of the game throughout is good though and there are plenty of opportunities to switch between both main characters, giving *The Serpent's Curse* a nice film-like fee It certainly doesn't outstay its running time (around 12 hours) but it does feel

variety of both Episode One and other

games in the series

a little too familiar, as if Revolution was more concerned about simply keeping its backers happy, rather than moving the series in line with newer point-and-click adventures. A solid outing that perhaps plays it a little too safe

It's certainly not adding anything new to the genre, or the series for that matter, but the story is well told and it's always a pleasure to be around George and Nico. An enjoyable and entertaining yarn.

► (PC) The backdrops are scrumptions and beautiful to look at, it's a shame the characters aren't as impressive

 [PC] You can play as Nico at various parts of the game, but the focus typically remains on George

Score 75%

#DOWNLOAD OF THE MONTH

NES Remix 2

You can't help but feel a little cynical when you're playing NES Remix 2. There's no doubt that it's a highly enjoyable game that improves on the original, but it's incredibly quick turnaround suggests that Nintendo was holding the best bits back, to ensure that it would get two bites at the gaming cherry.

Cynicism aside, it's hard to not be impressed, as there's a lot to like about NES Remix 2. If you've never played the original, it's essentially a selection of WanoWare-style mini-games based on some of Nintendo's most famous NES games. While the original was let down by a number of clunky titles and a baffiing abundance of sports games,

INFORMATION

- » System: W≡ U = Buy it for: £8.99
- Buy it from: Nintendo eShop

this sequel is far better. Yes there are fewer games this time around, but the overall quality is far higher, which in turn makes for more enjoyable mini-games One minute you're sucking enemies up as quickly as possible in Kirby's Adventure, the next you're displacing germs in Dr Mano. You might have to kill a set number of goombas in Super Mario Bros 3 or outrace boos in Zelda Il: The Adventure Of Link. The sheer amount of variety on offer is extremely satisfying, while the fast-paced nature of the gameplay adds to the overal manic pace that NES Remix 2 plays at

In addition to games based around popular classics, there are also a large number of remixed version to tackle

that take a section of a classic game and greatly change how it plays, so you might be controlling three Marios and attempting to reach the exit in Super Mano Bros 3, or collecting a set number of coins while controlling Link. As with the normal mini-games a three-star score rating is used, with the third, final star being quite difficult to achieve. The Remix levels are predictibly far tougher than those found in the core games, but they never feel unfair

In terms of the core games Punch-Out!!, Metroid, Kirby's Adventure, Super Mano Bros 2 and Super Mano Bros 3 fare the best, but even the likes of Ice Hockey and NES Open Tournament Gold feel better structured, as if Nintendo has really put thought into how each mini-game can be approached. Unlocking of new games and remixed levels is handled nicely. while the obligatory stamps are also available so you can show off how well you're doing on MilVerse. There are only 12 games in total, but the sheer amount of challenges will keep you busy for some time to come

Longevity is also assured thanks to the new online leaderboards that have

. (Wir U) In Super Luigi Bros you move from

been included, while Nintendo has also included a rather spiffy Championship Mode, which is based on the famous Nintendo World Championships, You can also share videos of your best plays and get a full game in the form of Super Luigi Bros, which identically mirrors the onginal NES classic.

NES Remox 2 is a great update that fixes many of the first game's issue We'd love a SNES Remix next please.

>> OTHER HIGHLIGHTS

Trials Fusion

- System: Xbox One (tested). PS4. PC
- Buy it for: £15.99

starting to wear a utile thin.

Buy it from: Xbox Live, PSN, Steam, U-Play The big new addition to the Trials franchise is the ability to use ATVs and the integration of tricks. While the ATVs add some much needed variety, thanks to their solid, weighty physics, the tricks feel a little too intrusive, taking away from the precision that has made past games in the senes. so popular it still works fantastically well thanks. to solid online integration and deverty designed tracks, but the core formula is 78%

Putty Squad

- » System: PS Vita (tested), 3DS, PS4
- Buy it for: £1999
- Buy it from: Online, retail.
- Well this is nice, a HD update that improves on. its predecessor. While the frame rate initiates. there's much to like about this Vita update Puttys. moves are spread across various buttons making. him easier to control, you now automatically absorb putties, while a new map makes the huge stages far easier to navigate. Longevity is offered. through a new challenge mode, while the ability to collect stickers will please any Eighties child.

Retro Game Crunch

- System: PC (tested), Mac
- Buy it for: £8.99
- Buy it from: Humbie Store
- This bundle of seven bite-sized games is: packed with variety, taking in genres from puzzier to beat-em-up, with highlights including evolution-therned platformer Super Clew Land and the puzzler End Of Line There's enough. good stuff here to ensure that anyone can get something out of the game - while the games are generally easier than the NES titles which inspired them, they re crafted with care and exhibit interesting ideas.

Mario Golf: World Tour

- » System: 3DS
- Buy it fon: £34.99
- Buy it from: Onune, retail, eShop.
- This might be the first Mano Golf game in a: decade, but fans of previous versions will feel night. at home here. It's not without problems, though, Unlockable content is integrated poorly with the main single-player mode, and with the exception. of Mano Kart-style terms the game exhibits little rangeation compared to past games in the senes. its still worth your time however, as the arcadestyle take on golf is as fun and accessible as ever.

It appears that there's no escape from the norwlarity

that there's no escape from the popularity of Flappy Bird, with numerous homebrew developers just itching to create their own infamous version. Won't someone think of the children!

HITCHCOCK WOZ 'ERE

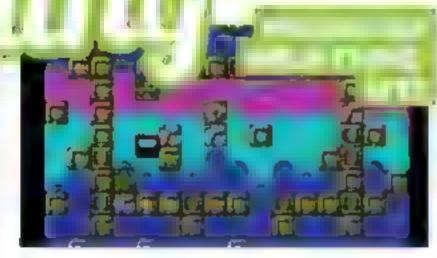

t the moment we feel a little like Tippi Hedren. Last issue we reported on three 'demakes' of popular if maddeningly frustrating iOS game Flappy Bird for the C64, ZX81 and Atari 8-bit, only to turn around and find ourselves completely surrounded by the little devils! At the time of writing we're aware of 19 flavours now including a second C64 iteration from seasoned developer Roy Fielding who was interviewed in Retro Gamer a few issues back, some 3D red screen action on the Virtual Boy, a TI-99/4A conversion which arrived unexpectedly from the incredibly prolific Rasmus Moustgaard and the more than slightly bizarra Jet Pilot Rising on the SNES which replaces the feathered star with a Cat which has been strapped to a rocket
The Spectrum and SNES are currently
joint leaders of the pack and boast three
releases each, although one of the
Spectrum games may not count since
it's a text adventure entered into the
annual Comp Sys Sinclair Crap Game
Competition. No really

Much as we love this rush of releases, it has left us with something of a dilemma; in order to review all of them we'd need to use at least two issues' worth of Homebrew space – and that's only assuming there aren't going

to be any more flying over to join the flock – but if we only deal with some there are bound to be people out there bemoaning the lack of coverage for their respective platforms. So we're going to try covering all of the bases by compiling a list of links to the clones and variants out there and as we're made aware of new versions we'll add them as we'll the URL for that list is Kikstart.eu/ flappy-index and after this issue we're only going to cover the new instalments which do something exceptional with the format

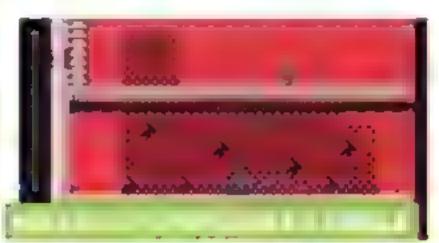

The Spectrum and SNES are joint leaders with three releases each

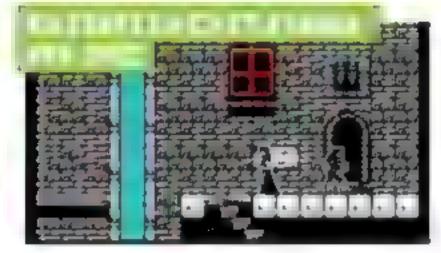

There's some interesting ports this month, including Mega Man and Castlevania

A Fun but taxing indie puzzler Ninja
Twins has been converted to the
Spectrum and given new level data

▼ There are previews of multiple levels now, so the conversion of Mega Man for the Amiga should be here soon.

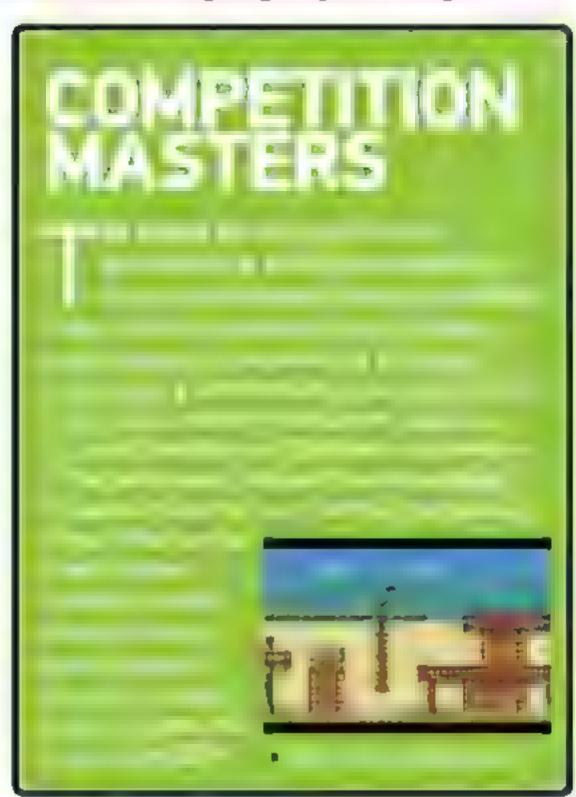

Another conversion that is hopefully on its way soon is Castlevania for the Spectrum – check it out

NO FLAPPING, OR BIRDS

but skipping over the titular avians entirely for a moment, there's a new version of Copter Game which was grammed into a mere 256 bytes and targeted at DOS-based PCs and users with more current hardware running DOSBox. We found it pretty finicky to get going but HeliCave seems to be faithful to the original and is less frustrating to actually play than the various Flappy games as well. Kikstart eu/helicavedos goes to the Pouetinet page for a download and some notes about getting the game running

▼ Atan ST exclusive Oids is a little less exclusive after programmer Meynaf modified it to run on the Amiga

This issue we're talking to Michael Gibs about his Amiga iteration of Flappy Bird to find out why it seems to be a magnet for programmers right now and what could be redesigned

What initially drew you to the game Flappy Bird as a possible Amiga project?

co-workers had shown me this game, telling me they thought it was crappy. I said, 'okay but are you able to code it?' As IT people, they answered with an unsure 'yes' so to challenge them I said 'okay, choose the platform and the language of your choice and let's do it.' And to this day, I still haven't seen even a pixel from their version.

And just how difficult was it to convert from the smartphone game to an Amiga?

Dong Nguyen did the onginal game in three days. As I work during the day, I did it in three evenings instead and it was pretty easy. First I had to code the gravity – the sprite was a 17x12 pixel white box at this point – then I drew the graphics and got the objects moving, then the collision detection and finally some code optimisation. There are some videos that I was sending to my friends during the development on YouTube – Kikstart eu/flappy-amiga-video.

You've kept the design very close to the original iOS game,

but were you tempted to redesign it at all?

Of course... I have seen some funny videos, but I decided to do the original game first. Then maybe a sequel

So what sort of thing would you be putting into Flappy Bird 2 then?

I'm not sure at the moment
But if you really want to know
the idea I have in mind at the
moment, it would be Flappy
Joyride, a mix of Flappy Bird and
Jetpack Joyride for the fun of it

And with hindsight, is there anything you feel could have been done differently?

One month after the release I decided that I would have coded it differently to make it run like

it is on a stock Amiga 500 But, my main Amiga has a 68060 running at 60MHz and I thought I could adapt it!

And can you tell our readers what projects you are planning to work on next?

I need to finish Snaky, a snake game. I have started it with Yoz Montana, the guy who designed the beautiful black Amiga cases that were available to buy on the now defunct Commodore USA website. I also need to release an update for Tiny Launcher, a game launcher program I have coded for the Amiga. I have four other games in mind and I will have a try at a version of Flappy Bird for the Amiga 500

Emell REVIEWS

PULSE

FORMAT: COMMODORE VIC-20 DEVELOPER: SVEN MICHAEL KLOSE DOWNLOAD: KIKSTART EU, PULSE VIC - PRICE, FREE

The world is under attack, this time by aliens that have started rocking up from somewhere in the 20th dimension. While we suspect that most readers have already guessed where this 'story' is going, for those who aren't familiar with shoot-'em-up plots the solution always involves a brave pilot with a small but manoeuvrable spaceship, some truly ridicultains amounts of firepower which can be boited on from weapon crates. dropped by destroyed enemies and a smooth, horizontally-scrolling landscape. And it's that last point which is the unexpected element. of Pulse, because getting any kind of smooth scroll out of an unexpanded VIC-20 is pretty difficult to do and having a raging battle taking place within that scrolling landscape even harder still

That said, Pulse is a somewhat limited game as far as shoot-'em-ups go; there's only the one level which has what appear to be randomly placed ground-based cannons and strings of airborne. nasties attacking the player craft. This lack of vanety will be down to the available memory - and in part the overheads required to handle that scrolling and all those software sprites - but it is the second sec mean that there isn't much in the way of longevity since there's nothing to play for in the long term apart from score. Of course that doesn't make Pulse a bad game and we enjoyed the unatternal carnage, it's just a bit more limited than we were hoping for when the preview was originally brought to our attention.

This appears to be something of a proof of concept, a testing of the water to see what the VIC-20 is and indeed isn't capable of; that would explain why it isn't perfect technically - there's quite a bit of flickering and enemies sometimes spawn partially behind the landscape - so, hopefully, means that there's a sequel on the way. In the meantime, it does become repetitive but fans

of the genra who can 'zone out' should enjoy themselves and this is a milestone for the VIC which hopefully will lead to bigger and better things

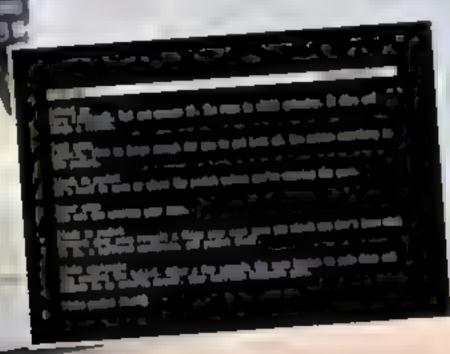

We enjoyed the unabashed carnage

This month, Jason gives you some handy tips for creating your very own text adventures

Some 8-bit machines like the Commodore 128, Amstrad CPC series or BBC Micro have an 80-column text mode which is great for text adventures, because it means that more information is available to the player at once; for example here's an Amstrad CPC example

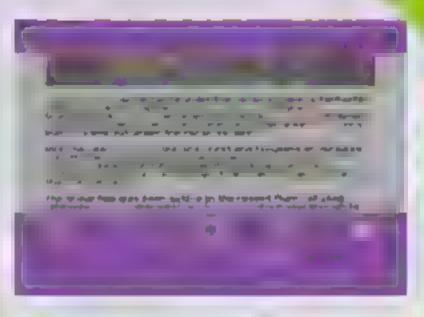

But for those machines without the hardware option it's possible to either write custom text handling or use existing solutions, which place two 4x8 pixel characters into a single 8x8 pixel 'cell'. This doubles the character count

Another option is to have variable widths to the letters - so lis thinner than A while W is wider - and the print routine then has to pre-shift each letter before drawing it. This neater but more complicated solution can be seen in Cometfall for the VIC-20

Although the routines haven't been used in a game so far, there are some disk magazines from the demo scene that handle variable width characters and can have words or sentences highlighted in different colours

2048

FORMAT: MEGA DRIVE DEVELOPER: OFRG864 DOWNLOAD: KIKSTART EU/2048-MEGADRIVE PRICE: FREE

The task set by 2048 seems to be simple; there's a 4x4 grid containing numbered tiles that will merge together when two with the same number collide, producing one tile with double the value. New tiles are added each move and the D-pad slides the tiles currently on screen in one of four directions. The final target is a quite daunting 2,048, which is built from two 1,024s which in turn need a couple of 512s each, so managing the 16-ble playfield to get to that point without it fisling up is where the challenge lies

The graphics have been kept simple because they don't really need to be complicated – although we have seen a fun Doctor Who regeneration-themed version

online – but the in-game soundtrack is very nice indeed and the gameplay is engrossing, surprisingly so considering how simple the initial premise seems

HIRES PACMAN

FORMAT-SINCLAIR ZX81 DEVELOPER: BRIAN LEWIS DOWNLOAD: KIKSTART EU/PACMAN-ZX81 PRICE: FREE

The ZX81 already has a few renditions of Pac-Man to its name, including Bob Smith's role-reversing One Little Ghost, but this latest one from developer Brian Lewis is a little different. Rather than just using the ZX81's ROM characters to build Paccy,

the ghosts and their environment it instead renders everything as high-resolution graphics, all without equiting anything more than a RAM expansion

The results are impressive and, although there's quite a bit of artefacting – which is more pronounced in static screenshots than when moving – and it does flicker, we feel it can be forgiven since *Hires Pacman* plays well. The most common place where clones fail is the enemy movement, but the ghosts here are well programmed.

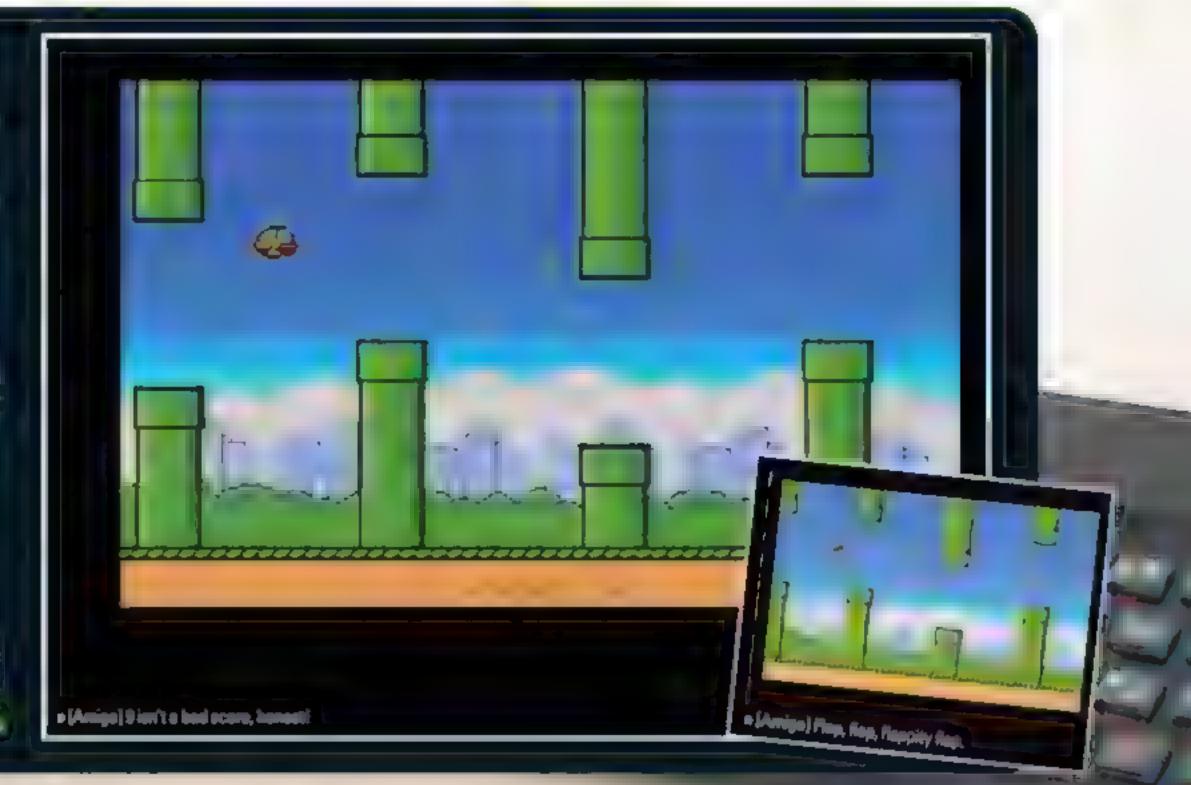

FLAPPY BIRD

» FORMAT: COMMODORE AMIGA » DEVELOPER: MICHAEL GIBS » DOWNLOAD: KIKSTART.EU/FLAPPY-AMIGA » PRICE: FREE ***

Another day, another rendition of Flappy Bird and, since this one is running on the Amiga, it's even closer to the iOS original visually and indeed aurally than the C64 conversion we took a look at last month. And it won't come as much of a surprise that the player takes control of a cutesy bird as it navigates carefully through a series of Mariostyle pipes and must try to balance upwards thrusts caused by pressing the space bar, left mouse or joystick fire button against the effects of gravity.

If the timing of those button presses is right the bird will bounce less than gracefully through the air between obstacles, but getting it wrong is fatal and sees birdie plummet beak first straight into the ground below, it's punishing, unforgiving and guaranteed to drive most players completely up the wall. Here's hoping homebrew developers remember there are other games to draw inspiration from

CANCE OF STREET

Every month, one lucky writer in will receive a copy of our latest eMag, Retro Gamer Load 3, a bargain if ever there was one

ANALYS AND DESCRIPTION OF TAXABLE PARTY.

Dear Retro Gamer,

In your Movie Licence Awards feature, you award GoldenEye with the 'Best Picture' award. You describe modern features that the game lacks, such as dual analogue control. To my knowledge, GoldenEye was actually the first FPS to support dual-stick controls. You had the capability of wielding two controllers for the single player mode, allowing you to control the game exactly like you would in more modern shooters. This capability was carried on into GoldenEye's sequel, Perfect Dark as well. That's one of rny favourite things about the game I also have to say that you look pretty badass controlling the game with two N64 controllers. I've confused many roommates who have walked in on me doing just that

Cheers

You've definitely caught us out there! We still think the game benefits more from a dual-stick controller as used on modern consoles – when we tried it via emulation, the ability to access shoulder buttons and the sticks at the same time proved quite handy.

Hi RG1

Just a quick email to join the Star Force love-in. We had a cabinet at the

[Arcade] Jon Hughes has fond memories of Star Force did you ever have arcade machines at university or work?

University of Leicester Gilbert Murray
Hall when I was there in '91-'92. Bossing
the high score was a year-long event
with my good friend at the time Matt
Pierce (who later became editor of PC
Gamer) going toe-to-toe with one of
the Cypnot students and a guy from the
common room. We loved the game, and
Cabal when we had that on-site later on

Anyway keep up the good work. I'm starting to think you should be funded by the government for the historical service you are now providing for digital games

It seems there's quite a bit of love for Star Force! Universities can be surprisingly good places to find arcade cabinets – the students' union games room at the University

STAR LETTER

TIME CRISIS

Dear Retro Gamer,

lam a 32-year-old sales manager with a wife, four children and a big mortgage. But I'm an avid gamer, specifically retro. Brought up on Eighties consoles and living through the golden period of gaming in the Nineties, I have been spoiled with some of the best and most memorable events in gaming history.

One of my biggest pitches to others for why I love playing retro games in their native form and using a CRTTV was always that you take time out of your day to set it up, thus it becomes a cherished event as opposed to a quick np via MAME. Also, I have moaned in the past about how easy games have become. In the past you had to earn the right to complete a game – no YouTube, no infinite continues, no save points

a slice of humble pie. Because of my hectic lifestyle (like most of us in our 30s and 40s), I don't have time to take consoles out of boxes and set up CRT's anymore and when I do play, my play time is very unpredictable and inconsistent (kids ...). Because of these factors, I now welcome third-party peripherals like the RetroN and constant save points in games

It's funny that the things I always hated about videogaming are now the things that allow me to keep on playing the games I love. Oh, the irony¹

Kind regards,

You're certainly right, gaming can be a hard hobby to balance with a busy family life and career. While we're all for authenticity, we welcome any developments that allow more people to enjoy retro games, no matter how little time they might have – and we're glad to see you do too.

of Essex used to feature the likes of Street Fighter Alpha 2, The House Of The Dead and Time Crisis II, and even a couple pinball tables. Sadly, those were cleared out and the space they used to occupy now contains an international food shop and a hairdresser. Talk about doing it wrong...

Hola from Cozumel¹

Back in issue 109 I was featured in your Mailbag section after taking a picture of me enjoying a Retro Gamer way more than sights of the Acropolis ruins right behind me during my honeymoon. Wouldn't you know it, same thing happened while vacationing in Cozumel, Mexico (vacation, not

honeymoon). Since subscribing in 2010, I've made sure to always have at least one issue on me when travelling. You guys consistently publish top notch gaming journalism month to month and travelling just isn't fun if I'm not poring through your Back To The Eighties/ Nineties sections (my favourite)

Look forward to more pictures of me completely ignoring my surroundings while reading **Retro Gamer**!

It's nice to see the magazine being enjoyed in another fine location! We feel that the team should be enjoying the same amount of sun, so we're drawing up a new plan – Retro World Tour, in which we find developers in exotic locations

Remember when publishers: would slop a new soundtrack on a Maga Drive game and call ita Muga-CD game?We've been morning about the transi of remestoring last year's 🧸 🤻 hits fernew conseles. The games ero still grant, but are the upgrades worth full-price

 Robert Leanard's holiday phops continue to make us green with envy. Have you enjoyed **Notice Gartier** A 1 4 1 1 1 1

exotic?

and fly out to interview them for about a week each. Sadly though, we expect that this rather blatant attempt to biag free holidays would be quickly explosed.

Dear Retro Gamer,

The recent Retro Gamer article on the brilliant Knights Of The Sky reminded me why modern simulations are often so restrictive - they are too mission onentated! When one is completed we simply move onto the next on the list

I have fond memones of the C64 game ACE. Air Combat Emulator and the Amiga version of Silent Service and its terrific sequel, which allowed us to roam freely across the land and sea for as long as fuel and ammunition allowed. We could go anywhere and attack anything. In the case of Silent Service encounters were randomised ensuring each game was unique

Although I am still fond of the odd flight simulator and have clocked up countless hours on the PS3 conversion. of Birds Of Steel, I often yearn for that Elite-style gamepiay experience where missions can be accepted in a totally open-ended world. If titles such as Red Dead Redemption and the Elder Scrolls franchise can manage it successfully, then why not simulation games?

We're hoping that the forthcoming Elite: Dangerous will restore some enthusiasm for this type of game in both players and developers, because we've been trying to think of similarly open-ended simulators on modern platforms and have come up short. You're quite right, as taking a spin in a game in any type of vehicle without a care in the world is always great fun.

[C64] Stuart Hardy longs for the days of freeform simulation games like ACE and Knights Of The Sky.

Every month, Retro Gamer asks a question on the forum and prints the best replies. This month we wanted to know...

ArchaicKoela

The earliest memory of this for me probably goes to Granny's Garden - the map section where if you did things in the wrong order the witch would catch you

TwoHeadedBoy

That barrel going up and down in Camival Night Zone in Sonic 3. Stupidly easy to solve in retrospect, but we were the first ones in school to get past it, so everyone was asking us what ice Cap and Launch Base were like

RetroAerosmith

I'll say one of the mine cart levels in Dankey Kong Country on the SNES. Usually when the cart

was going uphili and there would either be a stray rock or bit of track you had to triple jump over the frustration of watching as instead of a super jump you did a trny leap and ded.

ioefish

Penetrator on the Spectrum you get to the fifth level, fly over a volcano with some targets at the bottom, and then the cave log and bottom come together in an impossibly bight space you. can't get through. What the hell? Turns out, you're supposed to drop a bornib straight down that column and hit those targets at the bottom to ingger a congratulations. message, then you return to the

game with a mirrored landscape. to fly out again.

SirClive

Final Fantasy VII 45 hours into the game and I got to the fight against Proud Clod, I didn't do enough levelling up before hand and there is no way to back out of the fight. That is just too much time to ever repeat so I doubt I will ever get to finish the game lunless we get the PS4 remake that I am dreaming of)

merman

Bruce Lee on the C64, for years I got stuck on the penultimate screen. Turns out the version I was playing was corrupted

EMIDGAME

JUNGLE STRIKE

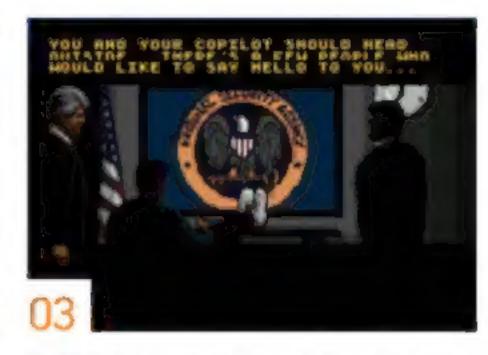

» Life is hard when you're an expert helicopter pilot. Having vanquished the villainous General Kilbaba in the first game, you thought you were entitled to a bit of rest. No such luck – Ibn Kilbaba, black market arms dealer and son of the deceased warlord, has teamed up with the notorious drug lord Carlos Ortega and plans to blow up Washington DC with nuclear weapons. Get back to the chopper...

Having thwarted a last-ditch escape attempt by the villains of the piece, our pilot is thanked by his commanding officer. Our pilot decides to remind us that he's a jerk as well as a hero by arrogantly brushing him off.

Bill Clinton himself begins to weigh in with the praise, telling our man that he has prevented an unelected madman from exercising power over the free world. But the pilot is no politics junkie, and responds with little enthusiasm.

He's beaten the bad guys and been rude to both his boss and his president
the pilot is on a roll and has almost finished his journey. But there's one more task left unfinished, so his boss ushers him outside...

This is it – the victory parade. The pilot isn't in this for the praise of his superiors, and he certainly doesn't care about the ideological struggles of his government. What the pilot wants is a sports car, cheering crowds and TV interviews – and now he's got them all. Mission accomplished.

Lastly, the teaser for a sequel. Is it the end? As it turned out, it wasn't. After abandoning work on Postal Strike, a sequel which was to take a drastic left turn by covering labour relations in the US Postal Service, Electronic Arts concluded the 16-bit trilogy with Urban Strike.

Alternative Software Presents

"The greatest cricket game of all-time"

Intuitive controls that allow for line and length deliveries without pitch markers and realistic shot control when batting.

Take a 16 year old aspiring cricketer through the ranks to international glory in career mode.

Fully customise your play experience, setup tours, competitions, create players, teams and even umpires in the Cricket Academy.

Access thousands of Community created players and teams, ready for download and use in the game.

Hone your skills to perfection in the Practice Nets before taking to the field.

Dynamic time of day, weather and pitch wear that will keep you on edge, as no two matches play the same.

Continue your match whenever you want with the unique Online Save System.

The most realistic physics ever seen in a Cricket game including thin edges, bat pad catches, intimidating bouncers and much more.

Available NOW from all good video game stockists, including:
